Serial Number Range

**GS™-1530/32**
from GS3003-60000 to GS3005-75999

**GS™-1930/32**
from GS3003-60000 to GS3005-75999

**GS™-2032**
from GS3204-60000 to GS3205-75406

**GS™-2632**
from GS3204-60000 to GS3205-75406

**GS™-2046**
from GS4604-60000 to GS4605-75437

**GS™-2646**
from GS4604-60000 to GS4605-75437

**GS™-3246**
from GS4604-60000 to GS4605-75437

Part No. 96316
Rev E5
November 2010
Introduction

Important

Read, understand and obey the safety rules and operating instructions in the appropriate Operator's Manual on your machine before attempting any maintenance procedure.

Basic mechanical, hydraulic and electrical skills are required to perform most procedures. However, several procedures require specialized skills, tools, lifting equipment and a suitable workshop. In these instances, we strongly recommend that maintenance and repair be performed at an authorized Genie dealer service center.

Technical Publications

Genie Industries has endeavored to deliver the highest degree of accuracy possible. However, continuous improvement of our products is a Genie policy. Therefore, product specifications are subject to change without notice.

Readers are encouraged to notify Genie of errors and send in suggestions for improvement. All communications will be carefully considered for future printings of this and all other manuals.

Serial Number Information

Genie Industries offers the following Service Manuals for these models:

<table>
<thead>
<tr>
<th>Title</th>
<th>Part No.</th>

Safety Rules

Danger

Failure to obey the instructions and safety rules in this manual and the appropriate Operator's Manual on your machine will result in death or serious injury.

Many of the hazards identified in the operator’s manual are also safety hazards when maintenance and repair procedures are performed.

Do Not Perform Maintenance Unless:

☑️ You are trained and qualified to perform maintenance on this machine.

☑️ You read, understand and obey:
  - manufacturer’s instructions and safety rules
  - employer’s safety rules and worksite regulations
  - applicable governmental regulations

☑️ You have the appropriate tools, lifting equipment and a suitable workshop.
SAFETY RULES

Personal Safety

Any person working on or around a machine must be aware of all known safety hazards. Personal safety and the continued safe operation of the machine should be your top priority.

Read each procedure thoroughly. This manual and the decals on the machine, use signal words to identify the following:

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

**DANGER**

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

**WARNING**

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION**

Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

**NOTICE**

Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

Be sure to wear protective eye wear and other protective clothing if the situation warrants it.

Be aware of potential crushing hazards such as moving parts, free swinging or unsecured components when lifting or placing loads. Always wear approved steel-toed shoes.

Workplace Safety

Be sure to keep sparks, flames and lighted tobacco away from flammable and combustible materials like battery gases and engine fuels. Always have an approved fire extinguisher within easy reach.

Be sure that all tools and working areas are properly maintained and ready for use. Keep work surfaces clean and free of debris that could get into machine components and cause damage.

Be sure any forklift, overhead crane or other lifting or supporting device is fully capable of supporting and stabilizing the weight to be lifted. Use only chains or straps that are in good condition and of ample capacity.

Be sure that fasteners intended for one time use (i.e., cotter pins and self-locking nuts) are not reused. These components may fail if they are used a second time.

Be sure to properly dispose of old oil or other fluids. Use an approved container. Please be environmentally safe.

Be sure that your workshop or work area is properly ventilated and well lit.

### Braking distance, maximum

**High range on paved surface** 24 in ± 12 in 61 cm ± 30 cm

### Gradeability

**GS-1930, GS-2632 and GS-3246** 25%

**GS-1530, GS-2032, GS-2046 and GS-2646** 30%

### Airborne noise emissions <70 dB

Maximum sound level at normal operation workstations (A-weighted)

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.
Hydraulic Specifications

**Hydraulic Oil Specifications**

- **Hydraulic oil type**: Chevron Rando HD equivalent
- **ISO viscosity grade**: Multi-viscosity
- **Viscosity index**: 200
- **Cleanliness level, minimum**: 15/13
- **Water content, maximum**: 200 ppm

Chevron Rando HD oil is fully compatible and mixable with Shell Donax TG (Dexron III) oils.

Genie specifications require hydraulic oils which are designed to give maximum protection to hydraulic systems, have the ability to perform over a wide temperature range, and have a minimum viscosity index of 150. They should provide excellent antiwear, oxidation, corrosion inhibition, seal conditioning, and foam and aeration suppression properties.

**Optional fluids**

- **Biodegradable**: Petro Canada Environ MV 46, Statoil Hydra Way Bio Pa 32, BP Biohyd SE-S
- **Fire resistant**: UCON Hydrolube HP-5046, Quintolubric 822
- **Mineral based**: Shell Tellus T32, Shell Tellus T46, Chevron Aviation A

**Function pump**

- **Type**: Gear
- **Displacement per revolution**: 0.244 cu in, 4 cc
- **Flow rate @ 2500 psi / 172 bar**: 4 gpm, 15 L/min
- **Hydraulic tank return filter**: 10 micron with 25 psi / 1.7 bar bypass

**Function manifold**

- **System relief valve pressure, maximum**: 3500 psi, 241 bar
- **Lift relief valve pressure**: 1800 to 3500 psi, 124 to 241 bar
- **Steer relief valve pressure**: 1500 psi, 103 bar

**Check valve manifold - GS-1530, GS-1532, GS-1930, GS-1932**

(200 psi, 13.8 bar)

**Check valve manifold pressure**: 200 psi, 13.8 bar

Continuous improvement of our products is a Genie policy. Product specifications are subject to change without notice.

**NOTICE**

Continued use of Chevron Aviation A hydraulic fluid when ambient temperatures are consistently above 32°F / 0°C may result in component damage.

Note: Use Chevron Aviation A hydraulic fluid when ambient temperatures consistently below 0°F / -17°C.

Note: Use Shell Tellus T46 hydraulic oil when oil temperatures consistently exceed 205°F / 96°C.

Note: Genie specifications require additional equipment and special installation instructions for the approved optional fluids. Consult the Genie Industries Service Department before use.

Valve Coil Resistance

Note: The following coil resistance specifications are at an ambient temperature of 68°F / 20°C. As valve coil resistance is sensitive to changes in air temperature, the coil resistance will typically increase or decrease by 4% for each 18°F / -7.7°C that your air temperature increases or decreases from 68°F / 20°C.

Hydraulic Hose and Fitting
Torque Specifications

Your machine is equipped with JIC 37° flared fittings and hose ends. Genie specifications require that fittings and hose ends be torqued to specification when they are removed and installed or when new hoses or fittings are installed.

Torque Procedure

JIC 37° fittings

1. Align the tube flare (hex nut) against the nose of the fitting body (body hex fitting) and tighten the hex nut to the body hex fitting to hand-tight, approximately 30 in-lbs / 3.4 Nm.

2. Make a reference mark on one of the flats of the hex nut, and continue it on to the body hex fitting with a permanent ink marker. Refer to Figure 1.

3. Working clockwise on the body hex fitting, make a second mark with a permanent ink marker to indicate the proper tightening position. Refer to Figure 2.

Note: Use the JIC 37° Fittings table on the previous page to determine the correct number of flats for the proper tightening position.

Note: The marks indicate that the correct tightening positions have been determined. Use the second mark on the body hex fitting to properly tighten the joint after it has been loosened.

4. Tighten the hex nut until the mark on the hex nut is aligned with the second mark on the body hex fitting.

5. Operate all machine functions and inspect the hoses and fittings and related components to confirm that there are no leaks.

Part No. 96316  
GS-30 • GS-32 • GS-46  
2 - 7
Scheduled Maintenance Procedures

Observe and Obey:

- Maintenance inspections shall be completed by a person trained and qualified on the maintenance of this machine.
- Scheduled maintenance inspections shall be completed daily, quarterly and semi-annually, annually and every two years as specified on the Maintenance Inspection Report.
- Failure to perform each procedure as presented and scheduled could result in death, serious injury or substantial damage.
- Immediately tag and remove from service a damaged or malfunctioning machine.
- Repair any machine damage or malfunction before operating the machine.
- Use only Genie approved replacement parts.
- Machines that have been out of service for a period longer than 3 months must complete the quarterly inspection.
- Unless otherwise specified, perform each maintenance procedure with the machine in the following configuration:
  - Machine parked on a firm, level surface
  - Platform in the stowed position
  - Key switch in the off position with the key removed
  - The red Emergency Stop button in the off position at both ground and platform controls
  - Wheels chocked
  - All external AC power supply disconnected from the machine

About This Section

This section contains detailed procedures for each scheduled maintenance inspection.

Each procedure includes a description, safety warnings and step-by-step instructions.

Symbols Legend

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠️ DANGER
Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING
Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ CAUTION
Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

⚠️ NOTICE
Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

○ Indicates that a specific result is expected after performing a series of steps.

❌ Indicates that an incorrect result has occurred after performing a series of steps.
SCHEDULED MAINTENANCE PROCEDURES

Maintenance Symbols Legend

Note: The following symbols have been used in this manual to help communicate the intent of the instructions. When one or more of the symbols appears at the beginning of a maintenance procedure, it conveys the meaning below.

- Indicates that tools will be required to perform this procedure.
- Indicates that new parts will be required to perform this procedure.
- Indicates that a cold motor or pump will be required to perform this procedure.
- Indicates that dealer service will be required to perform this procedure.

Pre-delivery Preparation Report

The pre-delivery preparation report contains checklists for each type of scheduled inspection.

Make copies of the Pre-delivery Preparation report to use for each inspection. Store completed forms as required.

Maintenance Schedule

There are five types of maintenance inspections that must be performed according to a schedule—daily, quarterly, semi-annually, annually, and two year. The Scheduled Maintenance Procedures Section and the Maintenance Inspection Report have been divided into five subsections—A, B, C, D, and E. Use the following chart to determine which group(s) of procedures are required to perform a scheduled inspection.

<table>
<thead>
<tr>
<th>Inspection</th>
<th>Checklist</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daily or every 8 hours</td>
<td>A</td>
</tr>
<tr>
<td>Quarterly or every 250 hours</td>
<td>A + B</td>
</tr>
<tr>
<td>Semi-annually or every 500 hours</td>
<td>A + B + C</td>
</tr>
<tr>
<td>Annually or every 1000 hours</td>
<td>A + B + C + D</td>
</tr>
<tr>
<td>Two year or every 2000 hours</td>
<td>A + B + C + D + E</td>
</tr>
</tbody>
</table>

Maintenance Inspection Report

The maintenance inspection report contains checklists for each type of scheduled inspection.

Make copies of the Maintenance Inspection Report to use for each inspection. Maintain completed forms for a minimum of 4 years or in compliance with your employer, jobsite and governmental regulations and requirements.
**Pre-Delivery Preparation**

**Fundamentals**

It is the responsibility of the dealer to perform the Pre-delivery Preparation.

The Pre-delivery Preparation is performed prior to each delivery. The inspection is designed to discover if anything is apparently wrong with a machine before it is put into service.

A damaged or modified machine must never be used. If damage or any variation from factory delivered condition is discovered, the machine must be tagged and removed from service.

Repairs to the machine may only be made by a qualified service technician, according to the manufacturer's specifications.

Scheduled maintenance inspections shall be performed by qualified service technicians, according to the manufacturer's specifications and the requirements listed in the responsibilities manual.

**Instructions**

Use the operator's manual on your machine.

The Pre-delivery Preparation consists of completing the Pre-operation Inspection, the Maintenance items and the Function Tests.

Use this form to record the results. Place a check in the appropriate box after each part is completed. Follow the instructions in the operator's manual.

If any inspection receives an N, remove the machine from service, repair and re-inspect it. After repair, place a check in the R box.

**Legend**

- Y = yes, completed
- N = no, unable to complete
- R = repaired

- Place a check in the appropriate box after each inspection procedure is completed.
- Use the step-by-step procedures in this section to learn how to perform these inspections.
- If any inspection receives an “N”, tag and remove the machine from service, repair and re-inspect it. After repair, place a check in the “R” box.
A-1

Inspect the Manuals and Decals

Maintaining the operator’s and safety manuals in good condition is essential to safe machine operation. Manuals are included with each machine and should be stored in the container provided in the platform. An illegible or missing manual will not provide safety and operational information necessary for a safe operating condition.

In addition, maintaining all of the safety and instructional decals in good condition is mandatory for safe machine operation. Decals alert operators and personnel to the many possible hazards associated with using this machine. They also provide users with operation and maintenance information. An illegible decal will fail to alert personnel of a procedure or hazard and could result in unsafe operating conditions.

1. Check to make sure that the operator’s and safety manuals are present and complete in the storage container on the platform.

2. Examine the pages of each manual to be sure that they are legible and in good condition.

   ○ Result: The operator’s manual is appropriate for the machine and all manuals are legible and in good condition.

   ✗ Result: The operator’s manual is not appropriate for the machine or all manuals are not in good condition or is illegible. Remove the machine from service until the manual is replaced.

3. Open the operator’s manual to the decals inspection section. Carefully and thoroughly inspect all decals on the machine for legibility and damage.

   ○ Result: The machine is equipped with all required decals, and all decals are legible and in good condition.

   ✗ Result: The machine is not equipped with all required decals, or one or more decals are illegible or in poor condition. Remove the machine from service until the decals are replaced.

4. Always return the manuals to the storage container after use.

Note: Contact your authorized Genie distributor or Genie Industries if replacement manuals or decals are needed.
Perform Pre-operation Inspection

Completing a Pre-operation Inspection is essential to safe machine operation. The Pre-operation Inspection is a visual inspection performed by the operator prior to each work shift. The inspection is designed to discover if anything is apparently wrong with a machine before the operator performs the function tests. The Pre-operation Inspection also serves to determine if routine maintenance procedures are required.

Complete information to perform this procedure is available in the appropriate operator's manual. Refer to the Operator's Manual on your machine.

Perform Function Tests

Completing the function tests is essential to safe machine operation. Function tests are designed to discover any malfunctions before the machine is put into service. A malfunctioning machine must never be used. If malfunctions are discovered, the machine must be tagged and removed from service.

Complete information to perform this procedure is available in the appropriate operator's manual. Refer to the Operator's Manual on your machine.
A-4
Perform 30 Day Service

The 30 day maintenance procedure is a one time procedure to be performed after the first 30 days or 40 hours of usage. After this interval, refer to the maintenance tables for continued scheduled maintenance.

1 Perform the following maintenance procedures:
   · B-3 Inspect the Tires and Wheels (including castle nut torque)
   · D-3 Replace the Hydraulic Tank Return Filter

A-5
Grease the Steer Yokes

Genie specifications require that this procedure be performed every 100 hours of operation.

Regular application of lubrication to the steer yokes is essential to good machine performance and service life. Continued use of an insufficiently greased steer yoke will result in component damage.

1 Locate the grease fitting on the top of the steer yoke.

2 Pump multipurpose grease into the steer yoke until the steer yoke is full and grease is being forced past the bearings. Repeat this step for the other steer yoke.

Grease Specification

Chevron Ultra-duty grease, EP NLGI 1 (lithium based) or equivalent
Checklist B Procedures

B-1  
Inspect the Batteries

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Proper battery condition is essential to good machine performance and operational safety. Improper fluid levels or damaged cables and connections can result in component damage and hazardous conditions.

⚠️ WARNING
Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

⚠️ WARNING
Bodily injury hazard. Batteries contain acid. Avoid spilling or contacting battery acid. Neutralize battery acid spills with baking soda and water.

1  Release the battery pack latch and rotate the battery pack out and away from the chassis.

2  Be sure that the battery cable connections are free of corrosion.

Note: Adding terminal protectors and a corrosion preventative sealant will help eliminate corrosion on the battery terminals and cables.

3  Be sure that the battery retainers and cable connections are tight.

4  Fully charge the batteries. Allow the batteries to rest 24 hours before performing this procedure to allow the battery cells to equalize.

5  Put on protective clothing and eye wear.

Models without maintenance-free or sealed batteries:

6  Remove the battery vent caps and check the specific gravity of each battery cell with a hydrometer. Note the results.

7  Check the ambient air temperature and adjust the specific gravity reading for each cell as follows:

- Add 0.004 to the reading of each cell for every 10° / 5.5° C above 80° F / 26.7° C.
- Subtract 0.004 from the reading of each cell for every 10° / 5.5° C below 80° F / 26.7° C.

○ Result: All battery cells display an adjusted specific gravity of 1.277 or higher. The battery is fully charged. Proceed to step 11.

× Result: One or more battery cells display a specific gravity of 1.217 or below. Proceed to step 8.

8  Perform an equalizing charge OR fully charge the batteries and allow the batteries to rest at least 6 hours.

9  Remove the battery vent caps and check the specific gravity of each battery cell with a hydrometer. Note the results.

10 Check the ambient air temperature and adjust the specific gravity reading for each cell as follows:

- Add 0.004 to the reading of each cell for every 10° / 5.5° C above 80° F / 26.7° C.
- Subtract 0.004 from the reading of each cell for every 10° / 5.5° C below 80° F / 26.7° C.

○ Result: All battery cells display a specific gravity of 1.277 or greater. The battery is fully charged. Proceed to step 11.

× Result: The difference in specific gravity readings between cells is greater than 0.1 OR the specific gravity of one or more cells is less than 1.177. Replace the battery.
11 Check the battery acid level. If needed, replenish with distilled water to 1/8 inch / 3 mm below the bottom of the battery fill tube. Do not overfill.

12 Install the vent caps and neutralize any electrolyte that may have spilled.

All models:

13 Check each battery pack and verify that the batteries are wired correctly.

14 Inspect the battery charger plug and pigtail for damage or excessive insulation wear. Replace as required.

15 Connect the battery charger to a properly grounded 115V/60Hz or 230V/60Hz single phase AC power supply.

○ Result: The charger should operate and begin charging the batteries.

✗ If, simultaneously, the charger alarm sounds and the LEDs blink one time, correct the charger connections at the fuse and battery. The charger will then operate correctly and begin charging the batteries.

If, simultaneously, the charger alarm sounds and the LEDs blink two times, the input voltage is too low or too high. Correct the voltage issue. The charger will then operate correctly and begin charging the batteries.

If, simultaneously, the charger alarm sounds and the LEDs blink three times, the charger is overheated. Allow the charger to cool. The charger will then operate correctly and begin charging the batteries.

Note: For best results, use an extension of adequate size with a length no longer than 50 feet / 15 m.

Note: If you have any further questions regarding the battery charger operation, please contact the Genie Industries Scissor Service Department.
B-2
Inspection of the Electrical Wiring

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining electrical wiring in good condition is essential to safe operation and good machine performance. Failure to find and replace burnt, chafed, corroded or pinched wires could result in unsafe operating conditions and may cause component damage.

**Electrocution/burn hazard. Contact with hot or live circuits could result in death or serious injury. Remove all rings, watches and other jewelry.**

1. Inspect the underside of the chassis for damaged or missing ground strap(s).

2. Inspect the following areas for burnt, chafed, corroded and loose wires:
   - Ground control panel
   - Hydraulic power unit module tray
   - Battery pack module tray
   - Scissor arms
   - Platform controls

3. Inspect for a liberal coating of dielectric grease in the following locations:
   - Between the ECM and platform controls
   - All wire harness connectors
   - Level sensor

4. Turn the key switch to ground control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

5. Raise the platform approximately 8 feet / 2.4 m from the ground.

6. Rotate the safety arm away from the machine and let it hang down.

7. Lower the platform onto the safety arm.

**Crushing hazard. Keep hands clear of the safety arm when lowering the platform.**

8. Inspect the center chassis area and scissor arms for burnt, chafed and pinched cables.

9. Inspect the following areas for burnt, chafed, corroded, pinched and loose wires:
   - Scissor arms
   - ECM to platform controls
   - Power to platform wiring

10. Inspect for a liberal coating of dielectric grease in all connections between the ECM and the platform controls.

11. Raise the platform and return the safety arm to the stowed position.

12. Lower the platform to the stowed position and turn the machine off.
B-3  
Inspect the Tires and Wheels (including castle nut torque)

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining the tires and wheels in good condition is essential to safe operation and good performance. Tire and/or wheel failure could result in a machine tip-over. Component damage may also result if problems are not discovered and repaired in a timely fashion.

1. Check the tire surface and sidewalls for cuts, cracks, punctures and unusual wear.
2. Check each wheel for damage, bends and cracks.
3. Remove the cotter pin and check each castle nut for proper torque. Refer to Section 2, Specifications.
   Note: Always replace the cotter pin with a new one when removing the castle nut or when checking the torque of the castle nut.
4. Install a new cotter pin. Bend the cotter pin to lock it in place.

B-4  
Test the Emergency Stop

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

A properly functioning Emergency Stop is essential for safe machine operation. An improperly operating red Emergency Stop button will fail to shut off power and stop all machine functions, resulting in a hazardous situation.

Note: As a safety feature, selecting and operating the ground controls will override the platform controls, except the platform red Emergency Stop button.

1. Turn the key switch to ground control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
2. Push in the red Emergency Stop button at the ground controls to the off position.
   ○ Result: No machine functions should operate.
3. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
4. Push down the red Emergency Stop button at the platform controls to the off position.
   ○ Result: No machine functions should operate.

Note: The red Emergency Stop button at the ground controls will stop all machine operation, even if the key switch is switched to platform control.
B-5
Test the Key Switch

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Proper key switch action and response is essential to safe machine operation. The machine can be operated from the ground or platform controls and the activation of one or the other is accomplished with the key switch. Failure of the key switch to activate the appropriate control panel could cause a hazardous operating situation.

Note: Perform this procedure from the ground using the platform controls. Do not stand in the platform.

1. Pull out the red Emergency Stop button to the on position at both the ground and platform controls.
2. Turn the key switch to platform control.
3. Check the platform up/down function from the ground controls.
   - Result: The machine functions should not operate.
4. Turn the key switch to ground control.
5. Check the machine functions from the platform controls.
   - Result: The machine functions should not operate.
6. Turn the key switch to the off position.
   - Result: No function should operate.

B-6
Test the Automotive-style Horn (if equipped)

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

The horn is activated at the platform controls and sounds at the ground as a warning to ground personnel. An improperly functioning horn will prevent the operator from alerting ground personnel of hazards or unsafe conditions.

1. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
2. Push down the horn button at the platform controls.
   - Result: The horn should sound.
Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Proper brake action is essential to safe machine operation. The drive brake function should operate smoothly, free of hesitation, jerking and unusual noise. Hydraulically-released individual wheel brakes can appear to operate normally when not fully operational.

Perform this procedure with the machine on a firm level surface that is free of obstructions, with the platform extension deck fully retracted and the platform in the stowed position.

1. Mark a test line on the ground for reference.
2. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
3. Lower the platform to the stowed position.
4. Press the drive function select button.
5. Choose a point on the machine; i.e., contact patch of a tire, as a visual reference for use when crossing the test line.
6. Bring the machine to top drive speed before reaching the test line. Release the function enable switch or the joystick when your reference point on the machine crosses the test line.
7. Measure the distance between the test line and your machine reference point. Refer to Section 2, Specifications.
   - Result: The machine stops within the specified braking distance. No action required.
   - Result: The machine does not stop within the specified braking distance. Proceed to step 8 and determine if the machine is equipped with a dynamic braking valve.

Note: The brakes must be able to hold the machine on any slope it is able to climb.

8. Disconnect the battery pack from the machine.

   **WARNING**
   Electrocuton/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

9. Locate the drive forward/reverse valve on the function manifold. Refer to Illustrations 2 and 3.
10 Tag the forward and the reverse valve coils. Remove the coils from the valve.

Note: The forward valve coil has white and brown wires attached.

Note: The reverse valve coil has white/black and brown wires attached.

Note: For reassembly, it will be helpful to leave the wire harness attached to the valve coils.

For GS-1530, GS-1532, GS-1930 and GS-1932 (all models) proceed to step 11.

For GS-2032 and GS-2632 before serial number GS3204-51608 proceed to step 11.

For GS-2046, GS-2646 and GS-3246 before serial number GS4604-60000 proceed to step 11.

For GS-2032 and GS-2632 after serial number GS3204-51607 proceed to step 21.

For GS-2046, GS-2646 and GS-3246 after serial number GS4604-59999 proceed to step 21.

11 Remove the drive forward/reverse valve from the function manifold. Cap the open port of the manifold.

12 Carefully inspect the hex portion of the valve for an identification stamp.

○ Result: SV10-4727 is stamped on the hex portion of the drive forward/reverse valve. This indicates the machine is equipped with a dynamic brake valve. Proceed to step 13.

☒ Result: SV10-4727 is not stamped on the hex portion of the drive forward/reverse valve. This indicates the machine is not equipped with a dynamic brake valve. Proceed to step 18.

13 Install the drive forward/reverse valve removed in step 11 into the function manifold and securely tighten. Torque to 25 ft-lbs / 34 Nm.

14 In order, install the reverse valve coil (with white/black and brown wires), spacer washer and the forward valve coil (with white and brown wires) onto the valve.

Note: For the machine to function correctly, the reverse valve coil must be closest to the manifold.

15 Install the coil nut onto the valve and tighten. Torque to 60 in-lbs / 7 Nm.

16 Connect the battery pack to the machine.

17 Replace the brakes and repeat this procedure beginning with step 1. Refer to Repair Procedure 9-1, How to Remove a Drive Brake. Repeat this procedure beginning with step 1.

18 Contact the Genie Industries Service Parts Department and order kit part number 105457.

19 Install the new valve received in the kit and mark the new valve with a white paint pen to identify new valve installation.

20 Repeat this procedure beginning with step 1.

If the machine fails to stop within the specified stopping distance after installing new brakes, please contact the Genie Industries Scissors Service Department, 1-800-536-1800 Ext. 8710.
21 Remove the drive forward/reverse valve from the function manifold. Cap the open port of the manifold.

22 Carefully inspect the hex portion of the valve for an identification stamp.

- Result: SV10-5905 is stamped on the hex portion of the drive forward/reverse valve. This indicates the machine is equipped with a dynamic brake valve. Proceed to step 23.

- Result: SV10-5905 is not stamped on the hex portion of the drive forward/reverse valve. This indicates the machine is not equipped with a dynamic brake valve. Proceed to step 28.

23 Install the drive forward/reverse valve removed in step 20 into the function manifold and securely tighten. Torque to 25 ft-lbs / 34 Nm.

24 In order, install the reverse valve coil (with white/black and brown wires), spacer washer and the forward valve coil (with white and brown wires) onto the valve.

Note: For the machine to function correctly, the reverse valve coil must be closest to the manifold.

25 Install the coil nut onto the valve and tighten. Torque to 60 in-lbs 7 Nm.

26 Connect the battery pack to the machine.

27 Replace the brakes and repeat this procedure beginning with step 1. Refer to Repair Procedure 9-1, How to Remove a Drive Brake. Repeat this procedure beginning with step 1.

28 Contact the Genie Industries Service Parts Department and order kit part number 105458.

29 Install the new valve received in the kit and mark the new valve with a white paint pen to identify new valve installation.

30 Repeat this procedure beginning with step 1.

If the machine fails to stop within the specified stopping distance after installing new brakes, please contact the Genie Industries Scissors Service Department, 1-800-536-1800 Ext. 8710.
Section 3 • Scheduled Maintenance Procedures

B-8
Test the Drive Speed - Stowed Position

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Proper drive functions are essential to safe machine operation. The drive function should respond quickly and smoothly to operator control. Drive performance should also be free of hesitation, jerking and unusual noise over the entire proportionally controlled speed range.

Note: Perform this procedure with the machine on a firm, level surface that is free of obstructions.

1 Create start and finish lines by marking two lines on the ground 40 feet / 12.2 m apart.

2 Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

3 Lower the platform to the stowed position.

4 Press the drive function select button.

5 Choose a point on the machine; i.e., contact patch of a tire, as a visual reference for use when crossing the start and finish lines.

6 Bring the machine to top drive speed before reaching the start line. Begin timing when your reference point on the machine crosses the start line.

7 Continue at full speed and note the time when your reference point on the machine passes over the finish line. Refer to Section 2, Specifications.
Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Proper drive functions are essential to safe machine operation. The drive function should respond quickly and smoothly to operator control. Drive performance should also be free of hesitation, jerking and unusual noise over the entire proportionally controlled speed range.

Note: Perform this procedure with the machine on a firm, level surface that is free of obstructions.

1 Create start and finish lines by marking two lines on the ground 40 feet / 12.2 m apart.

2 Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

3 Press the lift function select button.

4 Press and hold the function enable switch on the joystick.

5 Raise the platform approximately 4 feet / 1.2 m from the ground.

6 Press the drive function select button.

7 Choose a point on the machine; i.e., contact patch of a tire, as a visual reference for use when crossing the start and finish lines.

8 Bring the machine to top drive speed before reaching the start line. Begin timing when your reference point on the machine crosses the start line.

9 Continue at full speed and note the time when your reference point on the machine passes over the finish line. Refer to Section 2, Specifications.
B-10
Perform Hydraulic Oil Analysis

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Replacement or testing of the hydraulic oil is essential for good machine performance and service life. Dirty oil may cause the machine to perform poorly and continued use may cause component damage. Extremely dirty conditions may require oil changes to be performed more often. Refer to Section 2, Specifications.

Before replacing the hydraulic oil, the oil may be tested by an oil distributor for specific levels of contamination to verify that changing the oil is necessary.

If the hydraulic oil is not replaced at the two year inspection, test the oil quarterly. Replace the oil when it fails the test. See E-1, Test or Replace the Hydraulic Oil.

B-11
Inspect the Hydraulic Tank Cap Venting System

Genie requires that this procedure be performed quarterly or every 250 hours, whichever comes first. Perform this procedure more often if dusty conditions exist.

A free-breathing hydraulic tank cap is essential for good machine performance and service life. A dirty or clogged cap may cause the machine to perform poorly. Extremely dirty conditions may require that the cap be inspected more often.

1. Remove the breather cap from the hydraulic tank.
2. Check for proper venting.
   - Result: Air passes through the breather cap.
   - Result: If air does not pass through the cap, clean or replace the cap. Proceed to step 3.
3. Using a mild solvent, carefully wash the cap venting system. Dry using low pressure compressed air. Repeat step 2.
4. Install the breather cap onto the hydraulic tank.
B-12
Check the Module Tray Latch Components

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining the module tray latch components in good condition is essential to good performance and service life. Failure to detect worn out latch components may result in module trays opening unexpectedly, creating an unsafe operating condition.

1. Inspect each module tray rotary latch and related components for wear. Tighten any loose fasteners.

2. Lubricate each module tray rotary latch. Using light oil, apply a few drops to each of the springs and to the sides of the rotary latch mechanism.
B-13
Inspect the Voltage Inverter (if equipped)

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

1. Inspect the inverter plug and pigtail for damage or excessive insulation wear. Replace as required.

2. Turn the key switch to the on position and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

3. Connect an appropriate power tool to the inverter. Activate the tool.

Result: The power tool should operate. There may be a brief (0.5 second) delay if the power tool has not been used in the previous 10 minutes.

If the left fault LED (REV_POL) is illuminated, the inverter is connected to batteries with the incorrect polarity. Correct the polarity issue with the red wire to battery positive and the black wire to battery negative. The inverter will then operate correctly and begin supplying AC power.

If the right fault LED (123) blinks one time, the power draw is too high. The tool being used requires too much power to operate or is being used at or near the limit of the inverter for an extended period of time. Reduce the power draw. The inverter will then operate correctly and begin supplying AC power.

If the right fault LED (123) blinks two times, the Ground Fault Interrupt (GFI) has been activated. A short circuit or partial short exists between the AC hot and ground in the tool or outlet. Check the tool for burnt, chafed, corroded and loose wires, and inspect the tool for internal moisture. Correct the short circuit or moisture issue OR inspect the wiring in the power-to-platform box. The inverter will then operate correctly and begin supplying AC power.

If right fault LED (123) blinks three times, the inverter is overheated. Allow the inverter to cool. The inverter will then operate correctly and begin supplying AC power.

If the battery 25 volt fault LED (25V) blinks one time, the battery voltage is over 30V. Operate the machine to lower the voltage level. The inverter will then operate correctly and begin supplying AC power.

If the battery 21 volt fault LED (21V) blinks one time, the battery voltage is less than 20V DC. The inverter will continue to operate until the battery voltage falls to 17.8V DC.
Test the Down Limit Switch and the Pothole Limit Switches

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining the limit switches is essential to safe operation and good machine performance. Operating the machine with a faulty limit switch could result in reduced machine performance and a potentially unsafe operating condition.

Perform these procedures with the machine on a firm, level surface that is free of obstructions.

Down Limit Switch

1. Remove the platform controls from the platform.
2. Raise the platform 7 to 8 feet / 2.1 to 2.4 m.
3. Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.
4. Lower the platform onto the safety arm. Crushing hazard. Keep hands clear of the safety arm when lowering the platform.
5. Turn the key switch to the off position.
6. Tag and disconnect the platform control box at the platform.
7. GS-1530/32 and GS-1930/32: Follow the platform control cable down the scissor stack to the alarm bracket on the chassis deck. Tag and disconnect the platform control cable from the ECM cable at the 6-pin Deutsch connector.
8. Securely install the platform control box harness plug into the 6-pin Deutsch connector of the ECM cable.
9. GS-2032, GS-2632, GS-3232, GS-2046, GS-2646 and GS-3246: Follow the platform control cable down the scissor stack to the underside of the chassis deck. Tag and disconnect the platform cable from the ECM cable at the 6-pin Deutsch connector under the chassis deck.
10. Turn the key switch to the off position.
11. Raise the platform and return the safety arm to the stowed position.
12. Working at the platform controls, press the lift function select button. Lower the platform to the stowed position.

- Result: The diagnostic display will show code 18, an alarm sounds and the lift function should operate. The machine is functioning correctly.
- Result: The diagnostic display does not show code 18, the alarm does not sound and the lift function should not operate. Replace the down limit switch.
13 Press the drive function select button. Attempt to drive the machine.

- Result: The diagnostic display will show code 18, an alarm sounds, and the steer and drive functions should not operate. The machine is functioning correctly.

- Result: The diagnostic display does not show code 18, the alarm does not sound, and the steer and drive functions operate. Replace the down limit switch.

14 Press the lift function select button. Raise the platform approximately 12 inches / 0.3 m.

- Result: The diagnostic display will show code 18 and an alarm sounds. The machine is functioning correctly.

- Result: The diagnostic display does not show code 18 and the alarm does not sound. Replace the down limit switch.

15 Raise the platform until the pothole guards are deployed.

- Result: The diagnostic display does not show code 18 and the alarm does not sound. The machine is functioning correctly.

- Result: The diagnostic display shows code 18 and an alarm sounds. Replace the down limit switch.

16 Raise the platform 7 to 8 feet / 2.1 to 2.4 m.

17 Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.

18 Lower the platform onto the safety arm.

- WARNING Crushing hazard. Keep hands clear of the safety arm when lowering the platform.

19 Turn the key switch to the off position.

20 Disconnect the platform controls from the ECM cable.

21 Securely install the connector of the ECM cable into the platform control cable.

22 Working at the platform, securely install the connector of the platform controls into the platform control cable.

23 Enable the down limit switch. Loosen the fastener securing the roller arm to the limit switch, and rotate the roller arm 90 degrees in an upwards direction. Do not activate the switch contacts.

24 Turn the key switch to platform control.

25 Raise the platform and return the safety arm to the stowed position.

26 Lower the platform to the stowed position.
Pothole Limit Switches

27 Move the machine onto a grade which exceeds the rating of the level sensor. Refer to the serial label on the machine.

28 Press the lift function select button. Standing on the up-hill side of the machine, attempt to raise the platform to approximately 8 feet / 2.4 m.

☑ Result: The diagnostic display shows code LL, an alarm sounds, and the machine stops lifting after the pothole guards are deployed. The machine is functioning correctly.

☒ Result: The diagnostic display does not show code LL, the alarm does not sound and the machine will continue to lift the platform after the pothole guards are deployed. Adjust or replace the pothole limit switch.

29 Press the drive function select button. Standing on the up-hill side of the machine, attempt to steer and drive the machine.

☑ Result: The diagnostic display shows code LL, an alarm sounds, and the machine will not steer or drive. The machine is functioning correctly.

☒ Result: The diagnostic display does not show code LL, the alarm does not sound and the steer and drive functions operate. Adjust or replace the down limit switch.

30 Lower the platform to the stowed position. Move the machine onto a firm, level surface.

31 Place a wooden block approximately 2 inches / 5 cm tall under the right pothole guard.

32 Press the lift function select button. Attempt to raise the platform approximately 8 feet / 2.4 m.

☑ Result: The pothole guard contacts the block and does not fully deploy, the diagnostic display shows code 18, an alarm sounds and the platform will lift to 8 feet / 2.4 m or beyond. The machine is functioning correctly.

☒ Result: The pothole guard contacts the block and does not fully deploy, the diagnostic display does not show code 18, the alarm does not sound and the machine will continue to lift the platform after the pothole guards are deployed. Adjust or replace the pothole limit switch.

33 Press the drive function select button. Attempt to steer or drive the machine.

☑ Result: The diagnostic display shows code 18, an alarm sounds, and the machine will not steer or drive. The machine is functioning correctly.

☒ Result: The diagnostic display does not show code 18, the alarm does not sound and the steer and drive functions operate. Adjust or replace the down limit switch.

34 Lower the platform to the stowed position and remove the block under the right pothole guard.

35 Repeat this procedure beginning with step 31 for the left pothole guard.

36 Lower the platform to the stowed position, remove the block under the left pothole guard and turn off the machine.
Test the Up Limit Switch (if equipped)

Genie requires that this procedure be performed every 250 hours or quarterly, whichever comes first.

Maintaining the limit switches is essential to safe operation and good machine performance. Operating the machine with a faulty limit switch could result in reduced machine performance and a potentially unsafe operating condition.

Perform these procedures with the machine on a firm, level surface that is free of obstructions.

**Up Limit Switch (if equipped)**

1. Turn the key switch to ground control and raise the platform approximately 8 feet / 2.4 m from the ground.
2. Rotate the safety arm away from the machine and let it hang down.
3. Lower the platform onto the safety arm.

   **WARNING** Crushing hazard. Keep hands clear of the safety arm when lowering the platform.

4. While raising the platform from the ground controls, push the arm of the up limit switch towards the steer end of the machine to activate the limit switch.

- Result: The platform stops raising. The machine is functioning properly.
- Result: The platform continues to raise. Adjust or replace the up limit switch.
C-1
Test the
Platform Overload System
(if equipped)

Genie specifications require that this procedure be performed every 500 hours or six months, whichever comes first OR when the machine fails to lift the maximum rated load.

Testing the platform overload system regularly is essential to safe machine operation. Continued use of an improperly operating platform overload system could result in the system not sensing an overloaded platform condition. Machine stability could be compromised resulting in the machine tipping over.

The platform overload system is designed to prevent machine operation in the event the machine is overloaded. Models equipped with the platform overload option are provided with two additional machine control components: the overload pressure switch and a maximum height limit switch.

The overload pressure switch, which is adjustable and located at the barrel-end of the lift cylinder, is used to determine when the hydraulic lift cylinder requires too much pressure to support the load inside the platform. When this occurs, the pressure switch will send a signal to the ECM, which will not allow the machine to function until the extra weight is removed from the platform.

The maximum height limit switch, located in the middle of the drive chassis under the scissor arms, is used to disable the lift valve coil when the platform is near maximum height. When activated, the limit switch keeps the lift cylinder from going over lift relief which would cause the pressure switch to falsely indicate an overload condition.
1 Locate the lift valve coil on the function manifold.

5 Fully raise the platform. Release the toggle switch.

- Result: The alarm should sound.
- Result: The alarm does not sound. Calibrate the platform overload system. Refer to Repair Procedure 11-1, Calibrate the Platform Overload System (if equipped).

6 Disconnect the two blue/black wires of the manifold wire harness at the lift valve coil on the manifold.

7 Using the manual lowering knob, lower the platform to the stowed position.

8 Securely connect the black and white wires of the up limit switch wire harness to the two blue/black wires of the manifold wire harness at the lift valve coil on the manifold.

9 Fully raise the platform. Release the toggle switch.

- Result - models with software revision A0 and A1: The alarm should not sound and fault code 54 should be present in the diagnostic display. The system is functioning correctly.
- Result - models with software revision A2 and higher: The alarm should not sound. The system is functioning correctly.
- Result - all models: The alarm sounds. The system is not functioning correctly. Troubleshoot the limit switch, limit switch wire harness or limit switch mount bracket OR the platform overload system needs to be calibrated. Refer to Repair Procedure 11-1, Calibrate the Platform Overload System (if equipped).

Note: To determine the software revision level, refer to Repair Procedure 1-2, How to Determine the Revision Level.

10 Lower the platform to the stowed position.
C-2
Replace the
Hydraulic Tank Breather Cap -
Models with Optional Hydraulic Oil

Genie requires that this procedure be performed every 500 hours or semi-annually, whichever comes first.

The hydraulic tank is a vented-type tank. The breather cap has an internal air filter that can become clogged or, over time, can deteriorate. If the breather cap is faulty or improperly installed, impurities can enter the hydraulic system which may cause component damage. Extremely dirty conditions may require that the cap be inspected more often.

1. Remove and discard the hydraulic tank breather cap.
2. Install and new cap onto the tank.
Checklist D Procedures

D-1
Check the Scissor Arm Wear Pads

Genie requires that this procedure be performed every 1000 hours or annually, whichever comes first.

Maintaining the scissor arm wear pads in good condition is essential to safe machine operation. Continued use of worn out wear pads may result in component damage and unsafe operating conditions.

Note: Perform this procedure with the platform in the stowed position.

GS-1530, GS-1532, GS-1930 and GS-1932:

1 Measure the distance between the number one outer arm cross tube and the chassis deck at the ground controls side of the non-steer end of the machine.

☐ Result: The measurement is 0.90 inch / 22.9 mm or more. Proceed to step 2.

☒ Result: The measurement is less than 0.90 inch / 22.9 mm. Replace both wear pads. Refer to Repair Procedure 3-1 or 3-2, How to Replace the Scissor Arm Repair Pads.

2 Measure the distance between the number one outer arm cross tube and the chassis deck at the battery pack side of the non-steer end of the machine.

☐ Result: The measurement is 0.90 inch / 22.9 mm or more. Proceed to step 3.

☒ Result: The measurement is less than 0.90 inch / 22.9 mm. Replace both wear pads. Refer to Repair Procedure 3-1 or 3-2, How to Replace the Scissor Arm Repair Pads.

3 Apply a thin layer of dry film lubricant to the area of the chassis where the scissor arm wear pads make contact.

GS-2032, GS-2632, GS-2046, GS-2646 and GS-3246:

1. Measure the distance between the number one outer arm cross tube and the fork lift tube at the ground controls side of the non-steer end of the machine.

- Result: The measurement is 0.88 inch / 22.4 mm or more. Proceed to step 2.
- Result: The measurement is less than 0.88 inch / 22.4 mm. Replace both wear pads. Refer to Repair Procedure 3-3, 3-4 or 3-5, How to Replace the Scissor Arm Repair Pads.

2. Measure the distance between the number one outer arm cross tube and the fork lift tube at the battery pack side of the non-steer end of the machine.

- Result: The measurement is 0.88 inch / 22.4 mm or more. Proceed to step 3.
- Result: The measurement is less than 0.88 inch / 22.4 mm. Replace both wear pads. Refer to Repair Procedure 3-3, 3-4 or 3-5, How to Replace the Scissor Arm Repair Pads.

3. Apply a thin layer of dry film lubricant to the area of the chassis where the scissor arm wear pads make contact.

Replace the Hydraulic Tank Return Filter

Genie requires that this procedure be performed every 1000 hours or annually, whichever comes first.

Replacement of the hydraulic tank return filter is essential for good machine performance and service life. A dirty or clogged filter may cause the machine to perform poorly and continued use may cause component damage. Extremely dirty conditions may require that the filter be replaced more often.

**CAUTION** Beware of hot oil. Contact with hot oil may cause severe burns.

Note: The hydraulic tank return filter is mounted on the function manifold next to the hydraulic power unit.

1. Clean the area around the oil filter. Remove the filter with an oil filter wrench.
2. Apply a thin layer of oil to the new oil filter gasket.
3. Install the new filter and tighten it securely by hand.
4. Use a permanent ink marker to write the date and number of hours from the hour meter onto the filter.
5. Turn the key switch to ground control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
6. Activate and hold the platform up toggle switch.
7. Inspect the filter and related components to be sure that there are no leaks.
8. Clean up any oil that may have spilled.

Checklist E Procedure

E-1
Test or Replace the Hydraulic Oil

Genie requires that this procedure be performed every 2000 hours or every two years, whichever comes first.

Replacement or testing of the hydraulic oil is essential for good machine performance and service life. Dirty oil may cause the machine to perform poorly and continued use may cause component damage. Extremely dirty conditions may require oil changes to be performed more often. Refer to Section 2, Specifications.

Before replacing the hydraulic oil, the oil may be tested by an oil distributor for specific levels of contamination to verify that changing the oil is necessary.

If the hydraulic oil is not replaced at the two year inspection, test the oil quarterly. Replace the oil when it fails the test.

Note: Perform this procedure with the platform in the stowed position.

1 Disconnect the battery pack from the machine. Electrocuton/burn hazard. Contact with hot or live circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2 Open the power unit module tray.

3 Tag and disconnect the hydraulic tank return hard line from the hydraulic filter head and remove the hard line from the tank. Cap the fitting on the filter head.

4 Tag and disconnect the hydraulic pump inlet hard line and remove the hard line from the tank. Cap the fitting on the pump.

5 Remove the hydraulic tank retaining fasteners and remove the hydraulic tank from the machine.

6 Drain all of the oil into a suitable container. Refer to Section 2, Specifications, for capacity information.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

7 Clean up any oil that may have spilled. Properly discard the used oil.

8 Clean the inside of the hydraulic tank using a mild solvent. Allow the tank to dry completely.

9 Install the hydraulic tank and install and tighten the hydraulic tank retaining fasteners. Torque to specification.

---

**Torque specifications**

<table>
<thead>

<td>35 in-lbs (4 Nm)</td>
</tr>
<tr>
<td>Hydraulic tank retaining fasteners, lubricated</td>
<td>26 in-lbs (2.9 Nm)</td>
</tr>
</tbody>
</table>
10 Install the hydraulic pump inlet hard line into the tank. Install the fitting onto the pump and torque to specification. Refer to Section 2, Specifications.

11 Install the hydraulic pump return hard line into the tank. Install the fitting onto the hydraulic filter head and torque to specification. Refer to Section 2, Specifications.

12 Fill the tank with hydraulic oil until the fluid is at the FULL indicator on the hydraulic tank. Do not overfill.

13 Activate the pump to fill the hydraulic system with oil and bleed the system of air.

**NOTICE** Component damage hazard. The pump can be damaged if operated without oil. Be careful not to empty the hydraulic tank while in the process of filling the hydraulic system. Do not allow the pump to cavitate.

14 Repeat steps 12 through 13 until the hydraulic system and tank are both full.
Observe and Obey:

- Repair procedures shall be completed by a person trained and qualified on the repair of this machine.
- Immediately tag and remove from service a damaged or malfunctioning machine.
- Repair any machine damage or malfunction before operating the machine.

Before Repairs Start:

- Read, understand and obey the safety rules and operating instructions in the appropriate operator’s manual on your machine.
- Be sure that all necessary tools and parts are available and ready for use.
- Use only Genie approved replacement parts.
- Read each procedure completely and adhere to the instructions. Attempting shortcuts may produce hazardous conditions.
- Unless otherwise specified, perform each repair procedure with the machine in the following configuration:
  - Machine parked on a firm, level surface
  - Platform in the stowed position
  - Key switch in the off position with the key removed
  - The red Emergency Stop button in the off position at both ground and platform controls
  - Wheels chocked
  - All external AC power supply disconnected from the machine

About This Section

Most of the procedures in this section should only be performed by a trained service professional in a suitably equipped workshop. Select the appropriate repair procedure after troubleshooting the problem.

Perform disassembly procedures to the point where repairs can be completed. Then to re-assemble, perform the disassembly steps in reverse order.

Symbols Legend

- Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.
- Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.
- Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.
- Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.
- Indicates a potentially hazardous situation which, if not avoided, may result in property damage.
- Indicates that a specific result is expected after performing a series of steps.
- Indicates that an incorrect result has occurred after performing a series of steps.
Platform Controls

The platform controls, used to operate the machine from the platform or while standing on the ground, can also be used to tune the performance of the machine.

Moving the joystick or activating a button sends a signal to the Electronic Control Module (ECM). When the ECM is in the function mode, the platform controls are used to operate the various machine functions. When the ECM is in the programming mode (PS is shown in the diagnostic display window), the platform controls are used to adjust the function speed parameters.

The platform controls consist of an electronic circuit board, joystick, membrane decal, buttons, LEDs and, on models with a Gen 5 controller, a diagnostic display.

For further information or assistance, consult the Genie Industries Service Department.

1-1
Circuit Boards

How to Remove the Platform Controls Circuit Board

1. Push in the red Emergency Stop button to the off position at both the ground and platform controls.

2. Remove the fasteners securing the platform control box together. Open the control box.

3. Locate the circuit board mounted to the top half of the platform control box.

**WARNING**
Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

**NOTICE**
Component damage hazard. Electrostatic discharge (ESD) can damage printed circuit board components. Maintain firm contact with a metal part of the machine that is grounded at all times when handling printed circuit boards OR use a grounded wrist strap.

4. Carefully disconnect the wire harness connectors from the circuit board.

5. Carefully remove the circuit board retaining fasteners and remove the circuit board from the control box.
1-2
Controller Adjustments

Platform lift speed, stowed drive speed, raised drive speed and high torque drive speed are adjustable to compensate for wear in the hydraulic pump and drive motors.

The function speeds are determined by the percentage of total controller output.

For further information or assistance, consult the Genie Industries Service Department.

⚠️ **DANGER** Tip-over hazard. Do not adjust the lift and/or drive speed higher than specified in this procedure. Setting the function speeds greater than specifications could cause the machine to tip over resulting in death or serious injury.

⚠️ **DANGER** Tip-over hazard. This procedure must only be performed by a trained service professional. Attempting this procedure without the necessary skills will result in death or serious injury.

Note: Select a test area that is firm, level and free of obstructions.

**How to Determine the Software Revision Level**

1. Remove the platform controls from the platform.
2. Place the platform controls close to the diagnostic display on the power unit side of the machine.
3. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

4. Press the lift function select button.

   - Gen 4 platform controller
     - a yellow arrow
     - b joystick controller JC1
     - c lift function select button BN9
     - d red Emergency Stop button P2
     - e platform controls diagnostic display

5. Slowly move the joystick in the direction indicated by the yellow arrow.
   - ⚪️ Result: The software revision level will appear in the diagnostic display.
   - ⚪️ Result: If the software revision level does not appear in the diagnostic display, turn the key switch to ground control and move the platform lift switch in the down direction. The software revision level will appear in the diagnostic display.

6. Push in the red Emergency Stop button to the off position at both the ground and platform controls and turn the key switch to the off position.
How to Adjust the Lift Speed

**DANGER** Tip-over hazard. Do not adjust the lift and/or drive speed higher than specified in this procedure. Setting the function speeds greater than specifications could cause the machine to tip over resulting in death or serious injury.

**DANGER** Tip-over hazard. This procedure must only be performed by a trained service professional. Attempting this procedure without the necessary skills will result in death or serious injury.

1. Pull out the red Emergency Stop button to the on position at the ground controls.

2. Push in the red Emergency Stop button to the off position at the platform controls.

3. Turn the key switch to platform control.

4. At the platform controls, press and hold the lift function select and horn buttons and pull out the red Emergency Stop button to the on position.

   - **Result:** The diagnostic display will show "PS."

5. Release the lift function select and horn buttons.

   - **Result:** The diagnostic display will show the maximum lift speed percentage.

6. Press the lift function select button.

7. Use the steering thumb rocker switch on the joystick to increase or decrease the maximum lift speed percentage. Refer to Section 2, Specifications, for function speeds.

8. Turn the key switch to the off position.

   Note: Any change in software settings will not take effect until the key switch is turned to the off position.
How to Adjust the Stowed Drive Speed

**DANGER** Tip-over hazard. Do not adjust the lift and/or drive speed higher than specified in this procedure. Setting the function speeds greater than specifications could cause the machine to tip over resulting in death or serious injury.

**DANGER** Tip-over hazard. This procedure must only be performed by a trained service professional. Attempting this procedure without the necessary skills will result in death or serious injury.

1. Pull out the red Emergency Stop button to the on position at the ground controls.
2. Push in the red Emergency Stop button to the off position at the platform controls.
3. Turn the key switch to platform control.
4. At the platform controls, press and hold the lift function select and horn buttons and pull out the red Emergency Stop button to the on position.
   - Result: The diagnostic display will show “PS.”
5. Release the lift function select and horn buttons.
   - Result: The diagnostic display will show the maximum lift speed percentage.
6. Press the drive function select button.
   - Result: The diagnostic display will show the stowed drive speed percentage.
7. Use the steering thumb rocker switch on the joystick to increase or decrease the stowed drive speed percentage. Refer to Section 2, Specifications, for function speeds.
8. Turn the key switch to the off position.

Note: Any change in software settings will not take effect until the key switch is turned to the off position.
How to Adjust the Raised Drive Speed

**DANGER** Tip-over hazard. Do not adjust the lift and/or drive speed higher than specified in this procedure. Setting the function speeds greater than specifications could cause the machine to tip over resulting in death or serious injury.

**DANGER** Tip-over hazard. This procedure must only be performed by a trained service professional. Attempting this procedure without the necessary skills will result in death or serious injury.

1. Pull out the red Emergency Stop button to the on position at the ground controls.
2. Push in the red Emergency Stop button to the off position at the platform controls.
3. Turn the key switch to platform control.
4. At the platform controls, press and hold the lift function select and horn buttons and pull out the red Emergency Stop button to the on position.
   - **Result:** The diagnostic display will show “PS.”
5. Release the lift function select and horn buttons.
   - **Result:** The diagnostic display will show the maximum lift speed percentage.
6. Press and hold the horn button.
   - **Result:** The diagnostic display will show the raised drive speed percentage.

7. Use the steering thumb rocker switch on the joystick to increase or decrease the maximum lift speed percentage. Refer to Section 2, Specifications, for function speeds.
8. Turn the key switch to the off position.

Note: Any change in software settings will not take effect until the key switch is turned to the off position.
How to Adjust the High Torque Drive Speed

Tip-over hazard. Do not adjust the lift and/or drive speed higher than specified in this procedure. Setting the function speeds greater than specifications could cause the machine to tip over resulting in death or serious injury.

Tip-over hazard. This procedure must only be performed by a trained service professional. Attempting this procedure without the necessary skills will result in death or serious injury.

This procedure does not apply for the GS-1530/32 and GS-1930/32 models, as they are not equipped with the high torque drive speed function.

1. Pull out the red Emergency Stop button to the on position at the ground controls.
2. Push in the red Emergency Stop button to the off position at the platform controls.
3. Turn the key switch to platform control.
4. At the platform controls, press and hold the lift function select and horn buttons and pull out the red Emergency Stop button to the on position.
   - Result: The diagnostic display will show “PS.”
5. Release the lift function select and horn buttons.
   - Result: The diagnostic display will show the maximum lift speed percentage.
6. Press the drive function select button.
   - Result: The diagnostic display will show the stowed drive speed percentage.

7. Press and hold the machine on incline button.
   - Result: The diagnostic display will show the stowed high torque drive speed percentage.
8. Use the steering thumb rocker switch on the joystick to increase or decrease the stowed high torque drive speed percentage.
9. Turn the key switch to the off position.

Note: Any change in software settings will not take effect until the key switch is turned to the off position.
1-3
Software Configuration
(before serial numbers GS3005-75000, GS3205-75000 and GS4605-75000)

The ECM (Electronic Control Module) contains programming for all configurations of the Genie GS-30, GS-32 and GS-46. The machine can be adjusted to a different configuration by changing the toggle settings on the DIP switch. The DIP switch is located on the circuit board inside the platform control box.

DIP switches have two positions - on and off. When reading the DIP switch code in the DIP Switch Code Chart, the on and the off are represented by the numbers 1 (on) and 0 (off).

How to Determine the DIP Switch Configuration

1. Remove the platform controls from the platform.
2. Place the platform controls close to the diagnostic display on the power unit side of the machine.
3. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
4. Press and hold the lift function enable button OR press the lift function select button.
5. Slowly move the joystick in the direction indicated by the blue arrow.
6. Result: The DIP switch configuration will appear in the diagnostic display.

Machine Option Definitions

Motion Beacon: The motion beacon option flashes only when operating a function.

Motion Alarm: The motion alarm will sound when operating any function.

Lift/Drive Cut Out: This cuts out lift and drive functions when the machine exceeds the rating on the serial plate. Configured on all machines.

Platform Overload: This cuts out all functions when the pressure sensor is overloaded. The additional weight must be removed from the platform before any function can be resumed. Required for CE models.

Descent Delay: This option halts descent at approximately 7 feet / 2.1 m. All controls must be released for 4 to 6 seconds before descent is re-enabled. Required for CE models.

Battery Drain Alarm: When the machine is turned on and no function is activated for 10 minutes, the alarm will sound once every 3 seconds. This option can be activated by moving DIP switch 7 to position 1. When this option is configured, the flashing dot in the diagnostic display window will remain continuously illuminated when the lift mode is selected and activated.
How to Set the DIP Switch Codes

**DANGER** Tip-over hazard. Do not adjust the DIP switch settings to other than what is specified in this procedure. Exceeding specifications could cause the machine to tip over resulting in death or serious injury.

If replacing the circuit board, note the toggle positions on the DIP switch. Set the DIP switch on the new circuit board to the same configuration as the old board.

1. Push in the red Emergency Stop button to the off position at the ground and platform controls. Turn the key switch to the off position.
2. Remove the fasteners securing the top of the platform controls and open the platform control box.
3. Rotate the platform control box to the position shown to correctly identify the configuration of the DIP switch settings.
4. Locate the DIP switch on the circuit board. Move the DIP switch settings to correspond with the configuration of the machine options, indicated in the *DIP Switch Code Chart*.
5. Close the lid and install the fasteners.
6. Confirm the settings. See 1-3, *How to Determine the DIP Switch Configuration*.
7. Push in the red Emergency Stop button to the off position at both the ground and platform controls and turn the key switch to the off position.

Note: Any change in DIP settings will not take effect until the key switch is turned to the off position.

Software Configuration
(after serial numbers GS3005-74999, GS3205-74999 and GS4605-74999)

The Electronic Control Module (ECM) contains programming for all configurations of the Genie GS-30, GS-32 and GS-46. The machine can be adjusted to a different configuration using the buttons at the platform controls.

How to Determine the Software Configuration

1. Remove the platform controls from the platform.
2. Pull out the red Emergency Stop button to the on position at the ground controls.
3. Push in the red Emergency Stop button to the off position at the platform controls.
4. At the platform controls, press and hold the lift function select and speed select buttons, and pull out the red Emergency Stop button to the on position.

Result: The diagnostic display, at the platform controls and the ECM, will show "SC."

5. Release the lift function select and speed select buttons.

Result: The diagnostic display will show the current configuration.

5. Push in the red Emergency Stop button to the off position at both the ground and platform controls and turn the key switch to the off position.

Machine Option Definitions

**Motion Alarm**: The motion alarm will sound when operating any function.

**Lift/Drive Cut Out**: In addition to an alarm sounding, lift and drive functions are disabled when the platform is raised above the down limit switch and the incline of the chassis exceeds the rating on the serial plate. Configured on all machines.

**Platform Overload**: When the platform overload limit switch is tripped, signaling an overload condition in the platform, all machine functions are disabled. The additional weight must be removed from the platform and the power cycled from off to on before any function can be resumed. Required for CE models.

**Descent Delay**: This option halts descent for 4 to 6 seconds. All controls must be released and re-engaged before descent is re-enabled. Required for CE models.

**Battery Drain Alarm**: When the machine is turned on and in the stowed position, and no function is activated for 2 minutes, an alarm will sound once every 3 seconds. When this option is configured, a dot in the diagnostic display window will remain continuously illuminated when the ECM is in the ‘SC’ mode OR when the platform up function is activated.
How to Change the Software Configuration

1. Pull out the red Emergency Stop button to the on position at the ground controls.
2. Push in the red Emergency Stop button to the off position at the platform controls.
3. Turn the key switch to platform control.
4. At the platform controls, press and hold the lift function select and speed select buttons, and pull out the red Emergency Stop button to the on position.
   ☑ Result: The diagnostic display, at the platform controls and the ECM, will show “SC.”
5. Release the lift function select and speed select buttons.
   ☑ Result: The diagnostic display will show the current configuration.
6. Press the lift function select button.
   ☑ Result: The 'tens' digit setting will be activated and the current 'tens' setting will flash in the diagnostic display. Use the steering thumb rocker switch on the joystick to increase or decrease the value. See 1-4, Machine Configuration Code Chart for configuration settings.
7. Press and hold the lift function select button for a minimum of 3 seconds to set the 'tens' value.
8. Press the speed select button.
   ☑ Result: The 'ones' digit setting will be activated and the current 'ones' setting will flash in the diagnostic display. Use the steering thumb rocker switch on the joystick to increase or decrease the value. See 1-4, Machine Configuration Code Chart for configuration settings.
9. Press and hold the speed select button for a minimum of 3 seconds to set the 'ones' value.
10. Turn the key switch to the off position.

Note: Any change in software settings will not take effect until the key switch is turned to the off position.
### Machine Configuration Code Chart

A mark in the four right columns indicates that the machine configuration, at left, includes this option.

How to Activate the Battery Drain Alarm Option

1. Pull out the red Emergency Stop button to the on position at the ground controls.
2. Push in the red Emergency Stop button to the off position at the platform controls.
3. Turn the key switch to platform control.
4. At the platform controls, press and hold the lift function select and speed select buttons, and pull out the red Emergency Stop button to the on position.

☐ Result: The diagnostic display, at the platform controls and the ECM, will show “SC.”
5. Release the lift function select and speed select buttons.

☐ Result: The diagnostic display will show the current configuration.
6. Press the speed select button.

☐ Result: The 'ones' digit setting will be activated and the current 'ones' setting will flash in the diagnostic display.
7. Press the horn button.

☐ Result: A dot, located at the lower right of the diagnostic display window, will become illuminated. This indicates that the battery drain alarm option has been activated.
8. Turn the key switch to the off position.

Note: Any change in software settings will not take effect until the key switch is turned to the off position.

Note: To deactivate the battery drain alarm option on a machine which has the option activated, repeat this procedure. When the ECM is in the ‘SC’ mode and the option is deactivated, there will not be an illuminated dot in the diagnostic display window.

How to Determine the Battery Voltage

The diagnostic display on the platform controls is used to indicate the battery voltage at all times when the machine is in normal operation.

**Limp Mode:** If the battery level falls to less than 17.8V DC, the single bar in the diagnostic display will be flashing and machine drive speed is limited to that of the raised drive speed. Refer to Section 2, Specifications.

- the battery level is 22.6V DC or higher
- the battery level is 21.6 to 22.5V DC
- the battery level is 20.7 to 21.5V DC
- the battery level is 19.7 to 20.6V DC
- the battery level is 17.8 to 19.6V DC
- the battery level is less than 17.8V DC
How to Remove the Platform

Perform this procedure with the platform extension fully retracted and locked in position.

1. Raise the platform to approximately 3 ft / 1 m.
2. Remove the retaining fasteners securing the platform to the platform mount at the steer end of the machine.
3. Lower the platform to the stowed position.
4. Disconnect the battery packs from the machine.

**WARNING** Electrocuton/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

5. Disconnect the platform controls from the control cable at the platform.
6. Remove the cover from the AC outlet. Tag and disconnect the wiring from the outlet.

**WARNING** Electrocuton/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

7. Disconnect the wiring from the platform and pull the wiring free of the platform.

8. **Models with air line to platform option:** Disconnect the air line from the platform. Pull the air line free of the platform.

9. Support the platform with a forklift at the non-steer end. Do not apply any lifting pressure.

10. Attach a strap from the lanyard anchorage point on the platform railings to the carriage on the forklift to help support the platform.

11. **GS-1530/32 and GS-1930/32:** Lift the steer end of the platform slightly to clear the platform mount and slide the platform towards the non-steer end of the machine until the platform slide blocks at the non-steer end of the machine are visible through the access holes in the bottom of the platform.

**All other models:** Lift the steer end of the platform slightly to clear the platform mount and slide the platform towards the steer end of the machine until the platform slide blocks at the non-steer end of the machine are visible through the access holes in the bottom of the platform.

**WARNING** Crushing hazard. The platform will fall if not properly supported.

12. Carefully lift the platform off of the machine and place it on a structure capable of supporting it.

Note: Note the position of the wear pads before the platform is removed so when the platform is installed they will be in the correct position.
2-2
Platform Extension

How to Remove the Platform Extension

1 Lower the platform to the stowed position.
2 Extend the platform approximately 3 feet / 1 m.
3 Remove the platform controls from the platform and lay them off to the side of the machine.
4 Support the platform extension with a forklift at the steer end of the machine. Do not apply any lifting pressure.
5 Attach a strap from the platform extension railings to the carriage on the forklift to help support the platform extension.
6 Remove the two retaining fasteners from each platform extension roller bracket assembly. Remove each assembly from the machine.

Note: Do not remove the platform roller bolt.

7 Remove the platform roller wheels from the machine.
8 Carefully slide the platform extension out from the platform and place it on a structure capable of supporting it.

How to Replace the Platform Extension Wear Pads

1 Remove the Platform Extension. See 2-2, How to Remove the Platform Extension.
2 Drill out the rivets which hold the wear pads in place.
3 Install the new wear pads using new rivets.

Note: When installing new rivets, make sure the rivet heads are not above the surface of the wear pad.
Scissor Components

1. Number 4 pivot pin
2. Number 3 outer arm
3. Number 3 center pivot pin (2 pins)
4. Lift cylinder rod-end pivot pin
5. Number 3 pivot pin (steer end)
6. Number 2 center pivot pin (2 pins)
7. Number 2 pivot pin (steer end)
8. Number 1 center pivot pin (2 pins)
9. Number 1 pivot pin
10. Number 3 inner arm
11. Number 3 outer arm
12. Number 3 pivot pin (non-steer end)
13. Number 2 inner arm
14. Number 2 outer arm
15. Number 2 pivot pin (non-steer end)
16. Lift cylinder barrel-end pivot pin
17. Number 1 outer arm
**3-1**

**Scissor Assembly, GS-1530 and GS-1532**

**How to Disassemble the Scissor Assembly, GS-1530 and GS-1532**

**WARNING** Bodily injury hazard. The procedures in this section require specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is required.

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

1. Remove the platform. See 2-1, How to Remove the Platform.

2. Remove the cables from the number 3 outer arm (index #11) at the ground controls side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

3. Remove the cables from the number 3 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

4. Attach a lifting strap from an overhead crane to the number 3 outer arm (index #11).

5. Remove the external snap rings and retaining fasteners from the number 3 center pivot pins (index #2).

6. Use a soft metal drift to remove the number 3 center pivot pins (index #2).

7. Remove the retaining fasteners from the number 3 pivot pin (index #12) at the non-steer end of the machine.

8. Use a soft metal drift to remove the number 3 pivot pin (index #12) from the non-steer end of the machine. Remove the number 3 outer arm (index #11) from the machine.

**WARNING** Crushing hazard. The number 3 outer arm may become unbalanced and fall if not properly supported when removed from the machine.
SCISSOR COMPONENTS

9  Remove the number 3 cable bridge mounting fasteners and remove the cable bridge from the machine.

10 Attach a lifting strap from an overhead crane to the lug on the rod end of the lift cylinder for support. Do not apply any lifting pressure.

11 Remove the pin retaining fasteners from the lift cylinder rod-end pivot pin (index #3). Use a soft metal drift to remove the pin.

   **CAUTION**  Bodily injury hazard. The cylinder may fall when the rod-end pivot pin is removed if not properly supported.

12 Lower the cylinder onto the number 1 inner arm (index #8).

   **NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

13 Attach a lifting strap from an overhead crane to the number 3 inner arm (index #10).

14 Remove the retaining fasteners from the number 3 pivot pin (index #4) at the steer end.

15 Use a soft metal drift to remove the number 3 pivot pin (index #4). Remove the number 3 inner arm (index #10) from the machine.

   **WARNING**  Bodily injury hazard. The number 3 inner arm may become unbalanced and fall if not properly supported when removed from the machine.

16 Remove the cables from the number 2 cable bridge and lay them off to the side.

   **NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

17 Remove the external snap rings and retaining fasteners from the number 2 center pivot pin (index #5) at the ground controls side.

18 Remove the number 2 cable bridge mounting fasteners and remove the cable bridge from the machine.

19 Attach a lifting strap from an overhead crane to the number 2 outer arm (index #14) at the ground controls side.

20 Use a soft metal drift to remove the number 2 center pivot pin (index #5) at the ground controls side.

21 Remove the retaining fasteners from the number 2 pivot pin (index #15) at the non-steer end of the machine.

22 Use a soft metal drift to tap the number 2 pivot pin (index #15) halfway out at the non-steer end of the machine. Remove the number 2 outer arm (index #14) from the ground controls side of the machine.

   **CAUTION**  Bodily injury hazard. The number 2 outer arm at the ground controls side may become unbalanced and fall if not properly supported when removed from the machine.

23 Attach a lifting strap from an overhead crane to the number 2 outer arm (index #14) at the battery pack side.

24 Remove the external snap rings and retaining fasteners from the number 2 center pivot pin (index #5) at the battery pack side.

25 Use a soft metal drift to remove the number 2 center pivot pin (index #5) at the battery pack side.

   **CAUTION**  Bodily injury hazard. The number 2 outer arm at the battery pack side may become unbalanced and fall if not properly supported when removed from the machine.
26 Use a soft metal drift to tap the number 2 pivot pin (index #15) in the other direction at the non-steer end. Remove the number 2 outer arm (index #14) from the battery pack side of the machine.

**CAUTION** Bodily injury hazard. The number 2 outer arm at the battery pack side may become unbalanced and fall if not properly supported when removed from the machine.

27 Attach a lifting strap from an overhead crane to the number 2 inner arm (index #13).

28 Remove the retaining fasteners from the number 2 pivot pin (index #6) at the steer end of the machine.

29 Use a soft metal drift to remove the number 2 pivot pin (index #6). Remove the number 2 inner arm (index #13) from the machine.

**CAUTION** Bodily injury hazard. The number 2 inner arm may become unbalanced and fall if not properly supported when removed from the machine.

30 Remove the safety arm from the number 2 inner arm (index #13) that was just removed.

31 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #8).

32 Raise the number 1 inner arm (index #8) approximately 2 feet / 60 cm and install the safety arm between the number 1 inner arm (index #8) and the number 1 outer arm (index #17). Lower the scissor arms onto the safety arm.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the scissor arms onto the safety arm.

33 Attach a lifting strap from an overhead crane to the lug on the rod end of the lift cylinder (index #3). Raise the lift cylinder approximately 3 ft / 1 m.

34 Tag, disconnect and plug the hydraulic hoses on the lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

35 Tag and disconnect the wires and manual lowering cable from the solenoid valve on the cylinder.

36 **Models with platform overload option:** Tag and disconnect the wire harness from the platform overload switch.

37 Raise the lift cylinder to a vertical position.

38 Remove the pin retaining fasteners from the lift cylinder barrel-end pin (index #16). Use a soft metal drift to remove the pin. Remove the lift cylinder from the machine.

**WARNING** Crushing hazard. The lift cylinder could become unbalanced and fall when it is removed from the machine if not properly attached to the overhead crane.

**NOTICE** Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

39 Place a 4 x 4 x 48 inch / 10 cm x 10 cm x 1.2 m long block across both sides of the chassis under the number 1 center pivot pin (index #7).
40 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #8) at the non-steer end. Raise the number 1 inner arm and remove the safety arm. Lower the number 1 inner arm (index #8) onto the block that was placed across the chassis.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the arms onto the block.

41 Remove the cables from the number 1 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

42 Support and secure the entry ladder to an appropriate lifting device.

43 Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

44 Attach a lifting strap from an overhead crane to the number 1 outer arm (index #17). Do not apply any lifting pressure.

45 Remove the external snap rings and retaining fasteners from the number 1 center pivot pins (index #7).

46 Remove the number 1 cable bridge from the machine.

47 Use a soft metal drift to remove the number 1 center pivot pins (index #7).

**CAUTION** Bodily injury hazard. The number 1 outer arm may become unbalanced and fall if not properly supported when the pin is removed.

48 Slide the number 1 outer arm (index #17) to the non-steer end and remove it from the machine.

**CAUTION** Bodily injury hazard. The number 1 outer arm may become unbalanced and fall if not properly supported when removed from the machine.

49 Attach the strap from an overhead crane to the number 1 inner arm (index #8). Do not lift it.

50 Remove the upper fasteners securing the number 1 inner arm pivot bracket to the end of the chassis. Loosen the lower fasteners.

51 Remove the number 1 inner arm (index #8) from the machine.

**CAUTION** Bodily injury hazard. The number 1 inner arm may become unbalanced and fall if not properly supported when removed from the machine.

**NOTICE** Component damage hazard. Be sure not to damage the limit switch or level sensor box components when the number 1 inner arm is removed from the machine.
How to Replace the Scissor Arm Wear Pads

1. Remove the platform. See 2-1, How to Remove the Platform.
2. Support and secure the entry ladder to an appropriate lifting device.
3. Remove the fasteners from the entry ladder and remove the entry ladder from the machine.
   - **CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.
4. Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.
5. Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.
6. Remove the retaining fasteners securing the chassis mount bracket to the chassis at the steer end of the machine.
7. Attach a lifting strap from an overhead crane to the scissor arm assembly.
8. Raise the scissor arm assembly at the steer end with the overhead crane until the chassis mount bracket will clear the level sensor.
   - **DANGER** Crushing hazard. The scissor assembly will fall if not properly supported when removed from the drive chassis.
   - **NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.
9. Remove the scissor assembly from the machine just enough to access both wear pads.
10. Remove both old wear pads.
11. Install two new wear pads.
12. Slide the scissor assembly back into the drive chassis.
13. Lower the scissor assembly into position and install the chassis mount bracket onto the chassis. Securely install and tighten the fasteners. Do not overtighten.
   - **NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.
SCISSOR COMPONENTS

1. Number 5 pivot pin
2. Number 4 center pivot pin (2 pins)
3. Number 4 pivot pin (steer end)
4. Number 3 center pivot pin (2 pins)
5. Lift cylinder rod-end pivot pin
6. Number 3 pivot pin (steer end)
7. Number 2 center pivot pin (2 pins)
8. Number 2 pivot pin (steer end)

3-2
Scissor Assembly, GS-1930 and GS-1932

How to Disassemble the Scissor Assembly, GS-1930 and GS-1932

**WARNING** Bodily injury hazard. The procedures in this section require specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is required.

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

1. Remove the platform. See 2-1, How to Remove the Platform.

2. Remove the cables from the number 4 outer arm (index #13) at the ground controls side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

3. Remove the cables from the number 4 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

4. Attach a lifting strap from an overhead crane to the number 4 outer arm (index #13).

5. Remove the external snap rings and retaining fasteners from the number 4 center pivot pins (index #2).
SCISSOR COMPONENTS

6 Use a soft metal drift to remove the number 4 center pivot pins (index #2).

7 Remove the retaining fasteners from the number 4 pivot pin (index #14) at the non-steer end of the machine.

8 Use a soft metal drift to remove the number 4 pivot pin (index #14) from the non-steer end of the machine. Remove the number 4 outer arm (index #13) from the machine.

 Crushing hazard. The number 4 outer arm may become unbalanced and fall if not properly supported when removed from the machine.

9 Remove the number 4 cable bridge mounting fasteners and remove the cable bridge from the machine.

10 Attach a lifting strap from an overhead crane to the number 4 inner arm (index #12).

11 Remove the retaining fasteners from the number 4 pivot pin (index #3).

12 Use a soft metal drift to remove the number 4 pivot pin (index #3) at the steer end. Remove the number 4 inner arm (index #12) from the machine.

 Crushing hazard. The number 4 inner arm may become unbalanced and fall if not properly supported when removed from the machine.

13 Remove the cables from the number 3 cable bridge and lay them off to the side.

 NOTICE Component damage hazard. Cables can be damaged if they are kinked or pinched.

14 Remove the number 3 cable bridge mounting fasteners and remove the cable bridge from the machine.

15 Attach a lifting strap from an overhead crane to the number 3 outer arm (index #4) at the ground controls side.

16 Remove the external snap rings and retaining fasteners from the number 3 center pivot pins (index #4).

17 Use a soft metal drift to remove the number 3 center pivot pin (index #4) at the ground control side.

18 Remove the retaining fasteners from the number 3 pivot pin (index #17) at the non-steer end of the machine.

19 Use a soft metal drift to tap the number 3 pivot pin (index #17) halfway out at the non-steer end of the machine. Remove the number 3 outer arm (index #16) at the ground controls side from the machine.

 Bodily injury hazard. The number 3 outer arm at the ground controls side may become unbalanced and fall if not properly supported when removed from the machine.
20 Attach a lifting strap from an overhead crane to the number 3 outer arm (index #16) at the battery pack side.

21 Use a soft metal drift to remove the number 3 center pivot pin (index #4) at the battery pack side of the machine.

22 Use a soft metal drift to tap the number 3 pivot pin (index #17) in the other direction. Remove the number 3 outer arm (index #16) from the battery pack side of the machine.

**CAUTION** Bodily injury hazard. The number 3 outer arm at the battery pack side may become unbalanced and fall if not properly supported when removed from the machine.

23 Remove the number 3 pivot pin (index #17) from the non-steer end of the machine.

24 Attach a lifting strap from an overhead crane to the lug on the rod end of the lift cylinder for support. Do not apply any lifting pressure.

25 Remove the pin retaining fasteners from the lift cylinder rod-end pivot pin (index #5). Use a soft metal drift to remove the pin.

**CAUTION** Bodily injury hazard. The cylinder may fall when the rod-end pivot pin is removed if not properly supported.

26 Lower the cylinder onto the number 1 inner arm (index #9).

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

27 Attach a lifting strap from an overhead crane to the number 3 inner arm (index #15).

28 Remove the retaining fasteners from the number 3 pivot pin (index #6) at the steer end.

29 Use a soft metal drift to remove the number 3 pivot pin (index #6). Remove the number 3 inner arm (index #15) from the machine.

**CAUTION** Bodily injury hazard. The number 3 inner arm may become unbalanced and fall if not properly supported when removed from the machine.

30 Remove the cables from the number 2 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

31 Remove the external snap rings and retaining fasteners from the number 2 center pivot pin (index #7) at the ground controls side.

32 Remove the number 2 cable bridge mounting fasteners and remove the cable bridge from the machine.

33 Attach a lifting strap from an overhead crane to the number 2 outer arm (index #19) at the ground controls side.

34 Use a soft metal drift to remove the number 2 center pivot pin (index #7) at the ground controls side.

35 Remove the retaining fasteners from the number 2 pivot pin (index #20) at the non-steer end of the machine.
SCISSOR COMPONENTS

36 Use a soft metal drift to tap the number 2 pivot pin (index #20) halfway out at the non-steer end of the machine. Remove the number 2 outer arm (index #19) from the ground controls side of the machine.

**CAUTION** Bodily injury hazard. The number 2 outer arm at the ground controls side may become unbalanced and fall if not properly supported when removed from the machine.

37 Attach a lifting strap from an overhead crane to the number 2 outer arm (index #19) at the battery pack side.

38 Remove the external snap rings and retaining fasteners from the number 2 center pivot pin (index #7) at the battery pack side.

39 Use a soft metal drift to remove the number 2 center pivot pin (index #7) at the battery pack side.

**CAUTION** Bodily injury hazard. The number 2 outer arm at the battery pack side may become unbalanced and fall if not properly supported when removed from the machine.

40 Use a soft metal drift to tap the number 2 pivot pin at the non-steer end (index #20) in the other direction. Remove the number 2 outer arm (index #19) from the battery pack side of the machine.

**CAUTION** Bodily injury hazard. The number 2 outer arm at the battery pack side may become unbalanced and fall if not properly supported when removed from the machine.

41 Remove the number 3 pivot pin (index #17) from the non-steer end of the machine.

42 Attach a lifting strap from an overhead crane to the number 2 inner arm (index #18).

43 Remove the retaining fasteners from the number 2 pivot pin (index #8) at the steer end of the machine.

44 Use a soft metal drift to remove the number 2 pivot pin (index #8). Remove the number 2 inner arm (index #18) from the machine.

**CAUTION** Bodily injury hazard. The number 2 inner arm may become unbalanced and fall if not properly supported when removed from the machine.

45 Remove the safety arm from the number 2 inner arm (index #18) that was just removed.

46 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #10).

47 Raise the number 1 inner arm (index #10) approximately 2 feet / 60 cm and install the safety arm between the number 1 inner arm (index #10) and the number 1 outer arm (index #22) at the non-steer end of the machine. Lower the scissor arms onto the safety arm.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the scissor arms onto the safety arm.

48 Attach a lifting strap from an overhead crane to the lug on the rod end of the lift cylinder (index #5). Raise the lift cylinder approximately 3 ft / 1 m.
49 Tag, disconnect and plug the hydraulic hoses on the lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

50 Tag and disconnect the wires and manual lowering cable from the solenoid valve on the cylinder.

51 **Models with platform overload option**: Tag and disconnect the wire harness from the platform overload switch.

52 Raise the lift cylinder to a vertical position.

53 Remove the pin retaining fasteners from the lift cylinder barrel-end pin (index #21). Use a soft metal drift to remove the pin. Remove the lift cylinder from the machine.

**WARNING** Crushing hazard. The lift cylinder may become unbalanced and fall when it is removed from the machine if not properly attached to the overhead crane.

**NOTICE** Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

54 Place a 4 x 4 x 48 inch / 10 cm x 10 cm x 1.2 m long block across both sides of the chassis under the number 1 center pivot pin (index #11).

55 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #10) at the non-steer end. Raise the number 1 inner arm and remove the safety arm. Lower the number 1 inner arm (index #10) onto the block that was placed across the chassis.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the arms onto the block.

56 Remove the cables from the number 1 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

57 Support and secure the entry ladder to an appropriate lifting device.

58 Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

59 Attach a lifting strap from an overhead crane to the number 1 outer arm (index #22). Do not apply any lifting pressure.

60 Remove the external snap rings and retaining fasteners from the number 1 center pivot pins (index #11).

61 Remove the number 1 cable bridge from the machine.
62 Use a soft metal drift to remove the number 1 center pivot pins (index #9).

**CAUTION** Bodily injury hazard. The number 1 outer arm may become unbalanced and fall if not properly supported when the pin is removed.

63 Slide the number 1 outer arm (index #22) to the non-steer end and remove it from the machine.

**CAUTION** Bodily injury hazard. The number 1 outer arm may become unbalanced and fall if not properly supported when removed from the machine.

64 Attach the strap from an overhead crane to the number 1 inner arm (index #10). Do not lift it.

65 Remove the upper fasteners securing the number 1 inner arm pivot bracket to the end of the chassis. Loosen the lower fasteners.

66 Remove the number 1 inner arm (index #10) from the machine.

**CAUTION** Bodily injury hazard. The number 1 inner arm may become unbalanced and fall if not properly supported when removed from the machine.

**NOTICE** Component damage hazard. Be sure not to damage the limit switch or level sensor box components when the number 1 inner arm is removed from the machine.

---

**How to Replace the Scissor Arm Wear Pads**

1. Remove the platform. See 2-1, *How to Remove the Platform*.

2. Support and secure the entry ladder to an appropriate lifting device.

3. Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

4. Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.

5. Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.

6. Remove the retaining fasteners securing the chassis mount bracket to the chassis at the steer end of the machine.

7. Attach a lifting strap from an overhead crane to the scissor arm assembly.

8. Raise the scissor arm assembly at the steer end with the overhead crane until the chassis mount bracket will clear the level sensor.
9 Remove the scissor assembly from the machine just enough to access both wear pads.

**NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.

**CAUTION** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.

10 Remove both old wear pads.

11 Install two new wear pads.

12 Slide the scissor assembly back into the drive chassis.

13 Lower the scissor assembly into position and install the chassis mount bracket onto the chassis. Securely install and tighten the fasteners. Do not over tighten.

**NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.
SCISSOR COMPONENTS

1. Number 4 pivot pin
2. Number 3 outer arm
3. Number 3 center pivot pin (2 pins)
4. Lift cylinder rod-end pivot pin
5. Number 3 pivot pin (steer end)
6. Number 2 center pivot pin (2 pins)
7. Number 2 pivot pin (steer end)
8. Number 1 center pivot pin (2 pins)
9. Number 1 pivot pin
10. Number 3 inner arm
11. Number 3 outer arm

How to Disassemble the Scissor Assembly, GS-2032 and GS-2046

WARNING Bodily injury hazard. The procedures in this section require specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is required.

When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

1 Remove the platform. See 2-1, How to Remove the Platform.
2 Support and secure the entry ladder to an appropriate lifting device.
3 Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

CAUTION Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

4 Remove the cables from the number 3 cable bridge and lay them off to the side.

NOTICE Component damage hazard. Cables can be damaged if they are kinked or pinched.

5 Disconnect the number 3 cable bridge from the number 3 outer arm (index #11) and remove the cable bridge from the machine.
6 Remove the retaining fasteners from the number 4 pivot pin (index #1).
7 Use a soft metal drift to remove the number 4 pivot pin (index #1). Remove the platform mount bracket from the machine.
8 Attach a lifting strap from an overhead crane to the number 3 outer arm at the ground control side (index #11).
9 Remove the retaining fasteners from the number 3 center pivot pin (index #2) at the ground control side.
10 Place a rod through the number 3 center pivot pin at the ground control side (index #2) and twist to remove the pin.
11 Remove the retaining fasteners from the number 3 pivot pin (index #12) at the non-steer end.
SCISSOR COMPONENTS

12 Use a soft metal drift to remove the number 3 pivot pin (index #12) from the non-steer end of the machine. Remove the number 3 outer arm at the ground control side (index #11) from the machine.

**CAUTION** Crushing hazard. The number 3 outer arm at the ground control side (index #11) may become unbalanced and fall if not properly supported when removed from the machine.

13 Attach a lifting strap from an overhead crane to the number 3 outer arm at the battery side (index #11).

14 Remove the retaining fasteners from the number 3 center pivot pin (index #2) at the battery side.

15 Place a rod through the number 3 center pivot pin at the battery side (index #2) and twist to remove the pin.

16 Remove the number 3 outer arm (index #11) from the machine.

**CAUTION** Crushing hazard. The number 3 outer arm (index #11) may become unbalanced and fall if not properly supported when removed from the machine.

17 Attach a lifting strap from an overhead crane to the lug of the rod end of the lift cylinder.

18 Remove the retaining fasteners from the lift cylinder rod end pivot pin (index #3).

19 Use a soft metal drift to remove the lift cylinder rod end pivot pin (index #3) from the machine.

**CAUTION** Crushing hazard. The lift cylinder will fall if not properly supported when the pivot pin is removed.

20 Place a 2 x 4 x 10 inch / 10 x 10 x 25 cm block onto the number 1 inner arm cylinder plate (index #8).

21 Lower the cylinder onto the block.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the cylinder onto the block.

22 Attach a lifting strap from an overhead crane to the number 3 inner arm (index #10). Raise the arm to a vertical position.

23 Remove the retaining fasteners from the number 3 pivot pin at the steer end of the machine (index #4).

24 Use a soft metal drift to remove the number 3 pivot pin (index #4) from the steer end of the machine. Remove the number 3 inner arm (index #10) from the machine.

**CAUTION** Crushing hazard. The number 3 inner arm (index #10) may become unbalanced and fall if not properly supported when the pivot pin is removed.

25 Remove the cables from the number 2A and 2B cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

26 Disconnect the number 2A and 2B cable bridges from the scissor linkset and remove both cable bridges from the machine.

27 Attach a lifting strap from an overhead crane to the number 2 outer arm at the ground control side (index #14).

28 Remove the retaining fasteners from the number 2 center pivot pin (index #5) at the ground control side.

29 Place a rod through the number 2 center pivot pin at the ground control side (index #5) and twist to remove the pin.
30 Remove the retaining fasteners from the number 2 pivot pin (index #15) at the non-steer end.

31 Use a soft metal drift to remove the number 2 pivot pin (index #15) from the non-steer end of the machine. Remove the number 2 outer arm at the ground control side (index #14) from the machine.

**CAUTION** Crushing hazard. The number 2 outer arm at the ground control side (index #14) may become unbalanced and fall if not properly supported when the pivot pin is removed.

32 Attach a lifting strap from an overhead crane to the number 2 outer arm at the battery side (index #14).

33 Remove the retaining fasteners from the number 2 center pivot pin (index #5) at the battery side.

34 Place a rod through the number 2 center pivot pin at the battery side (index #5) and twist to remove the pin.

**CAUTION** Crushing hazard. The number 2 outer arm (index #14) may become unbalanced and fall if not properly supported when the pivot pin is removed.

35 Remove the number 2 outer arm (index #14) from the machine.

**CAUTION** Crushing hazard. The number 2 outer arm (index #14) may become unbalanced and fall if not properly supported when removed from the machine.

36 Attach a lifting strap from an overhead crane to the number 2 inner arm (index #13). Raise the arm to a vertical position.

37 Remove the retaining fasteners from the number 2 pivot pin at the steer end of the machine (index #6).

38 Use a soft metal drift to remove the number 2 pivot pin (index #6) from the steer end of the machine. Remove the number 2 inner arm (index #13) from the machine.

**CAUTION** Crushing hazard. The number 2 inner arm (index #13) may become unbalanced and fall if not properly supported when the pivot pin is removed.

39 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #8).

40 Raise the number 1 inner arm (index #8) approximately 2 feet / 60 cm.

41 Place a 4 x 4 x 48 inch / 10 cm x 10 cm x 1.2 m long block across both sides of the chassis under the number 1 center pivot pin (index #7).

42 Lower the scissor arms onto the block that was placed across the chassis.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the scissor arms.

43 Attach a lifting strap from an overhead crane to the lug of the rod end of the lower lift cylinder.

44 Tag, disconnect and plug the hydraulic hose on the lower lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

45 Tag and disconnect the wire harness from the solenoid valve on the cylinder.
46 Tag and disconnect the wires and manual lowering cable from the solenoid valve on the cylinder.

47 **Models with platform overload option:** Tag and disconnect the wire harness from the platform overload switch.

48 Raise the lift cylinder to a vertical position.

49 Remove the pin retaining fasteners from the lift cylinder barrel-end pivot pin (index #16). Use a soft metal drift to remove the pin. Remove the lift cylinder from the machine.

**CAUTION** Crushing hazard. The lift cylinder will fall if not properly supported when the pivot pin is removed.

**NOTICE** Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

50 Remove the cables from the number 1 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

51 Disconnect the number 1 cable bridge from the number 1 outer arm (index #17) and remove the cable bridge from the machine.

52 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #8).

53 Raise the arm slightly and remove the block.

54 Lower the arm to the stowed position.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the scissor arms.

55 Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.

56 Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.

57 Remove the retaining fasteners securing the chassis mount bracket to the chassis.

58 Remove the linkset from the machine

**CAUTION** Bodily injury hazard. The number 1 inner and outer arms (index #8 and #17) may become unbalanced and fall if not properly supported when removed from the machine.

**NOTICE** Component damage hazard. Be sure not to damage the limit switch or level sensor box components when the number 1 inner and outer arms (index #8 and #17) is removed from the machine.
How to Replace the Scissor Arm Wear Pads

1. Remove the platform. See 2-1, How to Remove the Platform.
2. Support and secure the entry ladder to an appropriate lifting device.
3. Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

4. Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.
5. Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.
6. Remove the retaining fasteners securing the chassis mount bracket to the chassis at the steer end of the machine.
7. Attach a lifting strap from an overhead crane to the scissor arm assembly.
8. Raise the scissor arm assembly at the steer end with the overhead crane until the chassis mount bracket will clear the level sensor.

**DANGER** Crushing hazard. The scissor assembly will fall if both wear pads are allowed to slide out of the drive chassis.

**NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.

9. Move the scissor assembly towards the non-steer end of the machine slightly and to one side of the machine until one of the scissor arm wear pads is accessible. Do not allow both wear pads to slide out of the drive chassis.

**NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.

10. Remove the old wear pad.
11. Install the new wear pad.

12. Rotate the scissor assembly towards the other side of the machine until the other scissor arm wear pad is accessible. Do not allow both wear pads to slide out of the drive chassis.

**DANGER** Crushing hazard. The scissor assembly will fall if both wear pads are allowed to slide out of the drive chassis.

**NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.

13. Remove the old wear pad.

15. Slide the scissor assembly back into the drive chassis.

16. Lower the scissor assembly into position and install the chassis mount bracket onto the chassis. Securely install and tighten the fasteners. Do not overtighten.

**NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.
SCISSOR COMPONENTS

Steer end

1 Number 5 pivot pin
2 Number 4 center pivot pin (2 pins)
3 Number 4 pivot pin (steer end)
4 Number 3 center pivot pin (2 pins)
5 Lift cylinder rod end pivot pin

Scissor Assembly, GS-2632 and GS-2646

How to Disassemble the Scissor Assembly, GS-2632 and GS-2646

**WARNING** Bodily injury hazard. The procedures in this section require specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is required.

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, *Hydraulic Hose and Fitting Torque Specifications.*

1. Remove the platform. See 2-1, *How to Remove the Platform.*

2. Support and secure the entry ladder to an appropriate lifting device.

3. Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

4. Remove the cables from the number 4 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

5. Disconnect the number 4 cable bridge from the number 4 outer arm (index #13) and remove the cable bridge from the machine.

6. Remove the retaining fasteners from the number 5 pivot pin (index #1).
7 Use a soft metal drift to remove the number 5 pivot pin (index #1). Remove the platform mount bracket from the machine.

8 Attach a lifting strap from an overhead crane to the number 4 outer arm at the ground control side (index #13).

9 Remove the retaining fasteners from the number 4 center pivot pin (index #2) at the ground control side.

10 Place a rod through the number 4 center pivot pin at the ground control side (index #2) and twist to remove the pin.

11 Remove the retaining fasteners from the number 4 pivot pin (index #15) at the non-steer end.

12 Use a soft metal drift to remove the number 4 pivot pin (index #14) from the non-steer end of the machine. Remove the number 4 outer arm at the ground control side (index #13) from the machine.

**CAUTION** Crushing hazard. The number 4 outer arm at the ground control side (index #13) may become unbalanced and fall if not properly supported when removed from the machine.

13 Attach a lifting strap from an overhead crane to the number 4 outer arm at the battery side (index #13).

14 Remove the retaining fasteners from the number 4 center pivot pin (index #2) at the battery side.

15 Place a rod through the number 4 center pivot pin at the battery side (index #2) and twist to remove the pin.

16 Remove the number 4 outer arm (index #13) from the machine.

**CAUTION** Crushing hazard. The number 4 outer arm (index #13) may become unbalanced and fall if not properly supported when removed from the machine.

17 Attach a lifting strap from an overhead crane to the number 4 inner arm (index #12). Raise the arm to a vertical position.

18 Remove the retaining fasteners from the number 4 pivot pin at the steer end of the machine (index #3).

19 Use a soft metal drift to remove the number 4 pivot pin (index #3) from the steer end of the machine. Remove the number 4 inner arm (index #12) from the machine.

**CAUTION** Crushing hazard. The number 4 inner arm (index #12) may become unbalanced and fall if not properly supported when removed from the machine.

20 Remove the cables from the number 3A and 3B cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

21 Disconnect the number 3A and 3B cable bridges from the scissor linkset and remove both cable bridges from the machine.
22 Attach a lifting strap from an overhead crane to the number 3 outer arm at the ground control side (index #16).

23 Remove the retaining fasteners from the number 3 center pivot pin (index #4) at the ground control side.

24 Place a rod through the number 3 center pivot pin at the ground control side (index #4) and twist to remove the pin.

25 Remove the retaining fasteners from the number 3 pivot pin (index #17) at the non-steer end.

26 Use a soft metal drift to remove the number 3 pivot pin (index #17) from the non-steer end of the machine. Remove the number 3 outer arm at the ground control side (index #16) from the machine.

CAUTION Crushing hazard. The number 3 outer arm at the ground control side (index #16) may become unbalanced and fall if not properly supported when removed from the machine.

27 Attach a lifting strap from an overhead crane to the number 3 outer arm at the battery side (index #16).

28 Remove the retaining fasteners from the number 3 center pivot pin (index #4) at the battery side.

29 Place a rod through the number 3 center pivot pin at the battery side (index #4) and twist to remove the pin.

30 Remove the number 3 outer arm (index #16) from the machine.

CAUTION Crushing hazard. The number 3 outer arm (index #16) may become unbalanced and fall if not properly supported when removed from the machine.

31 Attach a lifting strap from an overhead crane to the lug of the rod end of the lift cylinder.

32 Remove the retaining fasteners from the lift cylinder rod end pivot pin (index #5).

33 Use a soft metal drift to remove the lift cylinder rod end pivot pin (index #5) from the machine.

CAUTION Crushing hazard. The lift cylinder will fall if not properly supported when the pivot pin is removed.

34 Place a 2 x 4 x 10 inch / 10 x 10 x 25 cm block onto the number 1 inner arm cylinder plate (index #10).

35 Lower the cylinder onto the block.

CAUTION Bodily injury hazard. Keep hands clear of moving parts when lowering the cylinder onto the block.

36 Attach a lifting strap from an overhead crane to the number 3 inner arm (index #15). Raise the arm to a vertical position.

37 Remove the retaining fasteners from the number 3 pivot pin at the steer end of the machine (index #6).
38 Use a soft metal drift to remove the number 3 pivot pin (index #6) from the steer end of the machine. Remove the number 3 inner arm (index #15) from the machine.

**CAUTION** Crushing hazard. The number 3 inner arm (index #15) may become unbalanced and fall if not properly supported when the pivot pin is removed.

39 Remove the cables from the number 2A and 2B cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

40 Disconnect the number 2A and 2B cable bridges from the scissor linkset and remove both cable bridges from the machine.

41 Attach a lifting strap from an overhead crane to the number 2 outer arm at the ground control side (index #19).

42 Remove the retaining fasteners from the number 2 center pivot pin (index #7) at the ground control side.

43 Place a rod through the number 2 center pivot pin at the ground control side (index #7) and twist to remove the pin.

44 Remove the retaining fasteners from the number 2 pivot pin (index #20) at the non-steer end.

45 Use a soft metal drift to remove the number 2 pivot pin (index #20) from the non-steer end of the machine. Remove the number 2 outer arm at the ground control side (index #19) from the machine.

**CAUTION** Crushing hazard. The number 2 outer arm at the ground control side (index #19) may become unbalanced and fall if not properly supported when the pivot pin is removed.

46 Attach a lifting strap from an overhead crane to the number 2 outer arm at the battery side (index #19).

47 Remove the retaining fasteners from the number 2 center pivot pin (index #7) at the battery side.

48 Place a rod through the number 2 center pivot pin at the battery side (index #7) and twist to remove the pin.

**CAUTION** Crushing hazard. The number 2 outer arm (index #19) may become unbalanced and fall if not properly supported when the pivot pin is removed.

49 Remove the number 2 outer arm (index #19) from the machine.

**CAUTION** Crushing hazard. The number 2 outer arm (index #19) may become unbalanced and fall if not properly supported when removed from the machine.
50 Attach a lifting strap from an overhead crane to the number 2 inner arm (index #18). Raise the arm to a vertical position.

51 Remove the retaining fasteners from the number 2 pivot pin at the steer end of the machine (index #8).

52 Use a soft metal drift to remove the number 2 pivot pin (index #8) from the steer end of the machine. Remove the number 2 inner arm (index #18) from the machine.

**Crushing hazard.** The number 2 inner arm (index #18) may become unbalanced and fall if not properly supported when the pivot pin is removed.

53 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #10).

54 Raise the number 1 inner arm (index #10) approximately 2 feet / 60 cm.

55 Place a 4 x 4 x 48 inch / 10 cm x 10 cm x 1.2 m long block across both sides of the chassis under the number 1 center pivot pin (index #9). Lower the scissor arms onto the block that was placed across the chassis.

**Bodily injury hazard.** Keep hands clear of moving parts when lowering the scissor arms.

57 Attach a lifting strap from an overhead crane to the lug of the rod end of the lower lift cylinder.

58 Tag, disconnect and plug the hydraulic hose on the lower lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

59 Tag and disconnect the wire harness from the solenoid valve on the cylinder.

60 Tag and disconnect the wires and manual lowering cable from the solenoid valve on the cylinder.

61 **Models with platform overload option:** Tag and disconnect the wire harness from the platform overload switch.

62 Raise the lift cylinder to a vertical position.

63 Remove the pin retaining fasteners from the lift cylinder barrel-end pivot pin (index #21). Use a soft metal drift to remove the pin. Remove the lift cylinder from the machine.

**Crushing hazard.** The lift cylinder will fall if not properly supported when the pivot pin is removed.

**Component damage hazard.** Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.
SCISSOR COMPONENTS

64 Remove the cables from the number 1 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

65 Disconnect the number 1 cable bridge from the number 1 outer arm (index #22) and remove the cable bridge from the machine.

66 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #10).

67 Raise the arm slightly and remove the block.

68 Lower the arm to the stowed position.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the scissor arms.

69 Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.

70 Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.

71 Remove the retaining fasteners securing the chassis mount bracket to the chassis.

72 Remove the linkset from the machine.

**CAUTION** Bodily injury hazard. The number 1 inner and outer arms (index #10 and #22) may become unbalanced and fall if not properly supported when removed from the machine.

**NOTICE** Component damage hazard. Be sure not to damage the limit switch or level sensor box components when the number 1 inner and outer arms (index #10 and 22) is removed from the machine.

---

**How to Replace the Scissor Arm Wear Pads**

1 Remove the platform. See 2-1, *How to Remove the Platform*.

2 Support and secure the entry ladder to an appropriate lifting device.

3 Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

4 Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.

5 Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.

6 Remove the retaining fasteners securing the chassis mount bracket to the chassis at the steer end of the machine.

7 Attach a lifting strap from an overhead crane to the scissor arm assembly.

8 Raise the scissor arm assembly at the steer end with the overhead crane until the chassis mount bracket will clear the level sensor.

9 Move the scissor assembly towards the non-steer end of the machine slightly and to one side of the machine until one of the scissor arm wear pads is accessible. Do not allow both wear pads to slide out of the drive chassis.

**NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.
10 Remove the old wear pad.

11 Install the new wear pad.

12 Rotate the scissor assembly towards the other side of the machine until the other scissor arm wear pad is accessible. Do not allow both wear pads to slide out of the drive chassis.

⚠️ **DANGER** Crushing hazard. The scissor assembly will fall if both wear pads are allowed to slide out of the drive chassis.

⚠️ **NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.

13 Remove the old wear pad.

14 Install the new wear pad.

15 Slide the scissor assembly back into the drive chassis.

16 Lower the scissor assembly into position and install the chassis mount bracket onto the chassis. Securely install and tighten the fasteners. Do not overtighten.

⚠️ **NOTICE** Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.
SCISSOR COMPONENTS

1. Number 6 pivot pin
2. Number 5 center pivot pin (2 pins)
3. Upper lift cylinder rod-end pivot pin
4. Number 5 pivot pin (steer end)
5. Number 4 center pivot pin (2 pins)
6. Number 4 pivot pin (steer end)
7. Number 3 outer arm
8. Number 3 center pivot pin (2 pins)
9. Lower lift cylinder rod-end pivot pin
10. Number 3 pivot pin (steer end)
11. Number 2 center pivot pin (2 pins)
12. Number 2 pivot pin (steer end)
13. Number 1 center pivot pin (2 pins)
14. Number 1 inner arm
15. Number 1 pivot pin (steer end) (2 pins)
16. Number 5 inner arm
17. Number 5 outer arm
18. Number 5 pivot pin (non-steer end)
19. Number 4 inner arm
20. Number 4 outer arm
21. Number 4 pivot pin (non-steer end)
22. Upper lift cylinder barrel-end pivot pin
23. Number 3 inner arm
24. Number 3 pivot pin (non-steer end)
25. Number 2 inner arm
26. Number 2 outer arm
27. Number 2 pivot pin (non-steer end)
28. Lower lift cylinder barrel-end pivot pin
29. Number 1 outer arm
3-5
Scissor Assembly, GS-3246

How to Disassemble the Scissor Assembly, GS-3246

**WARNING** Bodily injury hazard. The procedures in this section require specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is required.

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section 2, *Hydraulic Hose and Fitting Torque Specifications*.

1. Remove the platform. See 2-1, *How to Remove the Platform*.

2. Support and secure the entry ladder to an appropriate lifting device.

3. Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

4. Remove the cables from the number 5 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

5. Disconnect the number 5 cable bridge from the number 5 outer arm (index #17) and remove the cable bridge from the machine.

6. Remove the retaining fasteners from the number 6 pivot pin (index #1).

7. Use a soft metal drift to remove the number 6 pivot pin (index #1). Remove the platform mount bracket from the machine.

8. Attach a lifting strap from an overhead crane to the number 5 outer arm at the ground control side (index #17).
SCISSOR COMPONENTS

9 Remove the retaining fasteners from the number 5 center pivot pin (index #2) at the ground control side.

10 Place a rod through the number 5 center pivot pin at the ground control side (index #2) and twist to remove the pin.

11 Remove the retaining fasteners from the number 5 pivot pin (index #18) at the non-steer end.

12 Use a soft metal drift to remove the number 5 pivot pin (index #18) from the non-steer end of the machine. Remove the number 5 outer arm at the ground control side (index #17) from the machine.

**CAUTION** Crushing hazard. The number 5 outer arm at the ground control side (index #17) may become unbalanced and fall if not properly supported when removed from the machine.

13 Attach a lifting strap from an overhead crane to the number 5 outer arm at the battery side (index #17).

14 Remove the retaining fasteners from the number 5 center pivot pin (index #2) at the battery side.

15 Place a rod through the number 5 center pivot pin at the battery side (index #2) and twist to remove the pin.

16 Remove the number 5 outer arm (index #17) from the machine.

**CAUTION** Crushing hazard. The number 5 outer arm (index #17) may become unbalanced and fall if not properly supported when removed from the machine.

17 Attach a lifting strap from an overhead crane to the number 5 inner arm (index #16). Raise the arm to a vertical position.

18 Remove the retaining fasteners from the number 5 pivot pin at the steer end of the machine (index #4).

19 Use a soft metal drift to remove the number 5 pivot pin (index #18) from the steer end of the machine. Remove the number 5 inner arm (index #16) from the machine.

**CAUTION** Crushing hazard. The number 5 inner arm (index #16) may become unbalanced and fall if not properly supported when removed from the machine.

20 Tag, disconnect and plug the hydraulic hose on the upper lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

21 Tag and disconnect the wire harness from the solenoid valve on the cylinder.

22 Remove the cables from the number 4A and 4B cable bridges and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

23 Disconnect the number 4A and 4B cable bridges from the scissor linkset and remove both cable bridges from the machine.

24 Attach a lifting strap from an overhead crane to the lug of the rod end of the upper lift cylinder.

25 Remove the retaining fasteners from the upper lift cylinder rod end pivot pin (index #3).
26 Use a soft metal drift to remove the upper lift cylinder rod end pivot pin (index #3) from the machine.

**CAUTION** Crushing hazard. The lift cylinder may become unbalanced and fall if not properly supported when the pivot pin is removed.

27 Lower the cylinder onto the linkset.

28 Attach a lifting strap from an overhead crane to the number 4 outer arm at the ground control side (index #20).

29 Remove the retaining fasteners from the number 4 center pivot pin (index #5) at the ground control side.

30 Place a rod through the number 4 center pivot pin at the ground control side (index #5) and twist to remove the pin.

31 Remove the retaining fasteners from the number 4 pivot pin (index #21) at the non-steer end.

32 Use a soft metal drift to remove the number 4 pivot pin (index #21) from the non-steer end of the machine. Remove the number 4 outer arm at the ground control side (index #20) from the machine.

**CAUTION** Crushing hazard. The number 4 outer arm at the ground control side (index #20) may become unbalanced and fall if not properly supported when removed from the machine.

33 Attach a lifting strap from an overhead crane to the number 4 outer arm at the battery side (index #20).

34 Remove the retaining fasteners from the number 4 center pivot pin (index #5) at the battery side.

35 Place a rod through the number 4 center pivot pin at the battery side (index #5) and twist to remove the pin.

36 Remove the number 4 outer arm (index #20) from the machine.

**CAUTION** Crushing hazard. The number 4 outer arm (index #20) may become unbalanced and fall if not properly supported when removed from the machine.

37 Attach a lifting strap from an overhead crane to the number 4 inner arm (index #19). Raise the arm to a vertical position.

38 Remove the retaining fasteners from the number 4 pivot pin at the steer end of the machine (index #6).

39 Use a soft metal drift to remove the number 4 pivot pin (index #6) from the steer end of the machine. Remove the number 4 inner arm (index #19) from the machine.

**CAUTION** Crushing hazard. The number 4 inner arm (index #19) may become unbalanced and fall if not properly supported when removed from the machine.

40 Remove the cables from the number 3A and 3B cable bridges and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

41 Disconnect the number 3A and 3B cable bridges from the scissor linkset and remove both cable bridges from the machine.

42 Attach a lifting strap from an overhead crane to the number 3 outer arm at the ground control side (index #7).

43 Remove the retaining fasteners from the number 3 center pivot pin (index #8) at the ground control side.

44 Place a rod through the number 3 center pivot pin at the ground control side (index #8) and twist to remove the pin.

45 Remove the retaining fasteners from the number 3 pivot pin (index #24) at the non-steer end.
SCISSOR COMPONENTS

46 Use a soft metal drift to remove the number 3 pivot pin (index #24) from the non-steer end of the machine. Remove the number 3 outer arm at the ground control side (index #7) from the machine.

⚠️ CAUTION ⚠️ Crushing hazard. The number 3 outer arm at the ground control side (index #7) may become unbalanced and fall if not properly supported when removed from the machine.

47 Attach a lifting strap from an overhead crane to the number 3 outer arm at the battery side (index #7).

48 Remove the retaining fasteners from the number 3 center pivot pin (index #8) at the battery side.

49 Place a rod through the number 3 center pivot pin at the battery side (index #8) and twist to remove the pin.

50 Remove the number 3 outer arm (index #7) from the machine.

⚠️ CAUTION ⚠️ Crushing hazard. The number 3 outer arm (index #7) may become unbalanced and fall if not properly supported when removed from the machine.

51 Attach a lifting strap from an overhead crane to the lug of the rod end of the upper lift cylinder.

52 Raise the lift cylinder to a vertical position.

53 Remove the pin retaining fasteners from the lift cylinder barrel-end pivot pin (index #22). Remove the lift cylinder from the machine.

⚠️ CAUTION ⚠️ Crushing hazard. The lift cylinder will fall if not properly supported when the pivot pin is removed.

⚠️ CAUTION ⚠️ Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

54 Attach a lifting strap from an overhead crane to the lug of the rod end of the lower lift cylinder.

55 Remove the retaining fasteners from the lower lift cylinder rod end pivot pin (index #9).

56 Use a soft metal drift to remove the lower lift cylinder rod end pivot pin (index #9) from the machine.

⚠️ CAUTION ⚠️ Crushing hazard. The lower lift cylinder will fall if not properly supported when the pivot pin is removed.

57 Place a 2 x 4 x 10 inch / 10 x 10 x 25 cm block onto the number 1 inner arm cylinder plate (index #14).

58 Lower the cylinder onto the block.

⚠️ CAUTION ⚠️ Bodily injury hazard. Keep hands clear of moving parts when lowering the cylinder.

59 Attach a lifting strap from an overhead crane to the number 3 inner arm (index #23). Raise the arm to a vertical position.

60 Remove the retaining fasteners from the number 3 pivot pin at the steer end of the machine (index #10).

61 Use a soft metal drift to remove the number 3 pivot pin (index #10) from the steer end of the machine. Remove the number 3 inner arm (index #23) from the machine.

⚠️ CAUTION ⚠️ Crushing hazard. The number 3 inner arm (index #23) may become unbalanced and fall if not properly supported when the pivot pin is removed.

62 Remove the cables from the number 2A and 2B cable bridges and lay them off to the side.

⚠️ CAUTION ⚠️ Component damage hazard. Cables can be damaged if they are kinked or pinched.
63 Disconnect the number 2A and 2B cable bridges from the scissor linkset and remove both cable bridges from the machine.

64 Attach a lifting strap from an overhead crane to the number 2 outer arm at the ground control side (index #26).

65 Remove the retaining fasteners from the number 2 center pivot pin (index #11) at the ground control side.

66 Place a rod through the number 2 center pivot pin at the ground control side (index #11) and twist to remove the pin.

67 Remove the retaining fasteners from the number 2 pivot pin (index #27) at the non-steer end.

68 Use a soft metal drift to remove the number 2 pivot pin (index #27) from the non-steer end of the machine. Remove the number 2 outer arm at the ground control side (index #26) from the machine.

69 Attach a lifting strap from an overhead crane to the number 2 outer arm at the battery side (index #26).

70 Remove the retaining fasteners from the number 2 center pivot pin (index #11) at the battery side.

71 Place a rod through the number 2 center pivot pin at the battery side (index #11) and twist to remove the pin.

72 Remove the number 2 outer arm (index #26) from the machine.

73 Attach a lifting strap from an overhead crane to the number 2 inner arm (index #25). Raise the arm to a vertical position.

74 Remove the retaining fasteners from the number 2 pivot pin at the steer end of the machine (index #12).

75 Use a soft metal drift to remove the number 2 pivot pin (index #12) from the steer end of the machine. Remove the number 2 inner arm (index #25) from the machine.

76 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #14).

77 Raise the number 1 inner arm (index #14) approximately 2 feet / 60 cm.

78 Place a 4 x 4 x 48 inch / 10 cm x 10 cm x 1.2 m long block across both sides of the chassis under the number 1 center pivot pin (index #13).

79 Lower the scissor arms onto the block that was placed across the chassis.

80 Attach a lifting strap from an overhead crane to the lug of the rod end of the lower lift cylinder.

---

**CAUTION** Crushing hazard. The number 2 outer arm at the ground control side (index #26) may become unbalanced and fall if not properly supported when the pivot pin is removed.

**CAUTION** Crushing hazard. The number 2 outer arm (index #26) may become unbalanced and fall if not properly supported when removed from the machine.

**CAUTION** Crushing hazard. The number 2 outer arm (index #26) may become unbalanced and fall if not properly supported when removed from the machine.

**CAUTION** Crushing hazard. The number 2 inner arm (index #25) may become unbalanced and fall if not properly supported when the pivot pin is removed.

**CAUTION** Crushing hazard. The number 2 inner arm (index #25) may become unbalanced and fall if not properly supported when removed from the machine.

**CAUTION** Crushing hazard. The number 2 inner arm (index #25) may become unbalanced and fall if not properly supported when the pivot pin is removed.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the scissor arms.
SCISSOR COMPONENTS

81 Tag, disconnect and plug the hydraulic hose on the lower lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

82 Tag and disconnect the wire harness from the solenoid valve on the cylinder.

83 Tag and disconnect the wires and manual lowering cable from the solenoid valve on the cylinder.

84 **Models with platform overload option:** Tag and disconnect the wire harness from the platform overload switch.

85 Raise the lift cylinder to a vertical position.

86 Remove the pin retaining fasteners from the lift cylinder barrel-end pivot pin (index #28). Use a soft metal drift to remove the pin. Remove the lift cylinder from the machine.

**CAUTION** Crushing hazard. The lift cylinder will fall if not properly supported when the pivot pin is removed.

**NOTICE** Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

87 Remove the cables from the number 1 cable bridge and lay them off to the side.

**NOTICE** Component damage hazard. Cables can be damaged if they are kinked or pinched.

88 Disconnect the number 1 cable bridge from the number 1 outer arm (index #29) and remove the cable bridge from the machine.

89 Attach a lifting strap from an overhead crane to the number 1 inner arm (index #14).

90 Raise the arm slightly and remove the block.

91 Lower the arm to the stowed position.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the scissor arms.

92 Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.

93 Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.

94 Remove the retaining fasteners securing the chassis mount bracket to the chassis.

95 Remove the linkset from the machine

**CAUTION** Bodily injury hazard. The number 1 inner and outer arms (index #14 and #29) may become unbalanced and fall if not properly supported when removed from the machine.

**NOTICE** Component damage hazard. Be sure not to damage the limit switch or level sensor box components when the number 1 inner and outer arms (index #14 and 29) is removed from the machine.
How to Replace the Scissor Arm Wear Pads

1. Remove the platform. See 2-1, How to Remove the Platform.

2. Support and secure the entry ladder to an appropriate lifting device.

3. Remove the fasteners from the entry ladder and remove the entry ladder from the machine.

   CAUTION Crush hazard. The entry ladder may become unbalanced and fall if not properly supported and secured to the lifting device.

4. Secure the ends of the scissor arms together at the steer end of the machine with a strap or other suitable device.

5. Secure the ends of the scissor arms together at the non-steer end of the machine with a strap or other suitable device.

6. Remove the retaining fasteners securing the chassis mount bracket to the chassis at the steer end of the machine.

7. Attach a lifting strap from an overhead crane to the scissor arm assembly.

8. Raise the scissor arm assembly at the steer end with the overhead crane until the chassis mount bracket will clear the level sensor.

9. Move the scissor assembly towards the non-steer end of the machine slightly and to one side of the machine until one of the scissor arm wear pads is accessible. Do not allow both wear pads to slide out of the drive chassis.

   NOTICE Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.

10. Remove the old wear pad.

11. Install the new wear pad.

12. Rotate the scissor assembly towards the other side of the machine until the other scissor arm wear pad is accessible. Do not allow both wear pads to slide out of the drive chassis.

   DANGER Crushing hazard. The scissor assembly will fall if both wear pads are allowed to slide out of the drive chassis.

13. Remove the old wear pad.

15. Slide the scissor assembly back into the drive chassis.

16. Lower the scissor assembly into position and install the chassis mount bracket onto the chassis. Securely install and tighten the fasteners. Do not over tighten.

   NOTICE Component damage hazard. Be careful not to damage the level sensor or limit switch while moving the scissor assembly.
**3-6 Lift Cylinder**

**How to Remove the Lift Cylinder - GS-1530, GS-1532, GS-1930 and GS-1932**

**WARNING** Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

1. Raise the platform 7 to 8 feet / 2.1 to 2.4 m.
2. Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.
3. Lower the platform onto the safety arm.
4. Tag and disconnect the wiring from the solenoid valve coil at the barrel end of the lift cylinder.
5. **Models with platform overload option**: Tag and disconnect the wiring from the platform overload switch.
6. Loosen the adjustment nuts on the solenoid valve and disconnect the manual lowering cable from the valve.

**Note:** During assembly, the manual platform lowering cable needs to be properly adjusted. See 4-1, How to Adjust the Manual Platform Lowering Cable.

7. Remove the fasteners securing the manual lowering cable mount bracket to the cylinder. Remove the bracket from the cylinder.
8. Tag, disconnect and plug the hydraulic hoses on the lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.
9 Attach a lifting strap from an overhead crane to the rod end of the lift cylinder for support.

10 Remove the retaining fasteners from the lift cylinder rod-end pivot pin. Use a soft metal drift to remove the pin.

WARNING Crushing hazard. The lift cylinder will fall if not properly supported.

11 Lower the cylinder onto the number 2 inner arm.

12 Attach a lifting strap from an overhead crane or similar lifting device to the barrel end of the lift cylinder for support.

13 Remove the retaining fasteners from the lift cylinder barrel-end pivot pin. Use a soft metal drift to remove the pin.

WARNING Crushing hazard. The lift cylinder will fall if not properly supported when the pin is removed.

14 Support and secure the lift cylinder to an appropriate lifting device.

15 Remove the lift cylinder through the scissor arms at the steer end of the machine.

CAUTION Crushing hazard. The lift cylinder may become unbalanced and fall if not properly supported and secured to the lifting device.

NOTICE Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

<td>5 ft-lbs</td>
</tr>
</tbody>
</table>

**GS-2032, GS-2632, GS-2046 and GS-2646:**

1 Raise the platform 7 to 8 feet / 2.1 to 2.4 m.

2 Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.

3 Lower the platform onto the safety arm.

WARNING Crushing hazard. Keep hands clear of the safety arm when lowering the platform.

4 Tag and disconnect the wiring from the solenoid valve coil at the barrel end of the lift cylinder.

5 **Models with platform overload option:** Tag and disconnect the wiring from the platform overload switch.
6 Loosen the adjustment nuts on the solenoid valve and disconnect the manual lowering cable from the valve.

Note: During assembly, the manual platform lowering cable needs to be properly adjusted. See 4-1, How to Adjust the Manual Platform Lowering Cable.

7 Remove the fasteners securing the manual lowering cable mount bracket to the cylinder. Remove the bracket from the cylinder.

8 Tag, disconnect and plug the hydraulic hoses on the lift cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

9 Attach a lifting strap from an overhead crane to the rod end of the lift cylinder for support.

10 Remove the retaining fasteners from the lift cylinder rod-end pivot pin. Use a soft metal drift to remove the pin.

**WARNING** Crushing hazard. The lift cylinder will fall if not properly supported.

11 Lower the cylinder onto the number 1 inner arm cylinder plate.

**CAUTION** Bodily injury hazard. Keep hands clear of moving parts when lowering the cylinder.

12 Attach a lifting strap from an overhead crane or similar lifting device to the barrel end of the lift cylinder for support.

13 Remove the retaining fasteners from the lift cylinder barrel-end pivot pin. Use a soft metal drift to remove the pin.

**WARNING** Crushing hazard. The lift cylinder will fall if not properly supported when the pin is removed.

14 Support and secure the lift cylinder to an appropriate lifting device.

15 Remove the lift cylinder through the scissor arms at the steer end of the machine.

**CAUTION** Crushing hazard. The lift cylinder may become unbalanced and fall if not properly supported and secured to the lifting device.

**NOTICE** Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

**Torque specification**

## GS-3246:

1. Raise the platform 7 to 8 feet / 2.1 to 2.4 m.
2. Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.
3. Lower the platform onto the safety arm.
4. Tag and disconnect the wiring from the solenoid valve coil at the barrel end of the lift cylinder.

**Skip to step 9 if removing the upper cylinder.**

### Models with platform overload option:
Tag and disconnect the wiring from the platform overload switch.

6. Loosen the adjustment nuts on the solenoid valve and disconnect the manual lowering cable from the valve.

**Note:** During assembly, the manual platform lowering cable needs to be properly adjusted. See 4-1, *How to Adjust the Manual Platform Lowering Cable*.

7. Remove the fasteners securing the manual lowering cable mount bracket to the cylinder. Remove the bracket from the cylinder.

8. Tag, disconnect and plug the hydraulic hoses on the lift cylinder. Cap the fittings on the cylinder.

### Lower Lift Cylinder

- a. lift cylinder
- b. orifice fitting (schematic item O)
- c. connector fitting
- d. hydraulic hose
- e. manual lowering cable
- f. solenoid valve (schematic item N)
- g. cable mount bracket

**Note:** At the lower lift cylinder, install the orifice fitting with the small opening of the orifice fitting closest to the supply hose.
14 Support and secure the lift cylinder to an appropriate lifting device.

15 Remove the lift cylinder through the scissor arms at the steer end of the machine.

**CAUTION** Crushing hazard. The lift cylinder may become unbalanced and fall if not properly supported and secured to the lifting device.

**NOTICE** Component damage hazard. Be careful not to damage the valve or fittings on the cylinder while removing it from the machine.

**Torque specification**

Note: At the upper lift cylinder, install the orifice fitting with the large opening of the orifice fitting closest to the manifold plug.

12 Attach a lifting strap from an overhead crane or similar lifting device to the barrel end of the lift cylinder for support.

13 Remove the retaining fasteners from the lift cylinder barrel-end pivot pin. Use a soft metal drift to remove the pin.

**WARNING** Crushing hazard. The lift cylinder will fall if not properly supported when the pin is removed.
Ground Controls

4-1 Manual Platform Lowering Cable

The manual platform lowering cable lowers the platform in the event of a main power failure. The manual platform lowering cable is attached to the barrel end of the lift cylinder and is activated next to the ground controls.

How to Adjust the Manual Platform Lowering Cable

1. Raise the platform 7 to 8 feet / 2.1 to 2.4 m.
2. Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.
3. Lower the platform onto the safety arm.
4. Pull the handle of the manual platform lowering cable out until considerable resistance is felt. Release the handle.
5. Measure the distance between the base of the handle and cable mounting nut.

Result: The measurement should be no greater than 1/8 inch / 3 mm.

Skip to step 8 if the measurement is correct.

6. To adjust, loosen the upper lock nut on the cable mounting bracket at the cylinder. Turn the lower lock nut clockwise to decrease the distance or counterclockwise to increase the distance. Tighten the upper lock nut.

Platform manual lowering cable specification

| Gap, lowering handle to mounting nut | 0 to 1/8 inch | 0 to 3 mm |

7. Repeat this procedure beginning with step 4.
8. Raise the platform and rotate the safety arm to the stowed position.
9. Pull the manual lowering handle at the ground controls 2 to 3 times to ensure it is functioning correctly.
Control Relays

Relays used for single function switching are single pole double throw (SPDT) relays.

**How to Test a Single Pole Double Throw Relay**

**WARNING**
Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

1. Label and then disconnect all the wiring from the relay to be tested.
2. Connect the leads from an ohmmeter or continuity tester to each terminal combination and check for continuity. Terminals 85 and 86 represent the coil and should not be tested in any other combination.

<table>
<thead>
<tr>
<th>Test</th>
<th>Desired result</th>

</tr>
</tbody>
</table>

[Relay schematic - deactivated]

[Relay schematic - activated]

Terminal Number Legend
- terminal no. 87a - N.C.
- terminal no. 85 - ground
- terminal no. 30 - common
- terminal no. 86 - coil
- terminal no. 87 - N.O.
4-3
Level Sensor

The Electronic Control Module (ECM) is programmed to deactivate the lift and drive functions and activate an alarm when a signal is received from the level sensor.

The tilt alarm sounds when the incline of the chassis exceeds 2° to the side and 3° to the front or rear.

How to Install and Calibrate the 1.5° Level Sensor

**DANGER** Tip-over hazard. Failure to install or calibrate the level sensor as instructed will compromise machine stability and cause the machine to tip over, resulting in death or serious injury. Do not install or calibrate the level sensor other than specified in this procedure.

1. Move the machine to an area that has a firm, level surface and is free of obstructions.
2. Remove the platform controls from the platform.
3. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
4. Raise the platform 7 to 8 feet / 2.1 to 2.4 m.
5. Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.
6. Lower the platform onto the safety arm.

**WARNING** Crushing hazard. Keep hands clear of the safety arm when lowering the platform.

**If you are not installing a new level sensor, proceed to step 15.**

7. Turn the key switch to the off position and push in the red Emergency Stop button to the off position at the ground controls.
8. Tag and disconnect the level sensor wire harness from the chassis wire harness.

Note: The wire harness connection is located next to the level sensor, on top of the chassis at the steer end of the machine.

9. Remove the level sensor retaining fasteners. Remove the level sensor from the machine.
10. Tag and disconnect the level sensor wires from the level sensor connector plug.
11. Securely install the wires of the new level sensor into the level sensor connector plug.
12 Place the new level sensor onto the level sensor mount bracket with the "X" on the level sensor base closest to the long side of the level sensor mount and the "Y" on the level sensor base closest to the short side of the level sensor mount.

**DANGER** Tip-over hazard. The level sensor must be installed with the "X" on the level sensor base closest to the long side of the tilt level sensor box and the "Y" on the level sensor base closest to the short side of the tilt level sensor box. Failure to install the tilt level sensor as instructed could result in the machine tipping over, causing death or serious injury.

13 Install the level sensor retaining fasteners through the level sensor and springs, and into the mount bracket. Tighten the fasteners and measure the distance between the level sensor and the level sensor mount bracket.

- **Result:** The measurement should be approximately 3/8 inch / 10 mm.

14 Connect the chassis wire harness to the level sensor wire harness.

15 Turn the key switch to the ground control and pull out the red Emergency Stop button to the on position at the ground controls.

16 Adjust the level sensor retaining fasteners until the bubble in the top of the level sensor is centered in the circles.

- **Result:** The tilt sensor alarm should not sound.

17 Raise the platform slightly.

18 Return the safety arm to the stowed position.

19 Lower the platform to the stowed position.

20 Center a lifting jack under the drive chassis at the ground controls side of the machine.

21 Raise the machine approximately 2 inches / 5 cm.
22 **GS-1530 and GS-1930**: Place a 0.64 x 6 x 6 inch / 16.2 mm x 15 cm x 15 cm thick steel block under both wheels at the ground controls side of the machine.

**GS-1532 and GS-1932**: Place a 0.68 x 6 x 6 inch / 17.2 mm x 15 cm x 15 cm thick steel block under both wheels at the ground controls side of the machine.

**GS-2032 and GS-2632**: Place a 0.66 x 6 x 6 inch / 16.8 mm x 15 cm x 15 cm thick steel block under both wheels at the ground controls side of the machine.

**GS-2046, GS-2646 and GS-3246**: Place a 1 x 6 x 6 inch / 25.4 mm x 15 cm x 15 cm thick steel block under both wheels at the ground controls side of the machine.

23 Lower the machine onto the blocks.

24 Raise the platform 7 to 8 feet / 2.1 to 2.4 m.

○ Result: The level sensor alarm should not sound.

☒ Result: The level sensor alarm does sound. Adjust the level sensor retaining fasteners just until the level sensor alarm does not sound.

25 Lower the platform to the stowed position.

26 Raise the machine approximately 2 inches / 5 cm.

27 Remove the blocks from under both wheels.

28 Lower the machine and remove the jack.

29 Center a lifting jack under the drive chassis at the battery pack side of the machine.

30 Raise the machine approximately 2 inches / 5 cm.

31 **GS-1530 and GS-1930**: Place a 0.77 x 6 x 6 inch / 19.6 mm x 15 cm x 15 cm thick steel block under both wheels at the battery pack side of the machine.

**GS-1532 and GS-1932**: Place a 0.83 x 6 x 6 inch / 21.1 mm x 15 cm x 15 cm thick steel block under both wheels at the battery pack side of the machine.

**GS-2032 and GS-2632**: Place a 0.8 x 6 x 6 inch / 20.3 mm x 15 cm x 15 cm thick steel block under both wheels at the battery pack side of the machine.

**GS-2046, GS-2646 and GS-3246**: Place a 1.22 x 6 x 6 inch / 31 mm x 15 cm x 15 cm thick steel block under both wheels at the battery pack side of the machine.

32 Lower the machine onto the blocks.

33 Raise the platform 7 to 8 feet / 2.1 to 2.4 m.

○ Result: The platform should stop and an alarm should sound.

☒ Result: The platform does not stop or the level sensor alarm does not sound. Adjust the level sensor until the alarm just begins to sound OR the down limit switch may need to be adjusted.

34 Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.

35 Lower the scissor arms onto the safety arm.

⚠️ **WARNING** Crushing hazard. Keep hands clear of the safety arm when lowering the platform.

36 Raise the platform 7 to 8 feet / 2.1 to 2.4 m.

37 Return the safety arm to the stowed position.

38 Lower the platform to the stowed position.

39 Raise the machine approximately 2 inches / 5 cm.

41 Remove the blocks from under both wheels.

41 Lower the machine and remove the jack.
Hydraulic Pump

5-1 Function Pump

The hydraulic pump is attached to the motor which makes up the hydraulic power unit.

How to Test the Hydraulic Pump

When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

1 Tag, disconnect and plug the high pressure hydraulic hose from the hydraulic pump.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

2 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to the high pressure port on the pump.

3 Turn the key switch to ground control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

4 Activate the platform up function from the ground controls.

- Result: If the pressure gauge reads 3200 psi / 221 bar, immediately stop. The pump is good.
- Result: If pressure fails to reach 3200 psi / 221 bar, the pump is bad and will need to be serviced or replaced.

**NOTICE** Component damage hazard. There is no relief valve in the hydraulic pump and the pump can be damaged if the pressure is allowed to exceed 3200 psi / 221 bar. When testing the pump, activate the pump in one second intervals until 3200 psi / 221 bar is confirmed. Do not over-pressurize the pump.

5 Remove the pressure gauge and reconnect the hydraulic hose. Torque to specification.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.
How to Remove the Hydraulic Pump

Note: When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section Two, Hydraulic Hose and Fitting Torque Specifications.

1. Disconnect the battery pack from the machine.

   **WARNING**
   - Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2. Tag and disconnect the hydraulic power unit cables at the motor controller.

3. Disconnect the filter head from the filter head mounting bracket. Rotate the filter out and away from the hydraulic power unit.

4. Remove the hydraulic power unit retaining fasteners.

5. Tag, disconnect and plug the hydraulic hard line from the pump. Cap the fitting on the pump.

6. Tag, disconnect and plug the high pressure hose at the pump. Cap the fitting on the pump.

   **WARNING**
   - Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

7. Remove the hydraulic power unit from the machine.

8. Remove the pump mounting bolts. Carefully remove the pump.

   **DANGER**
   - Tip-over hazard. After replacing the hydraulic pump, it is critical to return the function speed settings to original factory specifications. Failure to restore the machine to original factory specifications could cause the machine to tip over resulting in death or serious injury.
Manifolds

6-1
Function Manifold Components - GS-1530, GS-1532, GS-1930 and GS-1932

The function manifold is mounted under the machine, between the module trays.

How to Install a Valve Cartridge

1. Dip the cartridge in clean oil to lube the O-rings.
2. Screw the cartridge in by hand until the top O-ring is met, then torque to specification.
3. If required, install the valve coil(s) onto the valve stem. Install the coil nut onto the valve stem and torque to specification.

How to Install a Valve Cartridge

1. Dip the cartridge in clean oil to lube the O-rings.
2. Screw the cartridge in by hand until the top O-ring is met, then torque to specification.
3. If required, install the valve coil(s) onto the valve stem. Install the coil nut onto the valve stem and torque to specification.
Valve Adjustments - Function Manifold

How to Adjust the System Relief Valve

Perform this test from the ground with the platform controls. Do not stand in the platform.

Be sure that the hydraulic oil level is at the **FULL** mark on the hydraulic tank.

1. Locate the system relief valve on the function manifold (item I).
2. Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to the test port on the function manifold (schematic item A or AA).
3. Chock both sides of the wheels at the steer end of the machine.
4. Remove the platform controls from the platform.
5. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.
6. Press and hold the function enable switch.
7. Move and hold the joystick fully in either direction while observing the pressure reading on the pressure gauge. Note the pressure. Refer to Section 2, Specifications.
8. Turn the machine off. Hold the system relief valve with a wrench and remove the cap (schematic item I or AB).
9. Adjust the internal hex socket. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure.

**DANGER** Tip-over hazard. Failure to adjust the relief valves to specification could result in the machine tipping over, causing death or serious injury. Do not adjust the relief valve pressures higher than specifications.

10. Install the relief valve cap.
11. Repeat steps 5 through 7 to confirm the relief valve pressure.

---

**GS-32 and GS-46**

- a test port
- b system relief valve
- c steer relief valve
- d lift relief valve
How to Adjust the Platform Lift Relief Valve

Perform this test from the ground with the platform controls. Do not stand in the platform.

Be sure that the hydraulic oil level is at the FULL mark on the hydraulic tank.

1. Locate the system relief valve on the function manifold (item I).

2. Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to the test port on the function manifold (schematic item A or AA).

3. Chock both sides of the wheels at the steer end of the machine.

4. Remove the platform controls from the platform.

5. Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

6. Press and hold the function enable switch.

7. Move and hold the joystick fully in either direction while observing the pressure reading on the pressure gauge. Note the pressure. Refer to Section 2, Specifications.

8. Turn the machine off. Hold the system relief valve with a wrench and remove the cap (hydraulic schematic item I or AB).

9. Adjust the internal hex socket. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure.

10. Install the relief valve cap.

11. Repeat steps 4 through 7 to confirm the relief valve pressure.

12. Place maximum rated load into the platform. Secure the load to the platform. Refer to Section 2, Specifications.

DANGER Tip-over hazard. Failure to adjust the relief valves to specification could result in the machine tipping over, causing death or serious injury. Do not adjust the relief valve pressures higher than specifications.
13 Turn the key switch to ground control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

14 Hold the lift relief valve with a wrench and remove the cap (schematic item C or AJ).

15 While activating the platform up function, adjust the internal hex socket clockwise, just until the platform fully raises.

16 Fully lower the platform.

17 Add an additional 50 pounds / 22.7 kg to the platform. Secure the additional weight.

18 Attempt to raise the platform.

- Result: The power unit should **not** be able to lift the platform.

- Result: If the power unit lifts the platform, adjust the internal hex socket counterclockwise until the platform will not raise.

19 Install the relief valve cap.

20 Remove the weight from the platform.

21 **Bleed the hydraulic system by raising the platform to full height.** If the pump cavitates or the platform fails to reach full height, add hydraulic oil until the pump is functioning correctly. Do not overfill the hydraulic tank.

**NOTICE** Component damage hazard. Do not continue to operate the machine if the hydraulic pump is cavitating.
How to Adjust the Steer Relief Valve

Perform this test from the ground with the platform controls. Do not stand in the platform.

Be sure that the hydraulic oil level is at the FULL mark on the hydraulic tank.

1 Locate the steer relief valve on the function manifold (schematic item G or AH).

2 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to the test port (schematic item A or AA) on the function manifold.

3 Remove the platform controls from the platform.

4 Turn the key switch to platform control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

5 Activate the function enable switch and press and hold the steer thumb rocker switch to the right. Allow the wheels to completely turn to the right. Continue holding the switch while observing the pressure reading on the pressure gauge. Note the pressure. Refer to Section 2, Specifications.

6 Press and hold the steer thumb rocker switch to the left. Allow the wheels to completely turn to the left. Continue holding the switch while observing the pressure reading on the pressure gauge.

7 Turn the machine off. Hold the steer relief valve with a wrench and remove the cap (schematic item G or AH).

8 Adjust the internal hex socket. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure.

Component damage hazard. Do not adjust the relief valve pressures higher than specifications.

9 Install the relief valve cap.

10 Repeat steps 5 through 6 to confirm the relief valve pressure.
6-5
Valve Coils

How to Test a Coil

A properly functioning coil provides an electromagnetic force which operates the solenoid valve. Critical to normal operation is continuity within the coil. Zero resistance or infinite resistance indicates the coil has failed.

Since coil resistance is sensitive to temperature, resistance values outside specification can produce erratic operation. When coil resistance decreases below specification, amperage increases. As resistance rises above specification, voltage increases.

While valves may operate when coil resistance is outside specification, maintaining coils within specification will help ensure proper valve function over a wide range of operating temperatures.

Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

Note: If the machine has been in operation, allow the coil to cool at least 3 hours before performing this test.

1 Tag and disconnect the wiring from the coil to be tested.

2 Test the coil resistance using a multimeter set to resistance (Ω). Refer to the Valve Coil Resistance Specification table.

Result: If the resistance is not within the adjusted specification, plus or minus 10%, replace the coil.

Valve Coil Resistance Specification

Note: The following coil resistance specifications are at an ambient temperature of 68°F / 20°C. As valve coil resistance is sensitive to changes in air temperature, the coil resistance will typically increase or decrease by 4% for each 18°F / -7.7°C that your air temperature increases or decreases from 68°F / 20°C.

How to Test a Coil Diode

Genie incorporates spike suppressing diodes in all of its coils. Properly functioning coil diodes protect the electrical circuit by suppressing voltage spikes. Voltage spikes naturally occur within a function circuit following the interruption of electrical current to a coil. Faulty diodes can fail to protect the electrical system, resulting in a tripped circuit breaker or component damage.

**WARNING** Electrocuton/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

1 Test the coil for resistance. See 6-5 How to Test a Coil.

2 Connect a 10Ω resistor to the negative terminal of a known good 9V DC battery. Connect the other end of the resistor to a terminal on the coil.

**Note:** The battery should read 9V DC or more when measured across the terminals.

3 Set a multimeter to read DC amperage.

**Note:** The multimeter, when set to read DC amperage, should be capable of reading up to 800 mA.

4 Connect the negative lead to the other terminal on the coil.

**Note:** If testing a single-terminal coil, connect the negative lead to the internal metallic ring at either end of the coil.

5 Momentarily connect the positive lead from the multimeter to the positive terminal on the 9V battery. Note and record the current reading.

6 At the battery or coil terminals, reverse the connections. Note and record the current reading.

**Result:** Both current readings are greater than 0 mA and are different by a minimum of 20%. The coil is good.

**Result:** If one or both of the current readings are 0 mA, or if the two current readings do not differ by a minimum of 20%, the coil and/or its internal diode are faulty and the coil should be replaced.
Hydraulic Tank

The primary functions of the hydraulic tank are to cool and deaerate the hydraulic fluid during operation. It utilizes internal suction strainers for the pump supply lines and has an external return line filter.

How to Remove the Hydraulic Tank

Component damage hazard. The work area and surfaces where this procedure will be performed must be clean and free of debris that could get into the hydraulic system.

When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

Perform this procedure with the platform in the stowed position.

1. Disconnect the battery pack from the machine.

Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

2. Remove the drain plug from the hydraulic tank and allow all of the oil from the tank to drain into a suitable container. Refer to Section 2, Specifications.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

3. Tag and disconnect the hydraulic tank return hard line from the filter. Remove the hard line from the machine. Cap the fitting on the filter head.

4. Tag and disconnect the hydraulic tank hard line from the pump. Remove the hard line from the machine. Cap the fitting on the pump.

5. Remove the hydraulic tank retaining fasteners and remove the hydraulic tank from the machine.

Yoke and Drive Motor

How to Remove the Yoke and Drive Motor Assembly

When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

1 Block the non-steer wheels.
2 Remove the cotter pin from the wheel castle nut.
   Note: Always replace the cotter pin with a new one when removing the castle nut.
3 Loosen the wheel castle nut. Do not remove it.
4 Center a lifting jack under the drive chassis at the steer end of the machine.
5 Raise the machine approximately 6 inches / 15 cm. Place blocks under the chassis for support.
   **WARNING** Crushing hazard. The chassis could fall if not properly supported.
6 Remove the wheel castle nut. Remove the wheel.
7 Tag, disconnect and plug the hydraulic hoses on the drive motor. Cap the fittings on the drive motor.
   **WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.
   **NOTICE** Component damage hazard. Hoses can be damaged if they are kinked or pinched.
8 Support and secure the yoke assembly to an appropriate lifting device.
9 Remove the retaining fastener from the steer link at the yoke assembly.
   Note: While removing the retaining fasteners, take note of the quantity and location of the spacers when disconnecting the steer link from the yoke assembly.
10 Remove the retaining fastener from the top of the yoke pivot shaft.
   Note: The pivot shaft retaining fastener is located above the main deck.
11 Lower the yoke assembly out of the chassis.
   **CAUTION** Bodily injury hazard. The yoke/motor assembly may fall if not properly supported when it is removed from the chassis.
How to Remove a Drive Motor

1. Block the non-steer wheels.
2. Remove the cotter pin from the wheel castle nut of the motor to be removed.
Note: Always replace the cotter pin with a new one when removing the castle nut.
3. Loosen the wheel castle nut. Do not remove it.
4. Center a lifting jack under the drive chassis at the steer end of the machine.
5. Raise the machine approximately 2 inches / 5 cm. Place blocks under the chassis for support.

**WARNING** Crushing hazard. The chassis could fall if not properly supported.

6. Remove the wheel castle nut. Remove the wheel.
7. Tag, disconnect and plug the hydraulic hoses on the drive motor. Cap the fittings on the drive motor.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

**NOTICE** Component damage hazard. Hoses can be damaged if they are kinked or pinched.

8. Remove the drive motor mounting fasteners. Remove the motor.

8-2 Steer Cylinder

How to Remove the Steer Cylinder

When removing a hose assembly or fitting, the O-ring on the fitting and/or hose end must be replaced and then torqued to specification during installation. Refer to Section Two, *Hydraulic Hose and Fitting Torque Specifications*.

1. Block the non-steer wheels.
2. Remove the pin retaining fasteners from the rod-end pivot pin. Remove the pivot pin.
Note: While removing the pin retaining fasteners, take note of the quantity and location of the spacers when removing the pivot pin.
3. Remove the pin retaining fasteners from the barrel-end pivot pin. Remove the pin.
Note: While removing the pin retaining fasteners, take note of the quantity and location of the spacers when removing the pin.
4. Remove the steer cylinder from the machine.
5. Tag, disconnect and plug the hydraulic hoses from the steer cylinder. Cap the fittings on the cylinder.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

**NOTICE** Component damage hazard. Hoses can be damaged if they are kinked or pinched.
How to Remove the Steer Bellcrank

1. Remove the steer cylinder. See 8-2, How to Remove the Steer Cylinder.

2. Remove the retaining fasteners from the steer links at each end of the bellcrank.

Note: While removing the retaining fasteners, take note of the quantity and location of the spacers between the bellcrank and the steer links.

3. Center a lifting jack under the drive chassis at the steer end.

4. Raise the machine approximately 14 inches / 36 cm. Place blocks under the chassis for support.

   **WARNING** Crushing hazard. The chassis could fall if not properly supported.

5. Turn the yokes to the side so the bellcrank can be removed.

6. Remove the bellcrank from the machine.

Note: While removing the bellcrank from the machine, take note of the quantity and location of the spacers between the bellcrank and the steer links.

Note: Before re-installing the steer bellcrank onto the machine, apply a small amount of Loctite onto the threads of the fasteners. Torque the fasteners to 31 ft-lbs / 42 Nm.
Non-steer Axle Components

9-1
Drive Brake

How to Remove a Drive Brake

When removing a hose assembly or fitting, the fitting and/or hose end must be torqued to specification during installation. Refer to Section 2, Hydraulic Hose and Fitting Torque Specifications.

1 Support and secure the entry ladder to an appropriate lifting device.
2 Remove the entry ladder mounting fasteners. Remove the entry ladder from the machine.

**CAUTION** Crushing hazard. The entry ladder may become unbalanced and fall if it is not properly supported and secured to the lifting device.

3 Block the steer wheels.
4 Remove the cotter pin from the wheel castle nut.

Note: Always replace the cotter pin with a new one when removing the castle nut.

5 Loosen the wheel castle nut. Do not remove it.
6 Center a lifting jack under the drive chassis at the non-steer end.

7 Raise the machine approximately 2 inches / 5 cm. Place blocks under the chassis for support.

**WARNING** Crushing hazard. The chassis could fall if not properly supported.

8 Remove the wheel castle nut. Remove the wheel.
9 Tag, disconnect and plug the hydraulic hose from the brake. Cap the fitting on the brake.

**WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

10 Place a lifting jack under the brake for support.
11 Remove the fasteners that attach the brake to the drive chassis. Remove the brake.

**CAUTION** Crushing hazard. The brake will fall if not properly supported when the mounting fasteners are removed.

Platform Overload Components

11-1
Platform Overload System

How to Calibrate the Platform Overload System (if equipped)

Perform this procedure after confirming that the maximum height limit switch and the limit switch bracket are not damaged and are functioning correctly.

1 Fully charge the batteries and check the hydraulic fluid level.

Note: The hydraulic fluid level must be between the FULL and ADD marks on the hydraulic tank.

2 Apply a thin layer of dry film lubricant to the area of the chassis where the scissor arm wear pads make contact.

3 Chock both sides of the wheels at the steer end of the machine.

4 Turn the key switch to ground control and pull out the red Emergency Stop button to the on position at both the ground and platform controls.

5 GS-1532 and GS-1932: Raise the platform approximately 1.5 m.

6 Using a suitable lifting device, place a test weight, corresponding to the maximum load as indicated on the capacity indicator decal, in the center of the platform floor. Secure the weight to the platform. Refer to the chart below.

<table>
<thead>
<tr>
<th>Model</th>
<th>Load Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>GS-1532</td>
<td>484 kg</td>
</tr>
<tr>
<td>GS-1932</td>
<td>435 kg</td>
</tr>
<tr>
<td>GS-2032</td>
<td>693 kg</td>
</tr>
<tr>
<td>GS-2632</td>
<td>479 kg</td>
</tr>
<tr>
<td>GS-2046</td>
<td>985 kg</td>
</tr>
<tr>
<td>GS-2646</td>
<td>798 kg</td>
</tr>
<tr>
<td>GS-3246</td>
<td>699 kg</td>
</tr>
</tbody>
</table>

7 Apply a piece of tape onto the side of the platform at a point which corresponds to the maximum load position of the capacity indicator decal on the side of the platform.

8 Raise the platform until the position indicator corresponds to the maximum load position of the capacity indicator decal on the platform. Release the toggle switch.

Tip-over hazard. Raising the platform with maximum load above the maximum load position, as shown on the capacity indicator decal on the side of the platform, could result in the machine tipping over, resulting in death or serious injury. Do not raise the platform above the maximum load position of the capacity indicator decal on the side of the platform.

Note: To perform this step, the lift relief valve will need to be adjusted.

9 Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.
10 **Models with round pressure switch:** Remove the retaining ring securing the cover to the pressure switch and remove the cover. Using a flat blade, turn the slotted switch adjustment screw of the platform overload pressure switch into the hydraulic line in 90° increments until the overload alarm does not sound.

**Models with box-shaped pressure switch:** Remove the fasteners securing the cover to the pressure switch and remove the cover. Using a wrench, turn the nut of the platform overload pressure switch into the hydraulic line in 90° increments until the overload alarm does not sound.

Note: To allow the platform overload system to reset, the red Emergency Stop button must be cycled after each quarter turn of the nut or slotted switch adjustment screw.

Note: Turning the nut or slotted switch adjustment screw into the hydraulic line will deactivate the alarm; turning the nut or slotted switch adjustment screw out of the hydraulic line will activate the alarm.

11 Slowly turn the nut or adjustment screw of the platform overload pressure switch out of the hydraulic line just until the overload alarm sounds.

Note: To allow for the platform overload system delay, wait 3 seconds between each quarter turn of the nut or adjustment screw.

12 Turn the nut or adjustment screw one quarter turn into the hydraulic line.

13 Return the safety arm to the stowed position.

14 Using the manual lowering knob, lower the platform to the stowed position and remove all test weight from the platform.

15 Using a suitable lifting device, place a test weight in the center of the platform floor. Secure the weight to the platform. Refer to the chart below.

<table>
<thead>
<tr>
<th>Model</th>
<th>Weight (kg)</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>GS-2646</td>
<td>454</td>
</tr>
<tr>
<td>GS-3246</td>
<td>317</td>
</tr>
</tbody>
</table>

16 Raise the platform to 25 cm less than full height.

17 Lift the safety arm, move it to the center of the scissor arm and rotate down to a vertical position.

18 Raise the platform in 5 cm increments until the overload alarm sounds. Adjust the up limit switch until it actuates just before this point was reached.

19 Install the cover onto the platform overload pressure switch and install and tighten the cover retaining fastener(s). Do not over tighten.

20 Apply Sentry Seal to the fastener(s) securing the cover onto the platform overload pressure switch.

21 Return the safety arm to the stowed position.

22 Using the machine controls, lower the platform to the stowed position and remove all test weight from the platform.

23 Calibrate the lift relief valve. See 6-4, *How to Adjust the Platform Lift Relief Valve.*

Before Troubleshooting:

☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator’s manual on your machine.

☑ Be sure that all necessary tools and test equipment are available and ready for use.

☑ Read each appropriate fault code thoroughly. Attempting short cuts may produce hazardous conditions.

☑ Be aware of the following hazards and follow generally accepted safe workshop practices.

⚠️ **DANGER** Crushing hazard. When testing or replacing any hydraulic component, always support the structure and secure it from movement.

⚠️ **WARNING** Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

⚠️ **WARNING** Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

Observe and Obey:

☑ Troubleshooting and repair procedures shall be completed by a person trained and qualified on the repair of this machine.

☑ Immediately tag and remove from service a damaged or malfunctioning machine.

☑ Repair any machine damage or malfunction before operating the machine.

☑ Unless otherwise specified, perform each repair procedure with the machine in the following configuration:
  - Machine parked on a firm, level surface
  - Platform in the stowed position
  - Key switch in the off position with the key removed
  - The red Emergency Stop button in the off position at both ground and platform controls
  - Wheels chocked
  - All external AC power supply disconnected from the machine
FAULT CODES

About This Section

When a malfunction is discovered, the fault code charts in this section will help a service professional pinpoint the cause of the problem. To use this section, basic hand tools and certain pieces of test equipment are required—voltmeter, ohmmeter, pressure gauges.

General Repair Process

MALFUNCTION DISCOVERED

Part No. 96316
GS-30 • GS-32 • GS-46

Genie

6 - 49
Hydraulic Schematic
GS-2046/2646/3246
(from serial number GS4604-60879 to GS4605-75437)

UPPER LIFT CYLINDER
(GS-3246)

PLATFORM OVERLOAD
(CE MODELS)

LIFT CYLINDER

The lift cylinder orifice is located underneath the fitting on the lift cylinder.

FUNCTION MANIFOLD

POWER UNIT

TANK

10 MICRON WITH BYPASS

1000 to 3500 psi
124 to 241 bar

1000 psi maximum
241 bar maximum

2500 psi
172 bar

0.037" / 0.94 mm

0.059" / 1.17 mm

4 gpm @ 2500 psi
15 L/min @ 172 bar

1800 to 3500 psi
124 to 241 bar

25 psi / 1.7 bar
