Important

Read, understand and obey these safety rules and operating instructions before operating this machine. Only trained and authorized personnel shall be permitted to operate this machine. This manual should be considered a permanent part of your machine and should remain with the machine at all times. If you have any questions, call Genie.

Safety Rules

Danger

Failure to obey the instructions and safety rules in this manual will cause death or serious injury.

Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator's manual.

1 Avoid hazardous situations.
Know and understand the safety rules before going on to the next section.

2 Always perform a pre-operation inspection.

3 Always perform function tests prior to use.

4 Inspect the workplace.

5 Only use the machine as it was intended.

☑ You read, understand and obey the manufacturer's instructions and safety rules—safety and operator's manuals and machine decals.

☑ You read, understand and obey employer's safety rules and worksite regulations.

☑ You read, understand and obey all applicable governmental regulations.

☑ You are properly trained to safely operate the machine.

☑ The first time this machine is set up for use, a breather cap is installed. See Pre-operation Inspection section.
SAFETY RULES

Electrocution Hazards

This machine, even with an optional fiberglass platform, is not electrically insulated and will not provide protection from contact with or proximity to electrical current.

Keep away from the machine if it contacts energized power lines or becomes electrically charged. Personnel on the ground or in the platform must not touch or operate the machine until energized power lines are shut off.

Maintain safe distances from electrical power lines and apparatus in accordance with applicable governmental regulations and the following chart.

<table>

Allow for platform movement, electrical line sway or sag and movement due to strong or gusty winds.

Do not use the machine as a ground for welding.

Do not operate an AC powered machine or a DC battery charger unless using a 3-wire grounded extension cord connected to a grounded AC circuit. Do not alter or disable 3-wire grounded plugs.

Tip-over Hazards

Do not raise the platform unless the base is level, all four outriggers are properly installed and the leveling jacks firmly contact the floor.

Do not adjust or remove the outriggers while the platform is occupied or raised.

Do not move the machine while the platform is raised.

Do not place ladders or scaffolds in the platform or against any part of this machine.

Do not place or attach overhanging loads to any part of this machine.

Do not transport tools and materials unless they are evenly distributed and can be safely handled by the person in the platform.
SAFETY RULES

Do not raise the platform unless the machine is level. Do not set the machine up on a surface where it cannot be leveled using only the leveling jacks.

Do not cause a horizontal force or side load to the machine by raising or lowering a fixed or overhanging load.

Do not push off or pull toward any object outside the platform.

**Maximum allowable side force**
- ANSI / CSA
  - 50 lbs / 222 N

**Maximum allowable manual force**
- CE / AUS
  - 45 lbs / 200 N

Do not operate the machine near drop-offs, holes, bumps, debris, unstable or slippery surfaces or other possible hazardous conditions.

Do not alter or disable machine components that in any way affect safety and stability.

Do not replace items critical to stability with items of different weight or specification. Use only Genie authorized replacement parts.

Do not push the Genie AWP from the platform side of the machine.

When moving the machine with a forklift or other transport vehicle, the platform should be fully lowered, the machine should be turned off and no personnel shall remain in the platform.

Do not use the machine on a moving or mobile surface or vehicle.
SAFETY RULES

ANSI / CSA models: Do not raise the platform when wind speeds may exceed 28 mph / 12.5 m/s. If wind speeds exceed 28 mph / 12.5 m/s when platform is raised, lower the platform and do not continue to operate the machine.

CE/AUS standard base models with outdoor outriggers: Do not raise the platform when wind speeds may exceed 28 mph / 12.5 m/s. If wind speeds exceed 28 mph / 12.5 m/s when platform is raised, lower the platform and do not continue to operate the machine.

CE/AUS standard base models with indoor outriggers: Indoor use only. Do not raise the platform when wind speeds may exceed 0 mph / 0 m/s. If wind speeds exceed 0 mph / 0 m/s when platform is raised, lower the platform and do not continue to operate the machine.

CE/AUS Narrow or RT base models: Indoor use only. Do not raise the platform when wind speeds may exceed 0 mph / 0 m/s. If wind speeds exceed 0 mph / 0 m/s when platform is raised, lower the platform and do not continue to operate the machine.

Maximum occupancy 1 person

Fall Hazards

The guard rail system provides fall protection. If occupants of the platform are required to wear personal fall protection equipment (PFPE) due to job site or employer rules, PFPE equipment and its use shall be in accordance with the PFPE manufacturer’s instructions and applicable governmental requirements. Attach the lanyard to the anchor provided in the platform.

Do not sit, stand or climb on the platform guard rails. Maintain a firm footing on the platform floor at all times.

Do not operate the machine in strong or gusty winds. Do not increase the surface area of the platform or the load. Increasing the area exposed to the wind will decrease machine stability.

Occupants, equipment and materials shall not exceed the maximum platform capacity.
SAFETY RULES

Do not exit the platform while raised. If a power failure occurs, have ground personnel activate the manual lowering valve.

Keep the platform floor clear of debris.

Lower the platform entry mid-rail or gate before operating.

Improper Use Hazard
Do not leave the machine unattended unless the key is removed to secure from unauthorized use.

Bodily Injury Hazard
Do not operate the machine with a hydraulic oil or air leak. An air leak or hydraulic leak can penetrate and/or burn skin.

Explosion and Fire Hazard
Do not operate the machine or charge the battery in hazardous locations or locations where potentially flammable or explosive gases or particles may be present.

Damaged Machine Hazards
Do not use a damaged or malfunctioning machine.

Be sure all maintenance has been performed as specified in this manual and the Genie AWP Super Series service manual.

Be sure all decals are in place and legible.

Be sure the operator’s, safety and responsibilities manuals are complete, legible and in the storage container located on the platform.

Conduct a thorough pre-operation inspection of the machine and test all functions before each work shift. Immediately tag and remove from service a damaged or malfunctioning machine.

Do not use the machine as a ground for welding.

Collision Hazards
Operators must comply with employer, job site and governmental rules regarding the use of personal protective equipment.

Check the work area for overhead obstructions or other possible hazards.

Be aware of crushing hazard when grasping the platform guard rail.

Do not lower the platform unless the area below is clear of personnel and obstructions.

Use common sense and planning to control the movement of the machine on or near inclines.

Stay clear of descending platform.
Battery and Charger Safety - DC Models

Burn Hazards

Batteries contain acid. Always wear protective clothing and eye wear when working with batteries.

Avoid spilling or contacting battery acid. Neutralize battery acid spills with baking soda and water.

The battery pack must remain in an upright position.

Explosion Hazards

Batteries emit explosive gas. Keep sparks, flames and lighted tobacco away from the battery.

Charge the battery in a well-ventilated area.

Do not disconnect charger DC output wires from the battery when the charger is on.

Electrocution Hazards

Connect the charger to a grounded AC circuit only.

Do not expose the battery or charger to water or rain.

Before each use, inspect for damage. Replace damaged components before operating.

Lifting Hazard

The battery pack weighs 90 lbs / 40.8 kg. Use the appropriate number of people and proper lifting techniques when lifting the battery pack.
Decal Legend

Genie product decals use symbols, color coding and signal words to identify the following:

- **Safety alert symbol**—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

- **Red**—used to indicate the presence of an imminently hazardous situation which, if not avoided, will result in death or serious injury.

- **Orange**—used to indicate the presence of a potentially hazardous situation which, if not avoided, could result in death or serious injury.

- **Yellow with safety alert symbol**—used to indicate the presence of a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

- **Yellow without safety alert symbol**—used to indicate the presence of a potentially hazardous situation which, if not avoided, may result in property damage.

- **Green**—used to indicate operation or maintenance information.

Pre-operation Inspection

Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator’s manual.

1 Avoid hazardous situations.

2 Always perform a pre-operation inspection.

Know and understand the pre-operation inspection before going on to the next section.

3 Always perform the function tests prior to use.

4 Inspect the workplace.

5 Only use the machine as it was intended.

Breather Cap - AC & DC Models

Component damage will occur if the machine is operated without a breather cap. Check to make sure the breather cap is in place in the hydraulic reservoir.

The first time this machine is set up for use, the pipe plug in the hydraulic reservoir must be removed and permanently replaced with a breather cap.

A breather cap is supplied and can be found in the manual storage box.

Fundamentals

It is the responsibility of the operator to perform a pre-operation inspection and routine maintenance.

The pre-operation inspection is a visual inspection performed by the operator prior to each work shift. The inspection is designed to discover if anything is apparently wrong with a machine before the operator performs the function tests.

The pre-operation inspection also serves to determine if routine maintenance procedures are required. Only routine maintenance items specified in this manual may be performed by the operator.

Refer to the list on the next page and check each of the items.

If damage or any unauthorized variation from factory delivered condition is discovered, the machine must be tagged and removed from service.

Repairs to the machine may only be made by a qualified service technician, according to the manufacturer's specifications. After repairs are completed, the operator must perform a pre-operation inspection again before going on to the function tests.

Scheduled maintenance inspections shall be performed by qualified service technicians, according to the manufacturer's specifications and the requirements listed in the responsibilities manual.
Pre-operation Inspection

- Be sure that the operator’s, safety and responsibilities manuals are complete, legible and in the storage container located on the platform.
- Be sure that all decals are legible and in place. See Decals section.
- Check for battery fluid leaks and proper fluid level. Add distilled water if needed. See Maintenance section.
- AC & DC models: Check for hydraulic oil leaks and proper oil level. Add oil if needed. See Maintenance section.
- RT base models: Check for proper tire pressure. Add air to tires if needed. See Maintenance section.
- Air models: Check the oil level of the airline lubricator. See Maintenance section.
- Air models: Check the oil lubricator canister drip rate. Adjust as needed. See Maintenance section.
- Air models: Check the air filter/regulator canister. Drain water as needed. See Maintenance section.

Check the following components or areas for damage, improperly installed or missing parts and unauthorized modifications:

- Electrical components, wiring and electrical cables
- AC & DC models: Hydraulic power unit, hoses, fittings and cylinder
- Air models: Air power unit, air lines, fittings and cylinder
- Platform entry mid-rail or gate
- Sequencing cables and pulleys
- Lifting chains and idler wheels
- Nuts, bolts and other fasteners
- Mast columns and counterweight
- Breather cap
- Outriggers, leveling jacks and footpads
- Adjustable glide pads
- Lanyard anchorage points
- Casters and brakes (if equipped)

Check entire machine for:

- Dents or damage
- Corrosion or oxidation
- Cracks in welds or structural components
- Inspect and clean battery terminals and all battery cable connections.
- Be sure that all structural and other critical components are present and all associated fasteners and pins are in place and properly tightened.
Maintenance

Observe and Obey:

☑ Only routine maintenance items specified in this manual shall be performed by the operator.

☑ Scheduled maintenance inspections shall be completed by qualified service technicians, according to the manufacturer’s specifications and the requirements specified in the responsibilities manual.

☑ Dispose of materials in accordance with governmental regulations.

Maintenance Symbols Legend

The following symbols have been used in this manual to help communicate the intent of the instructions. When one or more of the symbols appear at the beginning of a maintenance procedure, it conveys the meaning below.

![Tool Icon] Indicates that tools will be required to perform this procedure.

![Part Icon] Indicates that new parts will be required to perform this procedure.

Check the Battery - DC Models

Proper battery condition is essential to good machine performance and safe operation. Improper fluid levels or damaged cables and connections can result in component damage and hazardous conditions.

![Warning Icon] Electrocuton hazard. Contact with hot or live circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

![Warning Icon] Bodily injury hazard. Batteries contain acid. Avoid spilling or contacting battery acid. Neutralize battery acid spills with baking soda and water.

![Notice Icon] Perform this test after fully charging the battery.

1. Put on protective clothing and eye wear.

2. Remove the battery vent caps.

3. Check the battery acid level. If needed, replenish with distilled water to the bottom of the battery fill tube. Do not overfill.

4. Install the vent caps.
Check the Hydraulic Oil Level

Maintaining the hydraulic oil at the proper level is essential to machine operation. Improper hydraulic oil levels can damage hydraulic components. Daily checks allow the inspector to identify changes in oil level that might indicate the presence of hydraulic system problems.

1. Be sure the platform is fully lowered.
2. Check the sight gauge on the side of the hydraulic reservoir.

Result: The hydraulic oil level should be visible in the middle of the sight gauge. Do not overfill.

Hydraulic oil specifications

<table>
<thead>
<tr>
<th>Hydraulic oil type</th>
<th>Chevron Rando HD equivalent</th>
</tr>
</thead>
</table>

Check the Air Line Lubricator Oil Level - Air Models

Maintaining the proper oil level in the lubricator canister is essential to safe operation and good machine performance. Failure to keep the lubricator canister at the proper oil level could result in unsafe operating conditions and possible component damage.

1. Be sure the platform is fully lowered.
2. Inspect the lubricator canister for the proper oil level.

Result: The oil level must be within ½ inch / 12.7 mm from the top of the lubricator canister.

3. To add oil, remove the oil lubricator canister from the lubricator base and fill with oil. Install the canister back onto the lubricator base.

Oil Specifications

<table>
<thead>
<tr>
<th>Oil Type</th>
<th>10W automotive engine oil</th>
</tr>
</thead>
</table>

Check the Tire Pressure - RT Base Models

It is essential to maintain proper pressure in all air-filled tires. Improperly inflated tires can affect machine handling.

1. Check each tire with an air pressure gauge. Add air as needed. The proper air pressure is stamped on the tire.
MAINTENANCE

Check the Oil Lubricator Canister Drip Rate - Air Models

Maintaining the proper oil drip rate into the lubricator canister is essential to safe operation and good machine performance. Failure to maintain the proper drip rate could result in machine component damage.

1. While raising the platform, visually inspect the oil lubricator sight gauge.
2. To adjust the drip rate, turn the oil flow control valve clockwise to decrease the flow or counterclockwise to increase the flow.
3. Repeat this procedure until the proper oil drip rate is achieved.

Check the Air Filter/Regulator Canister - Air Models

It is essential to drain the air filter/regulator canister of water to ensure good air motor performance and service life. A water-filled canister could cause the air motor to perform poorly and continued use could cause component damage.

1. Check the air filter/regulator canister for any water accumulation.
2. If water is visible, loosen the drain plug at the bottom of the canister and allow the water to drain out.
3. Tighten the drain plug.

Scheduled Maintenance

Maintenance performed quarterly, annually and every two years must be completed by a person trained and qualified to perform maintenance on this machine according to the procedures found in the service manual for this machine.

Machines that have been out of service for more than three months must receive the quarterly inspection before they are put back into service.
Function Tests

Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator’s manual.

1 Avoid hazardous situations.
2 Always perform a pre-operation inspection.
3 Always perform the function tests prior to use.
4 Inspect the workplace.
5 Only use the machine as it was intended.

Fundamentals

The function tests are designed to discover any malfunctions before the machine is put into service. The operator must follow the step-by-step instructions to test all machine functions.

A malfunctioning machine must never be used. If malfunctions are discovered, the machine must be tagged and removed from service. Repairs to the machine may only be made by a qualified service technician, according to the manufacturers specifications.

After repairs are completed, the operator must perform a pre-operation inspection and function tests before putting the machine into service.
FUNCTION TESTS

Function Tests

Setup

1. Position the machine on a firm surface directly below the desired work area.

2. Connect to the appropriate power source:
   - DC models: Connect the battery pack.
   - AC models: Connect to a grounded 15A AC power supply. Use a 12 gauge / 3.3mm² 3-wire grounded extension cord no longer than 50 feet / 13 m.
   - Air models: Connect the air line.

3. Insert the key and turn to platform control.

4. Pull out the red Emergency Stop button to the on position at the ground controls.

5. Twist to release the red Emergency Stop button at the platform controls.

6. Select an outrigger and slide it into a base socket until the outrigger lock pin snaps into place. Adjust the outrigger to level the machine and raise the base casters slightly off the ground. Level the machine using only the outriggers.

7. Check the interlock display lights at the ground controls. Confirm that the corresponding light is on.

8. Repeat this procedure for each of the remaining outriggers.

9. Use the bubble level and adjust the leveling jacks until the machine base is level.

Test Emergency Stop

10. Push in the red Emergency Stop button at the ground controls to the off position.

11. Push in the control activate button and rotate the up/down switch in the direction of intended travel.

   Result: The up/down function should not operate.
12 Push in the red Emergency Stop button at the platform controls to the off position.
13 Pull out the red Emergency Stop button at the ground controls to the on position.
14 Push in the control activate button and rotate the up/down switch in the direction of intended travel.
   • Result: The up/down function should not operate.

**Test Outrigger Interlock**

15 Twist to release the red Emergency Stop button at the platform controls.
   • Result: The up/down functions should operate.
16 Unscrew one leveling jack until the corresponding interlock display light turns off.
   • Result: The up function should not operate.
17 Return the leveling jack to the previous setting and check the bubble level.
18 Repeat this procedure for each outrigger.

**Test Auxiliary Platform Lowering**

- **AC & DC Models**

19 Raise the platform slightly.
20 Disconnect the power source from the machine.
21 Turn the key switch to ground control.
22 Push in the auxiliary platform lowering button at the ground controls.
   • Result: The platform should lower.

23 Connect the power source to the machine.
24 Turn the key switch to platform control.
25 Raise the platform slightly.
26 Disconnect the power source from the machine.
27 Push in the control activate button and rotate the up/down switch in the down direction.
   • Result: The platform should lower.
28 Connect the power source to the machine.

**Test Manual Lowering**

29 Raise the platform slightly.
30 Activate the manual lowering valve located at the bottom of the hydraulic cylinder.
   • Result: The platform should lower.
**Workplace Inspection**

Be aware of and avoid the following hazardous situations:

- drop-offs or holes
- bumps, floor obstructions or debris
- slopes that exceed the machine’s leveling capability
- unstable or slippery surfaces
- overhead obstructions and high voltage conductors
- hazardous locations
- inadequate surface support to withstand all load forces imposed by the machine
- wind and weather conditions
- the presence of unauthorized personnel
- other possible unsafe conditions

---

**Do Not Operate Unless:**

You learn and practice the principles of safe machine operation contained in this operator’s manual.

1. Avoid hazardous situations.
2. Always perform a pre-operation inspection.
3. Always perform function tests prior to use.
4. **Inspect the workplace.**
   - **Know and understand the workplace inspection before going on to the next section.**
5. Only use the machine as it was intended.

---

**Fundamentals**

The workplace inspection helps the operator determine if the workplace is suitable for safe machine operation. It should be performed by the operator prior to moving the machine to the workplace.

It is the operator’s responsibility to read and remember the workplace hazards, then watch for and avoid them while moving, setting up and operating the machine.
Operating Instructions

Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator’s manual.

1 Avoid hazardous situations.
2 Always perform a pre-operation inspection.
3 Always perform function tests prior to use.
4 Inspect the workplace.
5 Only use the machine as it was intended.

Fundamentals

The Operating Instructions section provides instructions for each aspect of machine operation. It is the operator’s responsibility to follow all the safety rules and instructions in the operator’s, safety and responsibilities manuals.

Using the machine for anything other than lifting personnel, along with their tools and materials, to an aerial work site is unsafe and dangerous.

If more than one operator is expected to use a machine at different times in the same work shift, each operator is expected to follow all safety rules and instructions in the operator’s manual. That means every new operator should perform a pre-operation inspection, function tests and a work place inspection before using the machine.

Setup

1 Position the machine on a firm surface directly below the desired work area.
2 Connect to the appropriate power source:
   DC models: Connect the battery pack.
   AC models: Connect to a grounded 15A AC power supply. Use a 12 gauge / 3.3mm² 3-wire grounded extension cord no longer than 50 feet / 13 m.
   Air models: Connect the air line.
3 Insert the key and turn to platform control.
4 Pull out the red Emergency Stop button at the ground controls and twist to release the red Emergency Stop at the platform controls. Be sure the power light is on or the air pressure gauge reads 80-110 psi / 5.5 - 7.8 bar.
5 Install the outriggers and adjust to level the machine and raise the base casters slightly off the ground.
6 Be sure all four interlock display lights at the ground controls are on and all four outriggers are in firm contact with the ground.
7 Use the bubble level to make sure the machine is level.

Note: If adjustment is necessary, check the bubble level and interlock display again to make sure the machine is level and all four interlock display lights are on.
OPERATING INSTRUCTIONS

**Emergency Stop**

Push in the red Emergency Stop button at the platform controls or at the ground controls to stop the up function.

**Platform Raise and Lower**

1. Pull out the red Emergency Stop button to the on position at the ground controls. Twist to release the red Emergency Stop button at the platform controls.

2. Push in the control activate button and rotate the up/down switch in the desired direction of travel.

**Manual Lowering**

1. Activate the manual lowering valve located at the bottom of the hydraulic cylinder.

**Auxiliary Platform Lowering - AC & DC Models**

1. Turn the key switch to ground control. Pull out the red Emergency Stop button to the on position.

2. Activate the auxiliary platform lowering button at the ground controls.

**Fall Protection**

Personal fall protection equipment (PFPE) is not required when operating this machine. If PFPE is required by job site or employer rules, the following shall apply:

All PFPE must comply with applicable governmental regulations and must be inspected and used in accordance with the manufacturer's instructions.

**After Each Use**

1. Select a safe storage location—firm, level surface, weather protected, clear of obstruction and traffic.

2. Apply the caster brakes (if equipped) or chock the wheels to prevent the machine from rolling.

3. Remove the key to secure from unauthorized use.

4. DC models: Recharge the battery.
Battery Charging Instructions

To Charge Battery

1. Open the battery pack lid to access the battery.
2. Remove the battery vent caps and check the battery acid level. If necessary, add only enough distilled water to cover the plates. Do not overfill prior to the charge cycle.
3. Replace the battery vent caps.
4. Be sure that the DC output cord is properly connected to the battery. Black to negative, red to positive.
5. Connect the battery charger to a grounded AC circuit.
6. The charger will turn off automatically when the battery is fully charged.
7. Check the battery acid level when the charge cycle is complete. Replenish with distilled water to the bottom of the fill tube. Do not overfill.

Dry Battery Filling and Charging Instructions

1. Remove the battery vent caps and permanently remove the plastic seal from the battery vent openings.
2. Fill each cell with battery acid (electrolyte) until the level is sufficient to cover the plates.
   Do not fill to maximum level until the battery charge cycle is complete. Overfilling can cause the battery acid to overflow during charging. Neutralize battery acid spills with baking soda and water.
3. Install the battery vent caps.
4. Charge the battery.
5. Check the battery acid level when the charging cycle is complete. Replenish with distilled water to the bottom of the fill tube. Do not overfill.
Transport Instructions

Observe and Obey:

☑ Be sure the transport vehicle capacity and loading surfaces are sufficient to support the machine weight. See the serial label for the machine weight. Some pick-up truck tailgates are not strong enough to support the weight of the machine and may require reinforcement.

☑ Do not load the machine onto a transport vehicle unless it is parked on a level surface.

☑ The transport vehicle must be secured to prevent rolling while the machine is being loaded.

☑ The machine must be securely fastened to the transport vehicle. Use chains or straps of ample load capacity.

☑ Be sure to lock both swivel casters on the tilt-back frame.

☑ Do not transport with the machine resting on the tilt-back frame.

Lifting Instructions

The number of people required to load and unload a machine is dependent on a number of factors, including but not limited to:

- the physical condition, strength and disabilities or prior injuries of the people involved
- the vertical and horizontal distances the machine has to be moved
- the number of times the machine will be loaded or unloaded
- the stance, posture and grip used by the people involved
- the lifting techniques used
- the site conditions and weather in which the activity is being performed (i.e., slippery, icy, raining)

The appropriate number of people and proper lifting techniques must be used to prevent physical injury.
Loading for Transport

1. Fully lower the platform.
2. Push in the red Emergency Stop buttons, turn the key switch to the off position and remove the key.
3. Remove the outriggers from the base and place them in the storage sockets.
4. DC models: Disconnect the battery cable and remove the battery pack.
5. Inspect the entire machine for loose or unsecured items.
6. Slide the stop bracket to the top lock position.
7. Hook the loading pivot to the stop bracket.
8. Position the machine flush against the loading surface. Lower and lock the stop bracket to the lowest lock pin position above the loading surface.
9. All models with tilt-back frame:
   - Be sure both stop bracket lock pins are fully locked.
   - Be sure both tilt-back frame swivel casters are locked.
10. Slide out the T-handle until the lock pin snaps into place.
11. Lift the T-handle to tilt the machine onto the loading surface. Use the appropriate number of people and proper lifting techniques.
12. Carefully push the machine into the transport position.
13. Return the sliding T-handle to the stowed position.
15. Reverse this procedure to unload the machine.
TRANSPORT INSTRUCTIONS

Securing the Machine
Use chains or straps of ample load capacity.
Use a minimum of 2 chains.
Adjust the rigging to prevent damage to the chains.

Winching the Machine onto a Flatbed Truck
1. Fully lower the platform.
2. Push in the red Emergency Stop buttons, turn the key switch to the off position and remove the key.
3. Remove the outriggers from the base and place them in the storage sockets.
4. Inspect the entire machine for loose or unsecured items.
5. Connect the cable to the winching point located at the rear of the base.
6. Carefully winch the machine onto the truck.
7. Secure the machine base to the transport vehicle. See Securing the Machine.

Loading the Machine With a Crane
Use the lifting eye mounted on the rear mast column.

The battery pack must be removed before lifting the machine with a crane. Disconnect the battery plug before removing the battery pack.

Be sure to inspect the machine and remove any loose or unsecured items.

Always place the lifting hook through the lifting eye so that it points away from the machine.
Tilt-back Operation Instructions

Observe and obey:

- The retaining pin must be inserted to prevent the spring-loaded tilt-back frame from dropping.
- Do not tilt the machine back unless the area is clear of personnel and obstructions.
- Do not stand behind or under the tilt-back frame when raising or lowering it.

Tilt-back Frame

The Genie AWP Super Series has a tilt-back frame which allows the machine to roll through a standard doorway. The tilt-back frame is standard equipment on standard base AWP-36S and 40S models, and optional on standard base AWP-15S, 20S, 25S and 30S models. The tilt-back frame is not available on narrow base machines or rough terrain base machines.

Lifting Instructions

The number of people required to load and unload a machine is dependent on a number of factors, including but not limited to:

- the physical condition, strength and disabilities or prior injuries of the people involved
- the vertical and horizontal distances the machine has to be moved
- the number of times the machine will be loaded or unloaded
- the stance, posture and grip used by the people involved
- the lifting techniques used
- the site conditions and weather in which the activity is being performed (i.e., slippery, icy, raining)

The appropriate number of people and proper lifting techniques must be used to prevent physical injury.
TILTBACK OPERATION INSTRUCTIONS

Lowering the Tilt-back Assembly

1. Be sure the area behind the machine and under the tilt-back frame is clear of personnel and obstructions.
2. Fully lower the platform.
3. Remove the outriggers from the base and place them in the storage sockets.

The tilt-back frame is spring loaded and will immediately fall outward when the retaining pin is removed. Maintain a firm grasp on the tilt-back frame and remove the retaining pin.

4. Lower the tilt-back frame and guide the tilt-back strut into the strut socket.
5. Insert the retaining pin into the strut socket.

Tilting Back the Machine

1. Slide out the T-handle until the lock pin snaps into place.
2. Lift the machine with the T-handle to mid-tilt position—casters on the tilt-back frame are in contact with the floor, and the machine is supported by the extended tilt-back strut. Use the appropriate number of people and proper lifting techniques.

3. Continue lifting until the telescoping tilt-back strut is completely compressed.
4. Return the sliding T-handle to the stowed position.
Returning the Machine to Standing Position

1. Be sure the area below the machine base and T-handle is clear of personnel and obstructions.

2. Slide out the T-handle until the lock pin snaps into place.

3. Carefully pull down the T-handle until the machine rests at mid-tilt position.

4. Lower the machine with the T-handle until the base casters are in contact with the ground. Use the appropriate number of people and proper lifting techniques.

5. Return the sliding T-handle to the stowed position.

Stowing the Tilt-back Assembly

1. Remove the retaining pin.

2. Firmly grasp the tilt-back frame and remove the tilt-back strut from the strut socket.

3. Lift the tilt-back frame, hold in an upright position against the spring and secure with the retaining pin.
Decals

### Inspection for Decals with Words

Determine whether the decals on your machine have words or symbols. Use the appropriate inspection to verify that all decals are legible and in place.

Lift capacity
- AWP-20S, 25S, 30S, 36S: 350 lbs / 159 kg
- AWP-40S: 300 lbs / 136 kg

Power source
- DC model: 12V
- AC model: 110V or 220V

Air motor: 100 psi / 6.9bar @ 80 cfm / 37760 cc/sec

Ambient operating temperature: -20°F to 135°F (-29°C to 57°C)

Airborne noise emissions
- Sound pressure level at ground workstation: < 70 dBA
- Sound pressure level at platform workstation: < 70 dBA
- Total vibration value to which the hand/arm system is subjected does not exceed 2.5 m/s².
- Highest root mean square value of weighted acceleration to which the whole body is subjected does not exceed 0.5 m/s².

### Platform dimensions (length x width x height)

| Standard platform | 27 x 26 x 44 3/4 in |
|                  | 69 cm x 66 cm x 1.1 m |
| Gated or sliding mid-rail | 96 cm x 66 cm x 1.1 m |
| Gated ultra-narrow platform | 22 x 18 x 44 3/4 in |
|                          | 56 cm x 46 cm x 1.1 m |
| Gated narrow platform | 26 x 20 x 44 3/4 in |
|                        | 66 cm x 51 cm x 1.1 m |
| Standard fiberglass platform | 29 x 26 1/2 x 43 1/2 in |
|                          | 74 cm x 67 cm x 1.1 m |
| Narrow fiberglass platform | 26 x 22 x 43 1/2 in |
|                           | 66 cm x 56 cm x 1.1 m |
| Front entry gated narrow platform | 20 x 26 x 44 3/4 in |
|                                | 51 cm x 66 cm x 1.1 m |
