Important

Read, understand and obey these safety rules and operating instructions before operating this machine. Only trained and authorized personnel shall be permitted to operate this machine. If you have any questions, call Genie Industries.

Safety Rules

Warning

Failure to obey the instructions and safety rules in this manual may result in death or serious injury.

Do Not Operate Unless:

☑️ You learn and practice the principles of safe machine operation contained in this operator's manual.

1 Avoid hazardous situations.
Know and understand the safety rules before going on to the next section.

2 Always perform a pre-operation inspection.

3 Always perform the function tests prior to use.

4 Inspect the workplace.

5 Only use the machine as it was intended.

☑️ You read, understand and obey the manufacturer's instructions and safety rules—safety and operator's manuals and machine decals.

☑️ You read, understand and obey employer's safety rules and work site regulations.

☑️ You read, understand and obey all applicable governmental regulations.

☑️ You are properly trained to safely operate the machine.
SAFETY RULES

Fall Hazards
Do not use as a personnel lifting platform or step.
Do not stand or sit on the forks, load platform or boom.
Do not climb on the machine.

Tip-over Hazards
Do not exceed the rated load capacity. See Load Capacity Charts section.
Do not raise the load unless the leg lock pins have been properly inserted into the legs.
Do not raise the load unless the correct length legs are properly installed.
Do not raise the load unless the machine is on a firm, level surface.

Do not place ladders or scaffolding against any part of the machine.
Do not operate the machine unless the wheel / leg / caster configuration is properly installed.
Prior to use, check the work area for drop-offs, holes, bumps, debris, unstable or slippery surfaces or other possible hazardous conditions.
Avoid debris and uneven surfaces while rolling a machine without the legs installed.
Do not replace machine parts critical to stability or structure with items of different weight or specification.
Do not cause a horizontal force or side load to the machine by raising or lowering a fixed or overhanging load.
Do not use the machine on a moving or mobile surface or vehicle.

Collision Hazards
Do not raise if the load is not properly centered on the forks or load platform.
Check the work area for overhead obstructions or other possible hazards.
Do not stand under or allow personnel under the machine when the load is raised.
Do not lower the load unless the area below is clear of personnel and obstructions.
Use common sense and planning when transporting the machine on an incline, slope or stairs.
Maintain proper lubrication on the frame channels. See the Pre-operation Inspection section.
Unlubricated frame channels can bind or stop moving, which could result in the load shifting or falling.
Electrocution Hazards

This machine is not electrically insulated and will not provide protection from contact with or proximity to electrical current.

Maintain safe distances away from electrical power lines and apparatus in accordance with applicable governmental regulations and the following chart.

<table>
<thead>
<tr>
<th>Voltage</th>
<th>Minimum Safe Approach Distance</th>

</tbody>
</table>

Allow for mast movement and electrical line sway or sag, and beware of strong or gusty winds.

Keep away from the machine if it contacts energized power lines. Personnel must not touch or operate the machine until power lines are shut off.

Do not use the machine as a ground for welding.

Bodily Injury Hazards

Do not grasp the cable.

Keep hands and fingers away from the pulleys, carriage and other potential pinch points.

Do not place arms, hands or fingers through the frame.

Improper Use Hazard

Never leave a machine unattended with a load. Unauthorized personnel may attempt to operate the machine without proper instruction, creating an unsafe condition.

Damaged Machine Hazards

Do not use a damaged or malfunctioning machine.

Do not use a machine with a worn, frayed, kinked or damaged cable.

Do not use a machine with less than 4 wraps of cable on the winch drum when the carriage is fully lowered.

Conduct a thorough pre-operation inspection prior to each use.

Be sure that all decals are legible and in place.

Maintain proper lubrication on the winch. See Genie Lift Parts and Service Manual for details. Do not allow oil or grease on braking surfaces.

Crushing Hazard

Maintain a firm grasp on the winch handle until the brake is locked. The brake is locked when the load will not cause the winch handle to turn.

Lifting Hazard

Use proper lifting techniques to load or tip the machine, or move the machine on stairs.

Do not move the machine on stairs when the machine is equipped with the 4 point caster option.
SAFETY RULES

Ladder Safety

Fall Hazards
Do not use the ladder as scaffolding.
Do not sit on the ladder.
Do not over reach. Keep your body centered between both side rails.
Do not use the top rung as a step.

Tip-over Hazards
Do not exceed the ladder's maximum capacity of 250 lbs / 113 kg.
Do not overload the ladder. Ladders are designed for 1 person only.
Do not use the ladder unless it is properly set up.
Do not shift the ladder while on it. Avoid pushing or pulling off to the side of the ladder.
Do not set up the ladder on slippery surfaces.
Do not use blocks to level the ladder.

Electric Winch Safety

Electrocution Hazard
Do not operate the DC battery charger unless using a 3-wire grounded extension cord connected to a grounded AC circuit. Do not alter or disable the 3-wire grounded plugs.

Tip-over Hazards
Do not exceed the rated load capacity. See Load Capacity Charts section.
Do not use the electric winch on models with the standard base. The electric winch is designed for use only on straddle base models.
Do not alter or disable the limit switch.

Battery and Charger Safety - Electric Winch Models

Burn Hazards
Batteries contain acid. Always wear protective clothing and eyewear when working with batteries.
Avoid spilling or contacting battery acid. Neutralize battery acid spills with baking soda and water.
The battery pack must remain in an upright position.
SAFETY RULES

Explosion Hazards

Batteries emit explosive gas. Keep sparks, flames and lighted tobacco away from the battery.

Charge the battery in a well-ventilated area.

Do not disconnect the charger DC output wires from the battery when the charger is on.

Electrocution Hazards

Connect the charger to a grounded AC circuit only.

Do not expose the battery or charger to water or rain.

Before each use, inspect for damage. Replace damaged components before operating.

Lifting Hazard

The battery pack weighs 80 lbs / 37 kg. Use the appropriate number of people and proper lifting techniques when lifting the battery pack.

Decal Legend

Genie product decals use symbols, color coding and signal words to identify the following:

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

Red—used to indicate the presence of an imminently hazardous situation which, if not avoided, will result in death or serious injury.

Orange—used to indicate the presence of a potentially hazardous situation which, if not avoided, could result in death or serious injury.

Yellow with safety alert symbol—used to indicate the presence of a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

Yellow without safety alert symbol—used to indicate the presence of a potentially hazardous situation which, if not avoided, may result in property damage.

Green—used to indicate operation or maintenance information.

Pre-operation Inspection

Do Not Operate Unless:

☐ You learn and practice the principles of safe machine operation contained in this operator’s manual.
1 Avoid hazardous situations.
2 Always perform a pre-operation inspection.
   Know and understand the pre-operation inspection before going on to the next section.
3 Always perform function tests prior to use.
4 Inspect the workplace.
5 Only use the machine as it was intended.

Fundamentals

The pre-operation inspection is a visual inspection performed by the operator prior to each work shift. This inspection is designed to discover if anything is apparently wrong with a machine before the operator tests it.

Refer to the list on the next page and check each of the items.

If damage or any unauthorized variation from factory delivered condition is discovered, the machine must be tagged and removed from service.

Repairs to the machine may only be made by a qualified service technician, according to the manufacturer's specifications. After repairs are completed, the operator must perform a pre-operation inspection again before testing the machine functions.
Pre-operation Inspection

- Be sure that the operator’s manual is complete, legible and available for reference.
- Be sure that all decals are legible and in place. See Decals section.

Check the following components or areas for damage, improperly installed or missing parts and unauthorized modifications:

- Winch and related components
- Base components
- Legs
- Roller wheels
- Inner and outer frames
- Glide buttons
- Carriage hold-down assembly
- Cable anchor
- Cable and pulleys
- Wheels and casters
- Forks
- Load platform and boom (if equipped)
- Nuts, bolts and other fasteners
- Cable (kinks, frays, abrasions)
- Ladder (if equipped)
- Brake system (if equipped)
- Limit switch (electric winch models)
- Electric winch and related components (if equipped)
- Hand controls and wiring (electric winch models)

Check the entire machine for:

- Dents or damage
- Corrosion or oxidation
- Cracks in welds or structural components
- Be sure that all structural and other critical components are present and all associated fasteners and pins are in place and properly tightened.
- Inspect and clean the battery terminals and all battery cable connections.
- Be sure there is a minimum of 4 wraps of cable around the winch drum when the carriage is fully lowered.
- Be sure the frame channels are properly lubricated and free of debris. Lubricate the channels with a dry silicone spray or silicone wax (Genie part number 90337).
Function Tests

Fundamentals

The function tests are designed to discover any malfunctions before the machine is put into service. The operator must follow the step-by-step instructions to test all machine functions.

A malfunctioning machine must never be used. If malfunctions are discovered, the machine must be tagged and removed from service. Repairs to the machine may only be made by a qualified service technician, according to the manufacturer's specifications.

After repairs are completed, the operator must perform a pre-operation inspection and function tests again before putting the machine into service.

Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator's manual.

1 Avoid hazardous situations.

2 Always perform a pre-operation inspection.

3 Always perform function tests prior to use.

Know and understand the function tests before going on to the next section.

4 Inspect the workplace.

5 Only use the machine as it was intended.
**Function Tests**

1. Select a test area that is firm, level and free of obstructions.

**Setup**

1. Tilt the machine back.
2. Slide each fork onto the carriage and secure it with the fork lock pins.
3. Slide each leg into a base socket until the leg lock pin snaps into the leg.
4. Stand the machine up.
5. Remove the winch handle, reverse the handle and install it. The handle grip should face the operator.
6. **Straddle base:** Adjust to desired width. Be sure the leg lock pin snaps into the leg.
7. Rotate the hold-down bar off of the carriage.

**Boom**

1. Hold the boom in a vertical position.
2. Place the top of the boom plate under the upper fork mounting tube and lift up.
3. Rotate the boom down until it locks into place.
4. Attach the lifting shackle to the desired hole on the boom.

**Load Platform**

1. Lay the load platform onto the forks.
2. Lift the front of the load platform and push it toward the carriage until the back angle is under the lower fork mounting tube.
3. Rotate the load platform down until it locks into place over the forks.

**Ladder Setup (if equipped)**

1. Position the machine.
2. Pull the snap pins on both sides of the ladder.
3. Pull the ladder down into the lowered position. Be sure to support the ladder until it is fully lowered.

To store the ladder: Raise the ladder to the stowed position and be sure the snap pins lock into place.
FUNCTION TESTS

Test the Brake Operation (if equipped)

1. Press down on the foot pedal to lock the brake.
2. Push the machine.
   - Result: The wheels should not roll.
3. Pull up on the foot pedal to release the brake.
4. Push the machine.
   - Result: The machine should move.

Test the Winch Operation

Note: The Genie Lift 4 does not have an inner frame.

1. Rotate the winch handle clockwise to raise the carriage.
   - Result: The carriage should raise to the top of the inner frame and then the inner frame should raise. The carriage and inner frame should move smoothly, free of hesitation and binding.
2. Rotate the winch handle counterclockwise to lower the carriage.
   - Result: The inner frame should lower into the outer frame, and then the carriage should lower into the inner frame. The carriage and inner frame should move smoothly, free of hesitation and binding.

Note: If the carriage and inner frame do not move freely, the channels may need to be lubricated with a dry silicone spray or silicone wax.

Test Electric Winch Operation (if equipped)

Note: The Genie Lift 4 does not have an inner frame.

1. Connect the battery pack.
2. Pull out the red Emergency Stop button to the on position.
3. Push the up button on the hand controls.
   - Result: The carriage should raise to the top of the inner frame and then the inner frame should raise. The carriage and inner frame should move smoothly, free of hesitation and binding. The winch should turn off when the carriage reaches maximum height.
4. Push in the red Emergency Stop button to the off position.
5. Push the down button, then the up button.
   - Result: The up/down function should not operate.
Workplace Inspection

Do Not Operate Unless:

☑ You learn and practice the principles of safe machine operation contained in this operator's manual.
1 Avoid hazardous situations.
2 Always perform a pre-operation inspection.
3 Always perform function tests prior to use.
4 Inspect the workplace.
   Know and understand the workplace inspection before going on to the next section.
5 Only use the machine as it was intended.

Fundamentals

The workplace inspection helps the operator determine if the workplace is suitable for safe machine operation. It should be performed by the operator prior to moving the machine to the workplace.

It is the operator's responsibility to read and remember the workplace hazards, then watch for and avoid them while moving, setting up and operating the machine.

Be aware of and avoid the following hazardous situations:
- drop-offs or holes
- bumps and floor obstructions
- debris
- overhead obstructions and high voltage conductors
- hazardous locations
- sloped surfaces
- unstable or slippery surfaces
- inadequate surface support to withstand all load forces imposed by the machine
- wind and weather conditions
- all other possible unsafe conditions
Operating Instructions

Do Not Operate Unless:

☐ You learn and practice the principles of safe machine operation contained in this operator’s manual.
1. Avoid hazardous situations.
2. Always perform a pre-operation inspection.
3. Always perform function tests prior to use.
4. Inspect the workplace.
5. Only use the machine as it was intended.

Fundamentals

The Operating Instructions section provides instructions for each aspect of machine operation. It is the operator's responsibility to follow all the safety rules and instructions in the operator's manual.

Using the machine for any purpose other than lifting material is unsafe.

If more than one operator is expected to use a machine at different times in the same work shift, each operator is expected to follow all safety rules and instructions in the operator's manual. That means every new operator should perform a pre-operation inspection, function tests and a workplace inspection before using the machine.

Setup

Select an area that is firm, level and free of obstructions.

Follow the Setup procedures in the Function Tests section.

Raising and Lowering Load - Manual Winch

1. Center the load on the forks or load platform.
2. Raise the load by firmly grasping the winch handle and rotating it clockwise. Do not allow the cable to wind unevenly onto the winch drum.
3. Lower the load by firmly grasping the winch handle and rotating it counterclockwise. After lowering to the desired position, turn the winch handle clockwise (raise the load) ¼ turn to set the brake.

Raising and Lowering Load - Electric Winch

1. Center the load on the forks or load platform.
2. Connect the battery pack.
3. Pull out the red Emergency Stop button to the on position.
4. Push the up or down button on the hand controls for the desired direction of travel.
Moving Machine with a Load

It is best to move the machine on the work site with no load. Moving a raised load should be restricted to positioning for loading and unloading. If it is necessary to move the machine with a raised load, understand and obey the following safety rules:

- Make sure the area is level and clear of obstructions.
- Make sure the load is centered on the forks or load platform.
- Avoid sudden starts and stops.
- Travel with the load in the lowest possible position.
- Keep personnel away from the machine and load.
- Do not tilt the machine back with a raised load.

Moving Machine on Stairs

It is best to move the machine on stairs using the optional stair glides. Moving the machine on stairs without the use of stair glides is not recommended. If it is necessary to move the machine on stairs, understand and obey the following safety rules:

- Do not move the machine on stairs when the machine is equipped with the 4 point caster option.
- Fully lower the load.
- Ease the machine over each stair. Maintain a firm grasp on the handle.
- Do not allow the machine to become unbalanced.
- Continue carefully up or down the stairs.
- Use the appropriate number of people and proper lifting techniques with heavy loads.
- Models with electric winch: Remove the battery pack.

After Each Use

To prepare the machine for storage, remove the forks and legs and reverse the winch handle. Refer to the Setup procedure.

Select a safe storage location - firm level surface, weather protected, clear of obstruction and traffic.

Models with electric winch: Recharge the battery.

Select a safe storage location - firm level surface, weather protected, clear of obstruction and traffic.

Models with electric winch: Recharge the battery.
Battery and Charger Instructions

Observe and Obey:

☑ Do not use an external charger or booster battery.
☑ Charge the battery in a well-ventilated area.
☑ Use proper AC input voltage for charging as indicated on the charger.
☑ Use only a Genie authorized battery and charger.

To Charge Battery

1. Open the battery pack lid to access the battery.
2. Remove the battery vent caps and check the battery acid level. If necessary, add only enough distilled water to cover the plates. Do not overfill prior to the charge cycle.
3. Replace the battery vent caps.
4. If equipped: Set the power switch to the OFF position. Be sure that the DC output cord is properly connected to the battery (black to negative, red to positive).
5. Connect the battery charger to a grounded AC circuit.
6. If equipped: Set the AC Selector switch to the proper voltage.
7. Set the power switch to the AUTO position.
8. Monitor the ampere meter for the correct charge rate. The initial charge rate should be approximately 10A. The charge rate will decrease as the battery reaches full charge.

9. Charger models equipped with manual/auto selector switch: If the ampere meter indicates that the battery is not being charged, set the power switch to the MANUAL position until the ampere meter begins to move up the scale. Then set the power switch to the AUTO position.

10. The charger will turn off automatically when the battery is fully charged. If equipped: Set the power switch to the OFF position, then disconnect from the AC supply.

11. Check the battery acid level when the charge cycle is complete. Replenish with distilled water to the bottom of the fill tube. Do not overfill.

Dry Battery Filling and Charging Instructions

1. Remove the battery vent caps and permanently remove the plastic seal from the battery vent openings.
2. Fill each cell with battery acid (electrolyte) until the level is sufficient to cover the plates. Do not fill to maximum level until the battery charge cycle is complete. Overfilling can cause the battery acid to overflow during charging. Neutralize battery acid spills with baking soda and water.
3. Install the battery vent caps.
4. Charge the battery.
5. Check the battery acid level when the charging cycle is complete. Replenish with distilled water to the bottom of the fill tube. Do not overfill.
Transport Instructions

Observe and Obey:

☑ Be sure the vehicle capacity and loading surfaces are sufficient to support the machine weight. See the serial plate for the machine weight.

☑ The transport vehicle must be parked on a level surface.

☑ Remove the load from the forks, boom or load platform before loading for transport.

☑ The transport vehicle must be secured to prevent rolling while the machine is being loaded.

☑ The machine must be securely fastened to the transport vehicle.

Lifting Instructions

The number of people required to load and unload a machine is dependent on a number of factors, including but not limited to:

- the physical condition, strength and disabilities or prior injuries of the people involved
- the vertical and horizontal distances the machine has to be moved
- the number of times the machine will be loaded or unloaded
- the stance, posture and grip used by the people involved
- the lifting techniques used
- the site conditions and weather in which the activity is being performed (i.e., slippery, icy, raining)

The appropriate number of people and proper lifting techniques must be used to prevent physical injury.

Loading for Transport

1. Fully lower the carriage.
2. Rotate the carriage hold-down bar over the carriage. Be sure the lock pin snaps into place.
3. Remove the winch handle, reverse the handle and install it. The handle grip should face the carriage.
4. Models with electric winch: Remove the battery pack.
Observe and Obey:

- Ensure proper positioning to avoid death or serious injury.
- Verify maximum load capacity for your load center.
- Position the load center to avoid death or serious injury.
- A load center is defined as the balancing point (center of gravity) of a load and must be positioned within the load center zone.
- Tip-over hazard: Failure to position the load center within the load center zone may result in death or serious injury.

**Load Positioning Instructions**

1. Determine the weight of the load and the location of its load center.
2. Measure to the load center from the side of the load that will be closest to the carriage.
3. Refer to the chart on the next page to determine if the machine is capable of lifting the weight at the location on the forks.
4. Place the load so that it rests on the forks, as close to the carriage as possible.
5. Position the load so that the load center is within the load center zone.
LOAD CAPACITY CHARTS

**Boom**

**Load Positioning Instructions**

1. Determine the weight of the load and the location of its load center.
2. Refer to the chart below to determine if the machine is capable of lifting the weight at the location on the boom.
3. Attach the lifting shackle to the desired hole on the boom.

*The electric winch option will add an additional 103 lbs / 47 kg to the above machine weights.*

**Machines with standard or straddle base ship standard with 8 inch rear wheels and 2 inch dual wheel front swivel casters.**

**Machines with counterweight base ship standard with 5 inch rear swivel casters with side brakes and 4 inch front fixed wheels.**

### Model GL-4, GL-8, GL-10 and GL-12

**Wheel and Casters:**
- Pneumatic option
- Front: 2 1/2 inch swivel casters
- Rear: 10 inch pneumatic wheels

**Base: Straddle Base**

- Front: 2 1/2 inch swivel casters
- Rear: 10 inch pneumatic wheels

**4 point caster option A**
- Front: 2 inch dual wheel swivel casters
- Rear: 4 inch swivel casters

**4 point caster option B**
- Front: 2 1/2 inch swivel casters
- Rear: 5 inch swivel casters with side brakes and 4 point rotational locks

**Base: Counterweight**

**Wheel and Casters:**
- 4 inch fixed wheel
- 5 inch swivel casters with side brakes
- 4 point rotational locks

*Machines with standard or straddle base ship standard with 8 inch rear wheels and 2 inch dual wheel front swivel casters.*

**Machines with counterweight base ship standard with 5 inch rear swivel casters with side brakes and 4 inch front fixed wheels.*
